lieved to be long extinct then found in 1941-44 growing in China. Comparison with fossil material indicates that it was formerly widely distributed in arctic and temperate regions of Europe, Asia and America. Experiments in growing this tree from the seeds in the open, in northern regions (Alaska and northern Scandinavia) were very successful and now this "fossil plant" is slowly returning to its old territory. **Copy seen:** DLC; MH.

30219. KRISTOFOVICH, AFRIKAN NIKOLAEVICH, 1885- . Iskopaemai el' iz Anadyrskogo kraia. Vladivostok, 1924. 7 p. 2 illus. (U.S.S.R. Geologicheskii komitet. Dal'nevostochnoe otdelenie. Materialy po geologii i poleznym iskopaemym Dal'nego Vostoka, no. 32) 4 refs. **Title tr.:** Fossil spruce of the Anadyr region.

Contains description with Latin diagnosis of the cone of an extinct spruce, *Picea anadyrensis*, sp. nov. Two specimens were found by M. I. Martynov at 48 ft. depth when prospecting for gold in the basin of the Belaya, a tributary of the Anadyr River. Reference is made to related species in North America, and to the finds as evidence of a more temperate climate of northern Siberia in pre-glacial time. Summary in English.

30220. KRISS, A. E. Mikroorganizmy pochv i morei vostochnykh oblastei sovetskoi Arktiki. (In: Vsesoiuznyi geograficheskii s'ezd. 2d, Leningrad, 1947. Trudy, 1948, t. 2, p. 359-67) **Title tr.:** Microorganisms of soils and seas of the eastern part of the Soviet Arctic.

Account of author's microbiological investigation during an expedition of the Academy of Sciences U.S.S.R. in 1938 to Vrangeli Island and its trips to Providence Bay, Cape Dezhnev, Kolyuchin Island and Cape Schmidt. The quantity and species of microorganisms found in various layers of soil in tundras, in sea water and bottom are reported and discussed, with conclusion that, contrary to opinion of some former investigators, the area is rich in various forms of microorganisms, though their anabiotic existence in the permafrost is doubtful.

30221. KRISTJANSEN, WOLMER. Grønland på vej ind i en ny tid. (Dansk arbejde, Feb. 1953. Årg. 44, no. 2, p. 25-26, port.) **Title tr.:** Greenland on the road to a new time.

Contains an interview with A. W. Nielsen, chief of the state-operated Grønlandske Handel (i. e. Greenlandic Trade) as to business prospects in Greenland. Sheep farming, second only to fishery in importance, is now expected to produce an annual yield of 15,000 animals. The packing industry being developed may find an export market. The import of 250 Norwegian live reindeer will help solve a domestic food problem, should the south Greenland sealing fail. North Greenland exported 25,000 seal skins and oil was produced in Denmark from byproducts of whaling. Domestic tanning of skins, fur processing, shoe manufacturing, etc., have good business potentialities. Private enterprise also includes small shops. The main problem for businessmen is the heavy construction cost of storage and housing facilities. The aim of the Grønlandske Handel is to become obsolete, by the evolution of social, cultural and economic conditions which will make Greenlanders independent citizens on a level with the Danes.

Copy seen: DLC.

30222. KRIVOSHEIN, V. U drevnikh ochagov nymylanov. (Vokrug sveta, 1950. no. 1, p. 57-58, illus.) *Title tr.:* At the ancient hearths of the Koryaks.

Contains a sketch of life about a thousand years ago on the Koni Peninsula (Okhotsk sea coast), reconstructed from archeological excavations made by A. P. Okladnikov. Large semi-subterranean dwellings of 10-12 sq. m. with a stone hearth in the middle were discovered, also numerous artifacts of stone and bone and primitive potsherds. The place was inhabited by winter fishers and sea hunters, probably Paleo-Siberians who lived along the coast from the Anadyr' to the Amur. The Tungus formerly lived in the interior and were forest hunters; they reached to the sea and mixed with Koryaks not earlier than in the 16th-17th centuries.

30223. KROEBER, O. Beiträge zur Kenntnis palaearktischer Tabaniden. Teil II: die Untergattung *Theriopectes*

Zell. nebst Bemerkungen zu den mir bekannt gewordenen Bigot'schen Tabaniden-Typen der Collectionen Mr. Collins in Newmarket. (Archiv für Naturgeschichte, 1923, pub, 1924. Bd. 89A, Heft 12, p. 55-118) *Title tr.:* Contributions to the knowledge of palaearctic Tabanidae. Part II: subgenus *Theriopectes* Zell. with notes on Bigot's types of Tabanidae from the collection of Mr. Collins of Newmarket.

Contains a list of 42 species and varieties of horseflies of the subgenus *Theriopectes*, with literature references, tables for the determination of the species (males and females) and descriptions of species (three described as new). At least 15 species native to northern Scandinavia and European and Asiatic U. S. S. R., and one (*Flavipes*) from Labrador are included. A survey of geographic distribution by countries is given, and notes on the type species in the Bigot collection.

Copy seen: MH-Z.

30224. KRÖBER, O. Beiträge zur Kenntnis palaearkt. Tabaniden. Teil III: *Ochrops*, *Atylotus*, *Tabanus* s. str., *Baikalia*, *Isshikia*. (Archiv für Naturgeschichte, 1924. Bd. 90A, Heft 9, p. 1-195) *Title tr.:* Contributions to the knowledge of palaearctic Tabanidae. Part III: *Ochrops*, *Atylotus*, *Tabanus* s. str., *Baikalia*, *Isshikia*.

Contains a critical revision of 141 species of horseflies (deerflies) of the five genera indicated in the subtitle. The species are listed, references given, as well as tables for the determination of species (male and female), descriptions, critical notes, variation and data on geographic distribution by countries for each genera. Five species native to Lapland and a few species from northern regions of European and Asiatic U. S. S. R. are included.

30226. KROHN, JULIUS, 1835-1888. Syrjäniläisiä itkujä; neidon miehelle-anon aikana. (Suomalais-ugrilainen se-ura. Aikakauskirja, 1892. v. 10, p. 1-17) *Title tr.:* Zyryan laments; at a girl's marriage.

Contains Finnish translation of 15 texts. *Copy seen:* InU.

30227. KROHN, KAARLE, 1863-1933. Bärenlieder der Finnen. (*In:* Festschrift, publication d'hommage offerte au P. W. Schmidt. Wien, 1928, p. 401-406) *Title tr.:* Bear songs of the Finns.

Contains an account of the Finnish bear feast and songs. While the Voguls and Ostyaks have performances and games at a bear festival, the Finns and Lapps merely sing songs in turn (Wechselgesänge); the Finnish and Lappish bear songs, however, have no connection with each other in form or content. The Finns cook the whole bear head and make a soup, later the head is scraped of its meat and the skull placed on a sacred tree. Finnish bear songs are known not only among the Karelians of Arkhangel'sk district, but are also found rather frequently in Finland proper.

30228. KROHN, KAARLE, 1863-1933. Lappische Beiträge zur germanischen Mythologie. (Finnisch-ugrische Forschungen, 1906. Bd. 6, p. 155-80, 11 illus.) *Title tr.:* Lapp contributions to the Teutonic mythology.

Contains review of the most important Lapp deities and their names. Conclusion is drawn that the Lapps borrowed from the Scandinavians not merely certain deities or ideas, but their entire mythological system; only worship of the dead and bear worship being indigenous among the Lapps. The magic drum, originally an instrument for attaining ecstasy, became changed among the Lapps to simply a means of divination. Pictures on the magic drums, as illustrated here, show Scandinavian deities. Old Teutonic mythology, therefore, may be studied from among recent Lapps.

30229. Krontiris, A. Experiences with sympathectomy for sequelae of trench feet. (Annals of surgery, Apr. 1947. v. 125, p. 505-507)

Contains a report based on 27 cases. Following operation there was a rise in local temperature; pain and numbness disappeared gradually and hyperhidrosis

vanished. However, ulceration was not alleviated by sympathectomy.

Copy seen: DLC.

30230. KROOK, HJALMAR. Kultala-expeditionen år 1870. (Terra, 1923. v. 35, no. 2, p. 56-65) *Title tr.:* The Kultala Expedition in 1870.

A crown expedition was sent by the Finnish Senate to northern Lappi county in the spring of 1870 to supervise and control the small-scale "gold rush" in progress there after the discovery of gold in the sand of the lower course of the Ivalo River, which flows into Lake Inari. The expedition, the first of its kind in Finland, set up camp on the north side of the river, where it remained for three months until early September. The Crown claimed five percent of the 19,135,194 gold grains found by the approximately 300 diggers and washers during the summer. *Copy seen:* DLC.

map) *Title tr.*: On an expedition to the mouth of Yenisey, undertaken in 1862 under the command of Lieutenant Kruzenshtern.

Contains account of the voyage in Aug.-Sept. with the schooner Ermak (150 tons) and the Norwegian vessel Embrio (17 tons), from the village of Kuya on the Pechora River by Pechorskaya Guba, Yugorskiy Shar and Baydarafskaya Guba as far as Yamal Peninsula (69°57' N.) where the Ermak was caught in the ice. The 27-man party abandoned ship and proceeded overland. Aided by friendly natives, they reached Obdorsk, crossed the Ural Mts., and in November returned to Kuya village (see map). Some hydrographical observations were made in the southern part of the Kara Sea, and data gathered on the mode of life and customs of the Karachei Samoyeds on Yamal Peninsula.

This report was translated into German and published in: Archiv für wissenschaftliche Kunde von Russland, 1865, Bd. 23, p. 107-181, map. The translator (G. A. Erman?) added an extensive evaluation of the results of the expedition, and a review of other expeditions to the northern seas and islands (p. 148-81). *Copy seen:* DLC (Russian and German editions).

30240. KRYLOV, MIKHAIL MIKHAILOVICH. Gidrotermicheskie melioratsii. (Nauka i zhizn', July 1953. t. 20, no. 7, p. 33-35, diags.) *Title tr.*: Hydrothermic amelioration.

Discussion, by a member of the scientific staff of the Permafrost Institute (Institut Merzlotovedeniia), of methods, mostly fantastic, for the improvement of climate by large-scale hydrotechnical construction. Among the schemes mentioned are the turning of the Baltic into a fresh-water sea; the utilization of winter frost for great accumulations of ice, artificial glaciers, to freshen the arid steppes; and the turning of some of the northern waters into fossil ice covered by tundra, etc. *Copy seen:* DLC.

30241. KRYLOV, MIKHAIL MIKHAILOVICH. K teplotekhnicheskomu analizu promerzaniia grunta. (Vestnik inzhenerov i tekhnikov, 1934. No. 20, p. 466-67, graph) 2 refs. *Title tr.*: Thermo-technical analysis of soil freezing.

"The thermal balance of soil is conditioned by heating and cooling, humidifying and drying, and by freezing and thawing of the soil. A mathematical

and graphical analysis of the balance is presented. The heat balance during the year has a value of 18,000 cal./sq. in. for soil with a vegetative or snow cover, and 24,000 cal./sq. in. for bare soil. Most of the heat consumption (60 percent) occurs in the upper layer to a depth of 1.6 m. A large heat consumption is related to moisture changes in the soil due to the high latent heat of evaporation. The heat loss for soil containing 300 kg. water/1 cu. m. by freezing to a depth of 1.5 m. is calculated to be 36,000 cal./sq. in., a value 3-4 times larger than the annual heat balance from temperature changes. Frost penetrating to a depth greater than 2 m. produces conditions favorable for permafrost formation."—SIPRE. *Copy seen:* DLC.

30242. KRYLOV, MIKHAIL MIKHAILOVICH. Ledñanye doma. (Nauka i zhizn', May 1950. t. 17, no. 5, p. 36, port.) *Title tr.*: Ice houses.

Contains description of a method of building cold storage houses of ice: in winter time a frame structure of the desired size and shape is poured repeatedly with water, which freezes gradually to form a thick outer wall of ice; this is covered with an insulating mixture of slag and sawdust. Such ice storage houses can last for decades even in the moderate climate of Moscow, and their cost is only a fraction of that of the conventional cold storage house. The author, a member of the Permafrost Institute and inventor of this method, was awarded the Stalin prize in 1950 for his achievement. Copy seen: DLC.

30243. KRYLOV, MIKHAIL MIKHAILOVICH. Pod ledñanyimi svodami. (Znanie-sila, Apr. 1952. t. 22, no. 4, p. 16-20, illus., col. plate) *Title tr.*: Under the ice vaults.

Autobiographical account of how the author in the course of thirty years' investigations of properties of ice, found a way to produce ice in large quantities quickly by freezing water in winter, and invented a method of building permanent ice storage houses. Construction details, properties of the storage houses with a constant temperature below the freezing point, low construction and maintenance costs, and rapid increase in use of such houses in the U.S.S.R. are related. Poor insulation caused failure with one of these houses at Oymyakon, but others, properly con-

structed have proved successful in much milder climates. **Copy seen:** DLC.

Admitted by the Ministry of Higher Education of the U.S.S.R. as a text-book for higher schools; and edited by V. Ū. Vize.

"Methods of maritime forecasting in

the U.S.S.R. are described. The climatological procedures and the methods of analogy, classification of processes and empirical relations, and their application to forecasting ice régime, water temperature and level variation are discussed. [Basic data for forecasting when the White Sea is clear of ice in the spring are given, p. 96-98]. The ice conditions in the seas surrounding the U.S.S.R. can be divided into four groups [chap. 5, p. 105-166]. The arctic regions are characterized by ice fields throughout the year. The seas of the Far East (except the Japan Sea) are subjected to ice fields up to 10 months. The Baltic and White Seas, and the northern part of the Japan Sea are ice covered up to seven-eight months."—SIPRE. Chap. 7 on forecast of fluctuation of level includes (p. 199-201) data on influence of wind in fluctuation of sea level in the White Sea and at Arkhangel'sk.

30252. KUDRIĀVTSEV, M. N. Snegovyie i lediānye dorogi. (*In* his and A. Ī. Bykov: Avtomobil'nye dorogi. Izd. 2, Moskva, 1949. p. 258-59, diagr.) **Title tr.:** Snow and ice roads.

Brief non-technical account of roads built in the Soviet North of snow packed by rollers, and ice from nearby rivers, lakes, swamps. Such roads are laid in straight lines, have few bridges, are 10-15 m. wide and in the open they are staked. For use by heavy loads, ice roads are built. These have an ice track along the center and two side tracks of rolled snow. Their maximum slopes are one percent, rarely two percent, minimum radius of curves: 200 meters. **Copy seen:** DLC.

30253. KUDRIĀVTSEV, M. P. Materialy po geomorfologii i chetvertichnym otlozheniĭam v basseine reki Bol'shoi Rogovoĭ, Bol'shezemel'skaya tundra. (Moskva. Universitet. Uchenye zapiski, 1946. vyp. 108 (Geologĭa, t. 1, kn. 1) p. 1-34, text map) 30 refs. **Title tr.:** Materials on the geomorphology and Quaternary deposits of the Bolshaya Rogovaya River basin, Bol'shezemel'skaya Tundra.

Contains the results of the author's observations during a geological survey in 1932, sponsored by Northern Geological Bureau. The geography, orog-

raphy and hydrology of the region is described. General data are given on geological structure (morainal, fluvio-glacial, postglacial and recent Quaternary deposits), and on principal features of Quaternary history of the basin of Bol'shaya Rogovaya River (tributary to the Usa, 66°34' N. 60°38' E.) and adjoining areas of Bol'shezemel'skaya Tundra.

30258. KUKKOLA, OLAVI V. Wharf construction problems in Alaskan waters. (In: Alaskan Science Conference . . . 1951. Proceedings, pub. 1953. p. 150-59) 8 refs.

Contains an analysis of the structure of an existing large timber wharf in Alaska (location not given), and a discussion of problems involved in construction. Methods of testing timber below water level are outlined, and treatment of wood against marine-borers indicated. Design for the superstructure is described in some detail, with particular emphasis on load-bearing capacity. A summary of standard and local Alaskan problems in the selection and development of wharf sites is given. **Copy seen:** CaMAI; DLC.

30259. KULAKOVSKIĬ, ALEKSEĬ ELISEEVICH, 1877-1926. Īakutskie posloviťsy i pogovorki. Īakutsk, Īakutskoe gos. izd-vo, 1945. 98 p. (Nauchno-issledovatel'skii institut űazyka, literatury i istorii ĪAASSR). Reprinted without change from *Sakha kűskilű*, pt. 2, 1925. **Title tr.:** Yakut proverbs and proverbial sayings.

Contains 891 proverbs and 110 variants in Yakut and Russian with an introduction and short explanations on the meaning and use of certain proverbs. One third of the material was noted down by the author on his numerous travels throughout Yakutia prior to 1925, and the rest was taken from other collectors. Proverbs are said to be unknown in the districts of Kolymsk, Ust'-Yansk, and Zhigansk.

30260. KULHIA, YRJO. Heparin and sympathetic nerve block in frostbite.

(American Medical Association. Journal, June 6, 1953. v. 152, no. 6, p. 551)

Contains a brief report on two recent cases of severe frostbite (in Finland) in which sympathetic nerve block and intravenous administration of heparin gave excellent results. **Copy seen:** DSG.

30261. KULLING, OSKAR, 1898- Spår av Varangeristiden i Norrbotten; Eokambrika varvskiffer och tilliter i Norrbottensfjällens östra rand, i nordligaste Sverige. Stockholm, 1951. 44 p. illus., 2 text maps, 2 cross-sections. (Sweden. Geologiska Undersökning. Afhandlingar och uppsatser, Ser. C, no. 503, Årsbok 43 (1949) no. 1) 26 refs. **Title tr.:** Traces of the Varanger ice age in Norrbotten; Eocambrian varved shale and tillites on the eastern edge of the Norrbotten mountains in northernmost Sweden.

Contains a description of Eocambrian tillites, resting on earlier Eocambrian or Precambrian rocks, found in the Caledonian mountains of northern Sweden. In the same district varved shales were found connected with the tillites. Samples and thin sections of tillite are shown in photographs. Tillite localities in the Bossekop and Varanger districts of arctic Norway are also noted. The Varanger ice age was world-wide and comparable to the Quaternary in magnitude. Summary in English. **Copy seen:** DGS.

30262. KULSKI, W. W. Soviet comments on international law. (American journal of international law, 1951. v. 45, no. 4, p. 762-70)

30273. KURILOVICH, A. P., and N. P. NAUMOV. Sovetskaiia Tungusiia; Evenkiiskii natsional'nyi okrug Vostochno-sibirskogo kraia. Pod redaktsiei P. G. Zhurid. Moskva—Leningrad, Gos. izdvo Standartizatsiia i ratsionalizatsiia, 1934. 180 p., illus., tables, 9 fold. maps. (Sovet Severa pri Gosplane SSSR. Seriiia ekonomicheskogeograficheskikh ocherkov ralonov Severa SSSR) 105 refs. *Title tr.:* Soviet Tungusiya (Tungus Land); Evenki National District of the East Siberian Province. P. G. Zhurid, editor.

Monographic survey of economic conditions in Evenki National District (60°-69° N. 58°-77° E.) based on extensive literature as well as authors' observations, and richly illustrated with statistical data, maps and photographic text illus.

of physical features, inhabitants and their economic activities. *Contains* 14 chapters on: history; natural conditions and resources; administrative organization; population; hunting industry; reindeer breeding; fishing; mining; forestry; agriculture; roads, transportation, and communication; socialist reconstruction of the Evenki economy; production, consumption, and procurement; scientific research.

Chap. 2 (p. 10-29) gives a geomorphological description of the district, which almost coincides with Nizhnyaya and Podkamennaya Tunguska basins; tabular meteorological and phenological data for several localities; brief characterization of its vegetation, wildlife, industrial minerals and power resources. In chap. 4 (p. 44-56), the population (in 1932: 4,932 persons, composed of 4,071 Tungus or Evenki, Yakuts and Russians) is analyzed as to social and economic status, and culture: implements, clothing, dwellings, food, health conditions, beliefs, remnants of Tungusian shamanism, etc. Chap. 5 (p. 57-79) includes tabular data on hunting implements and catch in 1926-31 in various nomadic regions (soviets) of the district. Chap. 6 (p. 80-91) includes cartographic and tabular data for 1926-32 on distribution of reindeer stock by regions and social groups. *Fold. map* (1:2,000,000) at end indicates the boundaries of the district and its regions, roads and the northern limit of pine and Siberian cedar. *Copy seen:* NNC.

30274. KUSAKA, SENTARO. Über den Einfluss ultraniedriger Temperaturen auf verschiedene biologische Erscheinungen. I. Mitteilung. Einfluss ultraniedriger Temperatur auf fermentative Wirkungen. (Tohoku journal of experimental medicine [Sendai, Japan], Aug. 25, 1944. v. 47, no. 3-4, p. 296-302, table) 12 refs. *Title tr.:* On the influence of very low temperatures on various biological phenomena. Communication no. 1. Influence of extreme cold on fermentative activity.

Contains an account of experiments on the effects of the temperature of liquid air (-196°C.) on the "fermentative" power of rabbit pepsin, diastase and blood-catalase. The first two remained unaffected; that of the last became somewhat stronger after cold exposure. *Copy seen:* DSG.

30275. KUSAKA, SENTARO. Über den Einfluss ultraniedriger Temperaturen auf

verschiedene biologische Erscheinungen. II. Mitteilung. Beeinflussung der Glykolyse durch ultraniedrige Temperatur. (Tohoku journal of experimental medicine [Sendai, Japan], Aug. 25, 1944. v. 47, no. 3-4, p. 303-310, 2 tables) 10 refs. *Title tr.:* On the influence of very low temperatures on various biological phenomena. Communication no. 2. Effect of extreme cold on glycolysis.

Contains a report on the effect of a temperature of -196° on defibrinated blood of rabbits. This temperature caused complete hemolysis without any change in blood-sugar or lactic acid levels. The glycolytic action of exposed blood was completely lost.

Copy seen: DSG.

30276. KUSAKA, SENTARO. Über den Einfluss ultraniedriger Temperaturen auf verschiedene biologische Erscheinungen. III. Mitteilung. Beeinflussung der Gewebsatmung durch ultraniedrige Temperatur. (Tohoku journal of experimental medicine [Sendai, Japan], Aug. 25, 1944. v. 47, no. 3-4, p. 311-18, fig., 2 tables) 25 refs. *Title tr.:* On the influence of very low temperatures on various biological phenomena. Communication no. 3. Effect of extreme cold on tissue respiration.

Contains an account on determinations made on muscle, liver and spleen tissue exposed to the temperature of liquid oxygen (-183°C.). Following exposure, the muscle became elastic; liver and spleen, soft. Tissue respiration fell in all three kinds, but mostly in the spleen, least in the muscle. *Copy seen:* DSG.

30277. KUSAKA, SENTARO. Über den Einfluss ultraniedriger Temperaturen auf verschiedene biologische Erscheinungen. IV. Mitteilung. Beeinflussung der Erregbarkeit der motorischen Nerven und der Adrenalinempfindlichkeit der Pupille durch ultraniedrige Kälte. (Tohoku journal of experimental medicine [Sendai, Japan], Aug. 25, 1944. v. 47, no. 3-4, p. 319-24, fig., table) 16 refs. *Title tr.:* On the influence of very low temperatures on various biological phenomena. Communication no. 4. Effect of extreme cold on excitability of motor nerves and epinephrine-sensitivity of pupils.

Contains a report on the effects of a temperature of -183°C. on the *N. ischiadicus* and on the pupil of the frog. Following exposure the excitability of this nerve is greatly reduced; the pupil first shows slight miosis, changing gradu-

ally to mydriasis which remains constant. Adrenalin slows down markedly the appearance of mydriasis.

Copy seen: DSG.

30278. KUSAKA, SENTARO. Über den Einfluss ultraniedriger Temperaturen auf verschiedene biologische Erscheinungen. V. Mitteilung. Einfluss ultraniedriger Temperaturen auf Herz und Gefäße. (Tohoku journal of experimental medicine [Sendai, Japan], Aug. 25, 1944. v. 47, no. 3-4, p. 325-33, 5 fig., 4 tables) 3 refs. **Title tr.:** On the influence of very low temperatures on various biological phenomena. Communication no. 5. Effect of extreme cold on the heart and blood vessels.

Contains a study of the changes in the cardiovascular system of frogs, exposed for four seconds to a temperature of -183°C . The observations were made after the animals were thawed and began to swim again. The apex of the heart is thickened and does not participate in the heartbeat; the frequency of heartbeats remains unchanged, but their amplitude is much reduced; the sensitivity of the heart toward adrenalin and acetylcholine remains unaltered, but is reduced towards G-strophanthine and toward calcium. The lumen of the peripheral vessels is narrowed, and contraction in response to adrenalin somewhat slowed down.

Obituary of the German-Russian naturalist-lepidopterist, noting briefly his education in Germany, activities as custodian of the Lepidoptera collection of Grand Duke Nikolai Mikhailovich (1883-1900), and zoologist of Zoological Museum of the Russian Academy of Sciences (1900-1905). His extensive travels (in northern Siberia, Kamchatka, etc.) and scientific work in the fields of lepidopterology, zoology and ethnography, also his achievement in exhumation of Berezovka mammoth (1901). Appended is list of his (26) publications.

30287. KUZNETSOV, N. M. Sovremennoe sostoianie i perspektivnyi plan proizvodstva rybnykh zapasov na 1951-1953 gg. po Severnomu upravleniiu (Sevrybvod). (Leningrad. Universitet. Vestnik, Aug. 1950. t. 5, no. 8, p. 80-92, diagr., table) **Title tr.:** The present situation and a tentative plan for reproduction of fish resources for 1951-1953 in the area of the Northern Administration of Fisheries.

The Administration's jurisdiction covers Barents, White and Kara Seas, rivers with a total length of ninety thousand km. and some 2,500 lakes. The number of fish species is: 115 in Barents Sea, 44 in White Sea, 32 in Kara Sea, 36 in Severnaya Dvina and Pechora Rivers, and 28 in Mezen' and Onega Rivers. In 31 rivers of the area, all fishing is prohibited throughout the year. Three piscicultural farms (hatch-

eries) are working on reproduction of salmon. The difficulties, defects and prospects of the fisheries and hatcheries are discussed in detail; measures for better protection of fish resources and better methods of their reproduction (planned for 1951-53) are noted. The paper was delivered to the Conference on reproduction of fish resources, held in Leningrad in March 1950.

30291. KUZNETSOV, V. V., and T. A. MATVEEVA. Vliianie plotnosti poselenii na nekotorye biologicheskie protsessy v prirodnykh populatsiakh *Balanus balanoides* (L.) na vostochnom Murmane. (Akademiia nauk SSSR. Doklady, 1949. nov. seriia, t. 64, no. 3, p. 413-15)

Title tr.: Influence of the population's density on some biological processes in natural populations of *Balanus balanoides* (L.) on the eastern Murman.

The results of the study are represented in three tables: (1) shows the average dimensions of individuals in various age groups (1-12) of this barnacle in three localities on the eastern Murman coast. Table 2 presents content of calcium and organic matter in the body of *Balanus* in groups of various density. The productivity of individuals of various age groups and of varied population density within the groups is shown in table 3.

30297. LA FOND, EUGENE CECIL, 1909- and D. W. PRITCHARD. Physical oceanographic investigations in the eastern Bering and Chukchi Seas during the summer of 1947. (Journal of marine research, July 1952. v. 11, no. 1, p. 69-86, 17 diagrs.) 5 refs.

"During a familiarization cruise on the USS *Nereus* to the Bering and Chukchi Seas in the summer of 1947, geological, biological, and physical investigations of the sea floor and water were undertaken by oceanographers from the U. S. Navy Electronics Laboratory and the Scripps Institution of Oceanography. This paper reports studies of the physical properties of sea water."

A vertical series of temperature, salinity and other oceanographic observations were taken four times daily in shallow areas of Bering and Chukchi Seas; 39 such stations were north of the Aleutian Islands, 22 of these in Chukchi Sea. New information on the physical properties of the waters is discussed: temperature and salinity, density, dynamic topography and currents. "In summer, the water masses of this area are complicated by the circulation and advective processes. In general, the southern Bering Sea water flows northward and is modified by warm low-salinity water from rivers along the Alaskan coast and from intrusions of cold high-salinity water from the western Bering Sea. This mixture of water funnels through the Bering Strait prin-

cipally at the surface on the eastern side. In the Chukchi Sea, this water continues northward, tending to follow the Alaskan coast, turning into Kotzebue Sound, and then heading around Cape Lisburne toward Point Barrow. Other water masses occur in the central Chukchi Sea opposite Kotzebue Sound and north of 70° latitude. Near the arctic ice pack boundary, unusual stratification of the water occurs, with subsurface temperature maximums in the form of tongues or pockets. This phenomenon is probably caused by mixing of water from melting ice cakes with the advected higher-salinity water from the Bering Strait."—Authors' abstract. **Copy seen:** DLC.

30298. LAGERCRANTZ, ELIEL, 1894—. Sprachlehre des Südlappischen nach der Mundart von Vefsen. Kristiania [Glückstadt und Hamburg, Druck von J. J. Augustin] 1923. xi, [1], 171, [1] p. (Kristiania. Etnografiske museum. Bulletin 1) **Title tr.:** A grammar of South Lapp on the basis of the Vefsen dialect.

The author gathered the material for his study of the syntax, morphology, and phonetics of a South Lapp dialect in the parish of Vefsen, Norway, during the summer of 1921. The Vefsen dialect is spoken by about 100 persons in the Vefsen-Bindalen area, which includes Mosjøen (65°30' N. 13°5' E.) and Hatfjelldalen (65°25' N. 12°30' E.). The Lapp population of the region is dying out. The Vefsen dialect belongs to the northern dialects of South Lapp and differs considerably from those spoken in Sweden. The dialect itself is divided into northern and southern sub-dialects. **Copy seen:** DLC.

"Five formulas are introduced for the determination of load-carrying capacities of ice. Lebedev's and Korunov's formulas consider the ice thickness only and vary in regards to the constant. The formulas of the Red Army's Engineering Commission for drawn and wheeled loads consider the temperature coefficient as well as ice thickness and the conversion constant. Zubov's formula introduces three corrective coefficients, temperature, load road clearance, and ice salinity. A safe crossing of a 3.5-ton truck requires a minimum ice thickness of 15 cm., according to Lebedev and 19 and 22 cm. respectively according to Korunov and Zubov. A 49-ton tank requires an ice thickness of 54 cm. according to Lebedev, 70 and 69 cm. respectively according to Korunov and Zubov. The foregoing calculations disregard the condition of the ice cover."—SIPRE.

Contains study of rocks on the northern part of the island of Tromsø, Norway. Amphibolite rocks are penetrated by oligoclase dikes, the dike rock consisting of acid plagioclase with minor amounts of hornblende, and lacking in quartz. Similar plagioclase dikes containing some quartz also occur. Detailed description of rock samples and optical analyses indicate that the dikes are the product of magnetic intrusion and are not due to *in situ* enrichment of the gabbro magma from which the amphibolites were formed. Granitization processes in the western part of the region during the Caledonian (late Silurian-early Devonian) enriched in silica the magma from which the quartz-bearing dikes were formed.

Contains an account of experiments with rats fed a diet containing graded amounts of protein and exposed to an environmental temperature of 0° to -2° C. Body temperature and survival time were recorded. Cold resistance (as measured by survival time) increased with protein intake, up to the point when the caloric value of the protein reached 9 percent of that of the diet. See under W. Grab and K. Lang for the second part of this study.

Contains an account of experiments with rats kept at a temperature of 0° C. and on a diet containing fat to the amount of 10-50 percent of the total caloric intake. The cold resistance of the animals decreased with the increase of the fat content in the food. This peculiar behavior is explained by the assumption that energy production from fat is too slow to meet the highly increased energy requirements during cold exposure. **Copy seen:** DSG.

30322. LANG, KARL, and W. GRAB. Kälteresistenz und Ernährung, 4. Einfluss des Vitamin C auf die Kälteresistenz. (Klinische Wochenschrift, Oct. 15, 1946. Jahrg. 24-25, Heft 1-4, p. 40-41) **Title tr.:** Cold resistance and nutrition, 4. The influence of vitamin C on resistance to cold.

Contains a report on experiments with guinea pigs. Their resistance to cold was considerably lowered when kept on a vitamin C deficient diet. On the other hand, a tenfold increase of vitamin C administration above the normal, did not appreciably raise their normal resistance to cold. **Copy seen:** DSG.

LANG, KARL, see also Grab, W., and K. Lang. Kälteresistenz u. Ernährung, 2, Einfluss Vit. A u. B. 1944. No. 29358.

30323. LANGE, KURT. The effect of cold on capillary permeability; preliminary report. (New York Medical College. Bulletin, Dec. 1942. v. 5, no. 4, p. 154-62) 14 refs.

Contains a study of capillary permeability in man, rabbit and dog, as shown by fluorescein. Exposure of skin to 10° C. for ten minutes produced a marked decrease of permeability and dilatation of capillaries; capillary dilatation was found not to be due to arteriolar spasm. Decrease of capillary permeability during cold exposure also occurred in limbs with afferent and efferent nerve fibers interrupted. Decreased capillary permeability as seen in the cooled skin, could not be demonstrated in capillaries of the mesentery and intestine.

Copy seen: DSG.

30324. LANGE, KURT, and others. Factors influencing resistance to cold environments. (Army medical bulletin, Nov. 1948. v. 8, p. 849-59, diagrs., tables) Bibliographical footnotes. **Other authors:** M. M. A. Gold, D. Weiner, and M. Kramer.

Contains an account on experiments with rabbits, exposed to an environmental temperature of -20° C. under various conditions; when restricted in movement they showed a markedly shortened survival time and could not maintain a normal body temperature even in the first few minutes of exposure; similarly superficial anesthesia resembling sleep, produced a much more rapid drop in temperature than found in controls; inebriating doses of alcohol reduced survival time; treatment with thyroid hormone prolonged survival time and suppression of thyroid function shortened it. **Copy seen:** DLC.

30325. LANGE, KURT, and others. Frostbite; physiology, pathology, and therapy. (New England journal of medicine, Sept. 1947. v. 237, no. 11, p. 383-89, 7 fig.) 17 refs. **Other authors:** D. Weiner, and L. J. Boyd.

Contains an account representing largely a review of the authors' earlier work. They found that gangrene and tissue loss in frostbite are caused by occlusion of capillaries by masses of stuck-together erythrocytes; heparinization of animals prevented formation of red cell masses and gangrene, and similar results were obtained in 15 human volunteers and in two actual cases of severe cold exposure. **Copy seen:** DLC.

30326. LANGE, KURT, and others. Prerequisites of successful heparinization to prevent gangrene after frostbite. (Society for Experimental Biology and Medicine. Proceedings, May 1950. v. 74, no. 1, p. 1-4, table) 12 refs. **Other authors:** L. J. Boyd, and D. Weiner.

Contains a discussion of earlier work on heparinization by the present authors and others; and account of further experiments, indicating that if prevention of gangrene after frostbite is to be successful, coagulation time by heparin injections or infusions has to be *uninterruptedly* prolonged for at least five days after exposure. Even brief interruptions lead to a rapid increase of failures. **Copy seen:** DLC.

30331. LANTIS, MARGARET, 1906- Note on the Alaskan whale cult and its affinities. (American anthropologist, 1940. v. 2, p. 366-68) 3 refs.

Contains Aleut material, omitted in the author's paper *The Alaskan whale cult and its affinities*, 1938 (*Arctic Bibliography*, No. 9672): the use of human remains, imitation of the whale and bathing in the sea, the use of the special hut, and the requirements of the hunter's wife. Additional material on Unalaska Island was taken from Veniaminov's *Zapiski*, 1840 (*Arctic Bibliography*, No. 18650), and new material on customs on St. Lawrence Island from Dr. H. B. Collins.

Copy seen: DLC.

30332. LANTIS, MARGARET, 1906- Nunivak Eskimo personality as revealed in the mythology. (Alaska. University. Anthropological papers, 1953. v. 2, no. 1, p. 109-174, 7 tables) 24 refs.

A psychological study based on analysis of sixty myths and tales, published in the author's *The social culture of the Nunivak Eskimo*, 1946 (*Arctic Bibliography*, No. 9675), and in Hans Himmelheber's *Der gefrorene Pfad*, 1951 (*Arctic Bibliography*, No. 22624). An example of the analysis is given (p. 170-73). Most of the stories analyzed may be classified as myths. They deal with the supernatural, the mysterious. There seem to be two principal moods: yearning, wishing; and uneasiness, fear. Particular local devices for personal expression were especially looked for. The task set was to learn how to interpret folklore in emotional depth as well as in occurrence in different people, groups of people and regions, that is, vertically as well as horizontally. Conflict-situations (themes), and the personality (types of characters), are discussed. Comparison is made with personality as revealed in Rorschach tests. Nunivak is compared with other Alaskan Eskimo mythologies. Themes and personality types wide-spread in Eskimo mythology are surveyed. Agreements and differences between narratives of Himmelheber's and the author's collections are noted. No attempt has been

made to analyze the personalities of narrators. **Copy seen:** CaMAI; DLC.

30333. LANTIS, MARGARET, 1906- . Opportunities for sociological research in Alaska. (American sociological review, Dec. 1953. v. 18, no. 6, p. 666-69)

Contains an outline of near-sociological studies made in Alaska by Federal or Territorial workers, human geographers, and social anthropologists; and a list of general problems needing immediate attention. Studies should be made of: (1) the spontaneous, unplanned American settlements; (2) formal social structures; (3) the American emigrant; (4) the various ethnic groups; (5) ecology; and (6) description of the new culture. More specific problems are noted as examples under each heading. The cost and other difficulties of research in Alaska are briefly mentioned.

30337. LAPPO, S. D. Let's do a better job of ice-forecasting. Ottawa, 1950. 7 p. (Canada. Defence Research Board. Scientific Intelligence Division. April 26, 1950) Translation by E. R. Hope of Lappo's *U'uchshil' delo ledoykh prognozov* 1938 (Arctic Bibliography, No. 9690).

Contains a discussion of ice-forecasting along the Northern Sea Route, U.S.S.R. Observations initiated in 1932 are criticized as being inefficiently carried out in 1938 and not adapted to the Laptev or East Siberian Seas. Eight specific measures of improvement are indicated in detail: a study of (1) Gulf Stream and Atlantic Currents, (2) characteristics of, (3) and ice boundary in, the arctic seas; (4) air reconnaissance of ice conditions in navigation season; (5) collection of ice data by ships operating in the Arctic Basin; (6) establishing a polar station on the northern tip of Kotel'nyy Island; (7) collection of detailed meteorological data for 18 specific stations and from ships in the Arctic Basin; and (8) compilation of synoptic charts. The importance of training ice pilots is noted, and the use, form, and editing of ice-forecasts, the ten-day weather bulletin, and hydrological forecasting are considered. Author stresses the study of, and hydrographic forecasts for, the northern Siberian rivers whose run-off has direct bearing on ice conditions during the Northern Sea Route's navigation season.

(Geodezist, 1940. god 16, no. 10, p. 50-52) **Title tr.:** On the problem of the "white spots" in the representation of relief on the map of the U.S.S.R., scale 1:1 million.

In the preparation of this new comprehensive map, the representation of areas as yet unexplored ("white spots") was a major problem. The practice of filling in these "white spots" with hypothetical relief data assembled from isolated altitude determinations, descriptions in the literature, and information from inquiries, etc., is described. For example only 20 percent of the area represented by sheet 0-48 of the map in Yakut A.S.S.R. has been actually surveyed and that mainly in the great river valleys. For the forest region of Yakut A.S.S.R., the only existing map is that compiled in 1932 by the Academy of Sciences U.S.S.R., and edited by Kozhevnikov, scale 1:2 million.

Title tr.: The local use of follicular ointment in the treatment of first and second degree frostbite.

Contains an account on the physiology and pathology of frostbite; the author's and other work on the vasoactive properties of folliculin, and the beneficial effect of ointment containing folliculin or synthetic estrogenic substances.

Copy seen: DSG.

30342. LARSEN, HELGE EYVIN, 1905- . Archaeological investigations

in Alaska since 1939. (Polar record, Jan. 1953. v. 6, no. 45, p. 593-607, map) 16 refs.

Contains a review, discussion and evaluation of the two most recent phases in Eskimo archeological investigations, viz., that based on the Ipiutak culture, discovered by excavations at Point Hope, and that centering on the Denbigh Flint Complex disclosed at Cape Denbigh; the most significant finds are listed, their outstanding characteristics discussed and comparisons with other cultures both Eskimo as well as Indian and Euro-Asiatic drawn; radiocarbon and tree-ring dating is quoted to coordinate the relationship and time sequence of the various cultures, and their variants. The account is preceded by a brief survey of two earlier phases in Eskimo archeology: that concerned with the Thule Culture and that of the Old Bering Sea culture.

Copy seen: CaMAI; DLC.

30343. LARSEN, HELGE EYVIN, 1905- . The Ipiutak culture and its position within the Eskimo culture. (International Congress of Americanists. 28th, Paris, 1947. Actes. Paris, 1948. p. 419-21)

Contains a summary report on the discovery of Ipiutak culture at Point Hope, Alaska, and excavations made in 1939-41 by J. L. Giddings, F. G. Rainey and the present author, representing the University of Alaska, the American Museum of Natural History and the Danish National Museum. About 10,000 specimens from 72 house ruins and 150 burials were brought back. The Ipiutak house, and two types of burial are described. The material culture of the Ipiutak people was based upon the hunting of seal, walrus, and caribou; their principal weapons, the bow and arrow and the Eskimo harpoon; no weapons for whale hunting, nor traces of boats and sleds were found; most of the tools are made of chipped flint. Schematic human faces with tattoo marks and animal heads were the favorite motives of Ipiutak art. The spiritual culture of this people was similar to that of the modern Eskimo and the boreal peoples of Eurasia. Ipiutak culture probably originated in Asia, its place of origin is the tundra around the Yamal Peninsula and the estuaries of the rivers Ob' and Yenisey. The Alaskan Ipiutak site probably dates back to the

first centuries of the Christian era. The Eskimos form the eastern branch of an ancient circumpolar hunting culture, which has its roots in the epi-paleolithic cultures of the Old World. Ipiutak culture belongs to the Palae-Eskimo complex. For a full report on results of this party's work in 1939-41, see *Arctic Bibliography* No. 9705.

Copy seen: DLC.

30344. LARSEN, HELGE EYVIN, 1905- . The Ipiutak culture: its origin and relationships. (International Congress of Americanists. 29th, *New York*, 1949. Selected papers, v. 3, *Indian tribes of aboriginal America*, Chicago, 1952. p. 22-30)

Contains characterization of a Paleo-Eskimo culture, discovered at Point Hope, Alaska, in 1939 by the writer and others. At a place called Ipiutak, 72 house pits were excavated. The forms of unearthed dwellings, a well-developed flint industry, art, implements, the finds in the graves, etc., are described. The absence of lamps and cooking pots indicates that Ipiutak was not a permanent village but inhabited only during the spring and summer; in winter, the people traveled inland and hunted caribou. Ipiutak culture is considered by the author as very old, and of West Siberian origin; it is compared with other finds made at the Cape Denbigh, Kachemak Bay, and the Kuskokwin-Bristol Bay. The paper is a summary of author's larger work *Ipiutak and the Arctic Whale Hunting Culture*, 1948 (*Arctic Bibliography*, No. 9705). A discussion follows (p. 30-34), by D. Jenness, who does not agree that Ipiutak may have been the earliest Eskimo culture in America, that from it came all later ones; cultural influences from China and the North Pacific Coast seem to him more probable than from western Siberia.

Copy seen: DLC.

30345. LARSEN, HELGE EYVIN, 1905- . Point Hope expedition; Danish and American scientists cooperate in studying Alaska Eskimos. (*American-Scandinavian review*, Sept. 1940. v. 28, no. 3, p. 210-22, 10 illus.)

Contains popular account of an archaeological expedition with F. G. Rainey and L. Giddings, to Point Hope, northwest Alaska in 1939. The life of the present Eskimo inhabitants (only 250 persons, many of them cross-breeds), is described, also their former culture

based on whale hunting. The party's archeological investigations are sketched, and their discovery of objects belonging to a hitherto unknown form of Eskimo culture, subsequently called Ipiutak culture. For scientific results of the expedition see *Arctic Bibliography*, No. 9705.

30346. LARSEN, KNUD. Laks og laksefiskeri, særlig i Danmark, Sverige og Norge. Lystfiskeriet af Axel Svendsen. København, J. F. Clausen, 1950. 123 p. illus., tables, maps **Title tr.:** Salmon and salmon fishing, particularly in Denmark, Sweden, and Norway. [With a chapter on] sport fishing by Axel Svendsen.

The life history of the salmon, its distribution in Scandinavian waters, and differences between it and the trout are discussed. Remedies are suggested for saving the salmon stock from the threat to its survival posed by modern fishing methods and industrial river regulations. Important salmon rivers in northern Scandinavia are the Lule, Kemi, Tornio, and Oulu, all flowing into the Gulf of Bothnia between 65° and 66° N. Also mentioned are the Elliðaár in Iceland and the Kapisigdlit River in Greenland.

Sitzungsberichte, 1934, pub. 1936. p. 18-20) **Title tr.:** Report on investigations made in 1933 under the leadership of Anthropological Commission of the Finnish Academy of Sciences.

Includes notes on an anthropological survey in Lapland: two physicians (V. Lassila and T. Y. Roschier) and four students made a medical and anthropological investigation of about 200 Lapps of Petsamo and Inari. In all, about 3,000 Finnish Lapps have been surveyed. Skeleton finds were also investigated.

Copy seen: DLC.

30348. LATHE, G. H., and R. A. PETERS. Some observations on the comparative effects of cold and burns on protein metabolism in rats. (*Quarterly journal of experimental physiology*, Mar. 1949. v. 35, p. 55-64, 6 tables) 9 refs.

Contains a report on the effects of cold combined with burns and/or methionine, on nitrogen excretion of the rat. Cold

and burns produced an increase in nitrogen excretion within 24 or 48 hours. In two of the experiments, the effect was not additive; in one at a lower temperature, burning increased the N-loss. A methionine supplement did not reduce excess nitrogen excretion due to cold, or due to cold and burning.

30349. LATIMER, JOHN W. Postwar aspects of the trench foot problem. (Medical clinics of North America, post-war medicine. Philadelphia, Saunders, Mar. 1946. v. 30, p. 421-29) 21 refs.

Contains an account based largely on the author's experience with 250 cases; emphasis is on the post-hyperemic stage. Includes sections on military aspects, and kinds of cold injuries; pathology of trench foot at its various stages; symptoms; treatment at the post-hyperemic stage. The pathological findings suggest that the symptoms of the late stage are due to nerve degeneration and regeneration, and muscle atrophy and fibrosis rather than to injury of the blood vessels.

Copy seen: DLC.

30350. LATKIN, NIKOLAI VASIL'EVICH, 1833-1904. Eniseiskaja guberniâ, eâ proshloe i nastoiâshee. S.-Peterburg, Tip. V. A. Tikhanova, 1892. ii, iii, 467 p., tables. *Title tr.:* The Yeniseysk Government, its past and present.

A monographic description of area. Successive chapters deal with its limits (approx. 52°20'-77°33' N. 112°-128° E.), hydrography of its seacoasts, rivers (Pur, Taz, Pyasina, Taymyr, Khatanga, Anabar, Yenisey with its tributaries, Verkhnyaya and Nizhnyaya Tunguska and others), and its lakes (p. 3-68); its geology and soils, climate; flora and fauna; population and movements, with statistical data for 1861-88; agriculture; cattle, reindeer and dog breeding and poultry raising; fishing and hunting; gold mining (p. 182-253); industries and trades, commerce; taxes and finances; education, health conditions (p. 290-99), administrative divisions and history of colonization; administration and principal events, from the foundation of Mangazeya in the 17th century till 1888 (p. 392-466). Chap. 7 (p. 122-44) deals with the aboriginal natives of the

region: Tungus, Ostyaks, Samoyeds, Yakuts, Dolgans and others. Their way of life and present situation are sketched: their numbers, occupations, customs, etc. Some details are given on the reindeer industry among the Ostyaks, Samoyeds, Tungus, Dolgans and Yakuts in the Turukhansk district (p. 167-69); use of dogs as draft animals (p. 169-70).

Contains a comprehensive report on an apparently unprecedented case of survival, following very deep hypothermia with extensive frostbite. The patient, a negro woman of 23, showed at, and soon after, admission to the hospital, a respiratory rate of 3-5 per minute, apical pulse rate 12-20 per min.; blood pressure: zero; rectal temperature, at a depth of 13 cm.: 18° C. (64.4° F.), and extensive regions of the body, including eyeballs, hard frozen. A detailed account of further observations, tests, examinations, analyses, etc. made at close intervals during the hypothermic period (which lasted about 20 hours following admission) and during the immediate post-hypothermic period, is presented together with an account of the therapeutic measures taken. Post-hypothermic sequelae and therapy are presented summarily. A discussion of the case, therapy, the fact that the patient was deeply inebriated and very lightly dressed when she became frozen, etc., is included.

30352. LAURITZEN, V. En ny æra i Grønlands-farten. DDL's Grønlands-flyvninger i 1949. (Grønlands selskab. Årsskrift, 1950, p. 30-40, illus.) *Title tr.:* A new era in Greenland communication. Greenland flights in 1949 by DDL [The Danish Air Lines].

Danish air service to Greenland is described, as made possible by cooperation of the Americans, and use of their base, Bluie West One at Narsarsuaq, southwest Greenland. From this base flights to the principal settlements in Greenland are possible. The importance of air travel in hospital service, rescue work, supply and passenger transportation is illustrated by the fact that an 8-9 day journey is achieved in a 9 hr. flight. Flying is possible at least three quarters of the year, domestic flights, however, are limited by the local meteorological conditions. *Copy seen:* DLC.

Pathology and therapy of frostbite; the technique of blockade applied; case histories (three) of military personnel studied, and the results obtained.

Copy seen: DSG.

30354. LAVRENKO, EVGENIĬ MIKHAIĬLOVICH, 1900- . Sostav pyl'itsy i spor v sovremennykh otlozheniakh razlichnykh zon v predelakh Evropeiskoi chasti SSSR. (Priroda, 1943, no. 3, p. 65-66). *Title tr.:* The pollen and spore content of contemporary deposits of various zones of the European section of the U. S. S. R.

Contains statistical analysis of pollen of various trees, shrubs and herbs, and of spores of mosses and lichens found in contemporary deposits in tundra and forest-tundra zones of European U. S. S. R. Based chiefly on recent works on spore-pollen analysis of Soviet botanists.

Copy seen: DLC; MH.

30355. LAVRENKO, EVGENIĬ MIKHAIĬLOVICH, 1900- . Vozrast botanicheskikh oblastei vnetropicheskoi Evrazii.

(Akademiia nauk SSSR. Izvestiia. Seriia geograficheskai, 1951. no. 2, p. 17-28, map) 28 refs. *Title tr.:* The age of the botanical provinces of non-tropical Eurasia.

The area is tentatively divided into eleven provinces and the ancient phytogeography of each discussed. Among conclusions: the vegetation of the three northerly provinces (taiga, North-Pacific meadow (including Kamechatka), and arctic tundra) are of relatively recent date and were formed in Quaternary (Pleistocene) period. *Copy seen:* DLC.

30356. LAVROV, N. P. Itogi i perspektivy akklimatizatsii ondatry v SSSR. (Priroda, 1945, no. 6, p. 68-69) *Title tr.:* Results and perspectives of the ondatra's acclimatization in the U. S. S. R.

Contains a review of the acclimatization of the muskrat *Ondatra zibethica* in the U. S. S. R., initiated on a small scale in 1928. Since that time 47,000 (2,500 from the United States, England and Finland) have been released in more than 500 localities within the general area 43°-70° N. 29°-139° E. The ondatra yields a valuable fur, its meat is edible, and its musk might be used in the perfume industry. *Copy seen:* DLC; MH.

R., and the influence of environmental conditions on its characteristics.

Contains a retrospective summary of the acclimatization of this muskrat, introduced into the U. S. S. R. in 1928 from Canada, Finland and England, and now distributed in all the northern and central regions of the country. A study of the skulls and skins from various regions, including the Arkhangel'sk province, Kola Peninsula and Yakutia, was carried out in 1952, and the results are incorporated in the table on p. 747. It is concluded that the changes in the skull structure are rather small, but the characteristics of the skin and fur are changing much faster. *Copy seen:* DLC; MH.

30361. LAWRENCE, DONALD BUERMANN, 1911- . Glacier fluctuation in northwestern North America within the past six centuries. (International Geodetic and Geophysical Union. Association of Scientific Hydrology. General Assembly, Brussels, 1951, pub. 1952? t. 1, p. 161-66, sketch map, diagr.) 21 refs.

Contains a study of the recessional history of the Herbert Glacier which

proceeds from the Juneau Ice Field, Southeast Alaska. Field work was carried on in July 1950 as part of the American Geographical Society's Juneau Ice Field Research Project. Vegetation and periglacial terrain features were studied and a series of recessional moraines dated by botanical methods. Limitations of the technique used are discussed. Comparisons are made between behavior of Herbert Glacier and those of other parts of Alaska, British Columbia, Oregon, Norway, Iceland, and East Greenland. It is concluded that "a strong glacier advance attained its maximum in the first half of the eighteenth century and that this event constituted the maximum advance within the past six centuries." The "apparent correlation" between the formation of the recessional moraines and troughs of the sunspot cycle is discussed.

30362. LAWRENCE, DONALD BUERMANN, 1911- , and J. A. ELSON. Periodicity of deglaciation in North America since the Late Wisconsin maximum. (Geografiska annaler, 1953. Årg. 35, häft. 2, p. 83-104, illus., 2 sketch maps, 2 tables) 66 refs.

Contains discussion of glacial recession primarily during the past 200-250 years. Part 1 concerns glaciers of southeastern Alaska (with particular emphasis on Herbert Glacier) where the study was part of the Juneau Ice Field Research Project. From sets of multiple moraines between the position of maximum advance in mid-18th century to the present ice front, it is seen that the horizontal recession rate has not been uniform. Relation is discussed (1) between rate of recession, length of period between moraines, and size of moraines, and (2) between glacier periodicity and changes in solar energy with observations on length of the "little ice age." Part 2 concerns recession over the prairie provinces of Canada. **Copy seen:** DGS.

Narrative, with excerpts from his diary, of the author's stay during 1913-1916 with several Eskimo tribes west and northwest of Hudson Bay, studying their mode of life, customs and habits. Traveling with the natives by boat and dog-sledge, he visited and lived in the coast regions north of Churchill, between the Ferguson River and Chesterfield Inlet, and on the shores of Roes Welcome Sound; he made a trip to the northwestern part of Southampton Island and another to the Eskimos of the interior (see map). His travel experiences and adventures are recounted with many ethnographical notes on Eskimo hunting, food and famines, their traveling and camping habits and tech-

niques, their dwellings, family life, customs and beliefs, ethics and relations with the whites. Eskimo tools and utensils are sketched (16 text illus.). The chapter on hygiene (p. 250-54) mentions fresh-air baths, describes Eskimo clothing and its eminent suitability to the arctic environment. Primitive music is discussed with particular references to that of the Eskimos, and five melodies from the author's phonograph records are appended (p. 264-78).

30372. LEEM, KNUD, 1697-1774. Beskrivelse over Finnmarks Lapper, deres tungemaal, levemaade og forrige afgudsdyrkelse . . . med J. E. Gunneri . . . anmærkinger; og E. J. Jessen-S. . . afhandling om de norske Finners og Lappers hedenske religion. København, G. G. Salikath, 1767. 7 p. l., 15, [5], 544, 1 l., [4], 82, [2] p.; 100 plates. **Title tr.:** Description of the Finnmark Lapps, their language, mode of life and primitive religion; with notes by J. E. Gunner; and a treatise on the heathen religion of the Norwegian Finns and Lapps, by E. J. Jessen-Schardeboell. Text in Danish and Latin (parallel col.).

Classic study written by a professor of the Lappish language at a seminary in Trondhjem, formerly a missionary among the Lapps. The various aspects of life of the Lapps are treated in 23 chapters: their origin, language, character, clothing, dwellings, sleeping rooms and beds, food and beverages, household implements and utensils, reindeer management, means of transportation, seasonal wanderings, hunting and fishing, crafts, various customs, marriage, feasts and amusements, telling of stories, diseases and funerals, the Lapp gods, heathen sacrifices, magic practices by use of runic symbols or incantations (*juoigen*), various superstitions, and missionary activities in Lapland.

English translation with some additional inserts was published in: G. Aeerbi, *Travels through Sweden, Finland, and Lapland*, London, 1802, v. 2, p. 135-322, col. plates. Abridged also in: John Pinkerton, *A general collection of the most*

interesting voyages and travels. London, 1808. v. 1, p. 376-490, plate. German translation "Allgemeine Beschreibung von Lappland" in: G. Acerbi, *Reise durch Schweden und Finnland*. Berlin, 1803, p. 433-500.

Two chapters, "Om Finmarkens politivasen", and "Om Finmarkens negotie", omitted in Leem's original edition of 1767, was found in the library of Norske videnskabers selskab, Trondhjem, and published with explanatory notes by L. K. Daa in: *Norske videnskabers selskab, Skrifter*, 1870. Bd. 6, p. 191-240, as *Bidrag til Finmarkens historie af Knud Leem*. **Copy seen:** DLC.

Contains information on degrees of frostbite; its causes and physiology; pathology (changes in blood vessels and blood, effect on nerves, trophic effects); therapy by sympathetic intervention; various techniques of this treatment. **Copy seen:** DSG.

30374. LEGGET, ROBERT FERGUSON. Climate and building. Ottawa, 1951. 8 p. illus. (National Research Council of Canada. Division of Building Research; reprinted from *Engineering and contract record*, Toronto, Aug. 1951) 9 refs.

"Problems faced by Canadian architects and builders are mainly those which arise from extremes of cold or snow. Test huts were erected at Ottawa, Saskatoon, and Churchill [Manitoba] to study heat loss and humidity changes with various types of walls. . . . From the start, climate has been one of the major areas of research for the building industry in Canada. Problems of winter construction, spring break-up, snow loads, wind stresses, heating and ventilating, solar heating, heat loss in soil, weathering, wind chill, etc., are discussed. The close working relations of the Division of Building Research with the Meteorological Service of Can-

ada is stressed throughout. . . ."—*Meteorological abstracts and bibliography*, Mar. 1953. v. 4, no. 3, p. 325.

Ottawa, Nov. 1948. 10, 1, 4, 1 p. diagrs. (National Research Council of Canada. Division of Building Research. DBR report V3)

Contains a list, with comments, of technical papers and films presented at the 1948 Oslo meetings (*Arctic Bibliography*, No. 22823). Appendices include "Resolutions relating to snow and ice" approved by the Commission and "Notes on Scandinavian experience with engineering problems related to snow and ice." The latter includes a discussion of snow removal on railways in Norway and Sweden, a list of papers on Swedish snow fences, and discussion of ice pressure against dams. Other problems are noted. **Copy seen:** CaMAI.

30376. LEGGET, ROBERT FERGUSON. Special foundation problems in Canada. (In: National Research Council of Canada. Associate Committee on Soil and Snow Mechanics. Technical memorandum no. 25, 1952. Soil mechanics papers presented at the Building Research Congress, 1951. p. 165-72). Also summary paper pub. as its Technical memorandum no. 19, Apr. 1951.

Contains discussion of the geology and climate of Canada with relation to foundation engineering. The properties, nature, and difficulties presented to engineering by muskeg and by glacial clays, silts, and till are described. Permafrost, frost penetration, and ice as a bearing medium are discussed. Future Canadian research projects in foundation engineering are outlined. **Copy seen:** CaMAI (summary).

Trudy, 1948, t. 2, p. 268-89, diagr., tables, map) 27 refs. **Title tr.:** Water exchange between the Arctic and Pacific Oceans through the Bering Strait.

Contains geomorphological characterization of Bering Strait and data on its two opposite currents, their seasonal variations and balance, based on former investigations (G. E. Ratmanov, I. V. Maksimov, the U. S. Coast Guard cutter *Chelan* (cruise 1934), also on the author's observations aboard the *Smol'nyiĖ* in 1941. The mass of water brought into the Arctic Basin by the Gulf Stream and by the Kuroshio or Japan Current are compared and their influence on the temperature and salinity of the arctic seas thoroughly discussed.

Contains results of a study of horned animals made during June-Sept. 1952 in Southeast and south Alaska (including Mt. McKinley National Park), Alaska Peninsula, Yukon - Kuskokwim region, Seward Peninsula, northwest Alaska (including the arctic coast to Pt. Barrow), and the Fairbanks area. Wildlife in general, other natural resources, and native peoples with relation to wildlife are briefly discussed. The status of the caribou, reindeer, and moose is dealt with in detail, with briefer discussion of black-tailed deer, Dall sheep and mountain

goat, muskox, bison, and elk. Importance of wildlife management is stressed and recommendations made.

"Investigations on the detection of ice by radar from aboard an ice-breaker are presented. The object of the investigation was to assess the extent to which radar can assist navigation in areas with large amounts of ice, to examine and classify the radar identification characteristics of various types of ice, to determine the characteristics of a radar satisfactory for ice navigation, to take measurements of the echo strengths of ice formations, and simultaneously take physical measurements to relate echo strength to range, target size and shape. The work involved measuring the over-all physical dimensions of ice formations, photography, meteorological measurements, and observations of radar echoes

on the screen and the measurement of their strength. Ice formations of all types ranging from large bergs at a distance of 15-20 mi. to small growlers at two mi. can be detected when the sea is calm. It is unsafe to rely upon radar under conditions of rough sea and bad visibility when sea clutter extends to beyond one mi. Fields of tight pack ice can be detected under all sea conditions out to ranges of about three mi. and leads through the ice over one cable wide are identifiable for a distance just under three mi. on modern British marine radars. Suggestions for improving the detection of ice in sea clutter are made." —SIPRE. **Copy seen:** DLC.

30396. LEPEKHIN, IVAN IVANOVICH. 1740-1802. Dnevnyĭ zapiski puteshestviĭ . . . po raznym provinĭsiĭam Rossiĭskago gosudarstva, 1768 i 1769 godu. Vtorym tischeniem. Sankt-peterburg, Imperatorskaĭa Akademiĭa Nauk, 1795-1814. 4 v.: 3, 537 p.; 2, 338 p., 11 fold. plates; 2, 376, 28 p., 8 fold. plates; 458 p., 2 fold. maps, fold. plan. **Title tr.:** Daily notes of a journey in the various provinces of the Russian state in 1768 and 1769. Second edition. The first edition was published in 1771-1780 in 3 v. (copy not located).

A detailed description of a journey, sponsored by the Russian Academy of Sciences, made in 1768-72, by the author, a naturalist, and his companions (N. Ozerĕskovskii and others). The party traveled from S. Petersburg via mouths of Volga and River Ural to Tyumen' in Siberia returning along a northern route via Arkhangel'sk. Its purpose was to make a many-sided scientific investigation of Russia. Includes description of Arkhangel'sk and an outline of its history (v. 3, p. 330-76), narrative of a trip to Solovetsk Island in 1772 with account of the monastery (v. 4, p. 59-82 and fold. plan at end of vol.) and description of animals, birds and fishes of the White Sea region. The text and supplements of v. 4, which was published after the death of the author, include a narrative of Ozerĕskovskii's trip to Cape Kanin Nos and Cape Svyatoy Nos (p. 83-122); second-hand descriptions of Novaya Zemlya and Kolguyev Island (p. 123-96). Extensive, second-hand notes partly in ques-

tionnaire form, are given on the Samoyeds in the Arkhangel'sk area in general and by districts (p. 196-247); the origin of their name, their connection with the Samoyeds of Siberia, their number, customs, trades, personal names and property (and identification marks), burials, religion, shamanism, rites, dwellings, diseases and medicine. Russian settlements in the Samoyed area are noted, and text of a Samoyed fairy-tale given. The marine life, fishes, birds, whales, and their hunting and fishing are described. Historical notes on Zyryans are included (p. 372-419). *Fold. map* shows the southern part of the White Sea. **Copy seen:** DLC.

30397. LEPEKHIN, IVAN IVANOVICH, 1740-1802. Zapiski puteshestviĭ akademika Lepekhina. Sanktpeterburg, 1821-1822. 3 v.: viii, 1 p. l., ii, 492 p.; viii, 540 p.; 436 p. (*In:* Akademiĭa nauk SSSR, Polnoe sobranie uchenykh puteshestvii po Rossii, *pub.* 1818-1825, v. 3-5) **Title tr.:** Narrative of a journey of the Academician Lepekhin.

A reprint of author's *Dnevnyĭ zapiski*, 4 v., 1795-1814, q. v., omitting the part of its v. 4 written by N. Ozerĕskovskii, and all its supplements. A separate atlas of plates and maps, announced at the beginning of the last vol. of the reprint is lacking (not published?). Introduction to its first vol. includes (p. v-viii) a short biography of I. Lepekhin. **Copy seen:** DLC.

30398. LEPESCHKIN, E. Distortion of electrocardiographic effects of intravenously injected solutions due to cooling of myocardium. (*American journal of physiology*, May 1952. v. 169, no. 2, p. 400-402, illus.) 8 refs.

Rapid injection of sufficient (2 ml. and more), cool solutions (17°-21° C.) in laboratory animals caused transient elevation and occasional inversion of the T wave and drop of heart rate. These changes result from cooling of the myocardium, and are avoided when the solutions injected are ca. 1° C. cooler than the rectal temperature.

30401. LEPOTIER, Contre Amiral. La légende du détroit d'Anian. (Geographia, Sept. 1953. No. 24, p. 22-29, 3 col. text maps) *Title tr.:* The legend of the Strait of Anian.

Contains a popular account of the search for the Northwest Passage from 1500—when Corte Real, discovering the mouth of the St. Lawrence and taking it to be the entrance to the Passage, named it the Strait of Anian—to the voyage of Amundsen in 1903-1906. The early expeditions in the 15th and 16th centuries from both Atlantic and Pacific sides are briefly noted, with particular emphasis upon the stories of Juan de Fuca in 1592 and Bartholemew de Fonte in 1640, and the controversy over de Fonte in the 18th century. Later expeditions in the 18th and 19th centuries are briefly discussed. Maps show the straits "discovered" by de Fuca and de Fonte.

30402. LEPP, ERICA, and others. Effect of phenylindanedione and dicumarol in experimental frostbite. (Canadian journal of medical sciences, June 1953. v. 31, no. 3, p. 173-81, tables) 11 refs. *Other authors:* W. Chubaty, and L. B. Jacques.

The above anticoagulants, when administered to rats and rabbits with experimental local frostbite, did not pre-

vent the formation of gangrene, but did prolong its onset. In the rabbits, death from hemorrhage occurred after anticoagulant therapy. Frostbite alone did not alter the prothrombin-time in rabbits, but increased it significantly in rats. The rabbits showed a much greater increase in prothrombin-time with the anticoagulants after frostbite.

Paris, 1946. xviii, 542 p., 1148 fig., 42 maps. (Paris. Université. Institut d'ethnologie. Travaux et mémoires, t. 47) 250 refs. **Title tr.:** Archeology of the Pacific North. Materials for the study of relations between the riparian peoples of Asia and America.

Contains a well-documented archeological study on migration of peoples and their cultures between Asia and North America. The archeological objects found in northeastern Asia, especially on the Chukotsk and Kamchatka Peninsulas, and on the Aleutian Islands are compared with those found in Alaska and arctic Canada, and two principal routes of migration are established: via Bering Strait, and via the Aleutian Islands. The archeological and recent tools and implements (hatchets and hoes, knives and daggers, harpoons, pottery and lamps, spoons, combs, etc.)

of Ainu, Kamchadals, Chukchis, Asiatic Eskimos and Aleuts are compared with those of North American Eskimos and Indians, and possible migration routes indicated (maps 16-40, and tables on p. 518-27). Nine archeological regions with several subdivisions or zones are constructed (map 41).

des hommes célèbres, v. 2) **Title tr.:** Famous explorers.

Includes accounts of the explorations of the Vikings, by A. W. Brøgger (p. 23-26); Bering, by K. Birket-Smith (p. 76-79); Cook, by J. N. L. Baker (p. 82-85); La Perouse, by A. Reussner (p. 90-93); des Groseilliers and Radisson, by G. L. Nute (p. 142-43); Hearne, by M. Giraud (p. 152-53); Mackenzie by H. A. Innis (p. 154-55); Thompson, by H. A. Innis (p. 158-59); Frobisher, by A. Leroi-Gourhan (p. 236-37); Hudson, by J. B. Brebner (p. 238-41); Franklin, by R. Gessain (p. 242-45); N. A. E. Nordenskiöld, by H. Wassen (p. 246-49); Peary, by R. Gessain (p. 250-51); Charcot, by J. Rouch (p. 252-53); Amundsen, by A. Leroi-Gourhan (p. 254-57); Rasmussen, by K. Birket-Smith (p. 258-60); J. C. Ross, by R. Gouzy (p. 268-69); and Byrd, by A. H. Broderick (p. 278-80). An introductory summary of arctic exploration is given (p. 232-35). Chronological summaries following the text include brief notes on the Vikings (p. 299-302); and on explorers (not treated in the text) of the Northwest Passage search (p. 307), Canada (p. 326), Alaska (p. 327), Siberia (p. 338); and on the Arctic subdivided into subjects and areas (p. 342-50). Maps show routes taken by explorers. Index lists some 1800 explorers cited in the text. Editor's introduction deals with the psychology of explorers, and a final paper by L. Laming with explorers of the future. **Copy seen:** DLC.

30412. LEROI-GOURHAN, ANDRÉ, 1911- . Le mammoth dans la zoologie des Eskimos. (La terre et la vie, July 1935. année 5, 2e sem., no. 1, p. 3-12, 9 illus.) 10 refs. **Title tr.:** The mammoth in the zoology of the Eskimos.

Contains a discussion of the Alaskan and Bering Strait Eskimos' conception of the mammoth, according to their narratives and representation of it on walrus ivory carvings. In the Eskimo imagination, the mammoth belongs to the same category of mythical animals as the mythical whale and reindeer; it was a gigantic marine mammal which occasionally came ashore and could walk on land. The Eskimo conception is closer to reality than that of the Tungus, Yakuts, Kamchadals and Ostyaks who think of the mammoth as a giant underground rodent which caused earthquakes. Five Eskimo carvings are described.

Contains a dermatoglyphic study and analysis of 64 Eskimo palm imprints compared with 396 such imprints of Frenchmen. Both groups included women. **Copy seen:** DLC.

30418. LETARD, ÉTIENNE. Zootechnie climatologique. (In: Piéry, M., ed. *Traité de climatologie biologique et médicale*. Paris, 1934. t. 1, p. 532-38) **Title tr.:** Climatological zootechny.

Contains an account of the effect of climate on the distribution and breeding of domestic animals (dog, horse, cattle, pig, etc.) and the role of climate in formation of races, including the effects of cold climate on size, color, yield (of milk, wool), and the resistance to diseases.

Copy seen: DLC.

30419. LETHBRIDGE, THOMAS CHARLES. Archaeological data from the Canadian Arctic. (Royal Anthropological Institute of Great Britain and Ireland. *Journal*, 1939. v. 69, p. 187-233, 27 text illus., 4 plates) 14 refs.

Contains report on excavations made by the Wordie Expedition to North West Greenland and the Canadian Arctic in 1937. The excavations were made at eight places on the Cary Islands, Buchanan Bay, North Devon Island, and in the Baffin Island fjords. The work at each is outlined, the artifacts described, culture of the place briefly characterized. Artifacts of bone, antler, ivory, flint, and wood were found, belonging to the Eskimo cultures of Thule and Cape Dorset type.

Copy seen: DSI.

30420. LEVIN, LOUIS, 1908-. Effects of several varieties of stress on the cholesterol content of the adrenal gland, and the serum of rats. (Endocrinology, July 1945. v. 37, no. 1, p. 34-43, diagr., table) 14 refs.

Contains an account on experiments with rats exposed to various types of stress, with the cholesterol of the adrenals and of the blood serum subsequently determined by specific, quantitative methods. Animals exposed to cold (0° to 5° C.) for 16-22 hrs. showed a small loss of adrenal cholesterol, with that in the serum normal; after exposure for 72 hrs. the cholesterol content of the adrenals was normal. This suggests an early depletion of adrenal cholesterol followed by later restoration.

30421. LEVIN, MAKSIM GRIGOR'EVICH, 1904-. Antropologicheskie tipy Okhotskogo poberezh'ia. (Akademiia nauk SSSR. Institut étnografii. *Trudy. novaia seriia*, 1947. t. 2, p. 84-102, 12 tables) 16 refs. **Title tr.:** The anthropological types of the Okhotsk coast.

Presentation and evaluation of the anthropological material collected in 1930-32 by the collaborators of the Nogaev cultural base committee of the North with participation of the author. The groups of people (male only) investigated were: the Lamuts or Orochs in the region of Ol'sk (83 individuals), a group of Lamuts called Eveni in the region of Okhotsk (51), a group of reindeer Tungus or Evenki from the Afano-Malsk District (54), a group of Lamuts from the Arman' village, Ol'sk District (25), a group of the so-called Kamchadals in the villages of Iamsk and Tuman, Ol'sk District (35 individuals, a mixed population, mostly Russified, settled Koryaks), and a group of the old Russian settlers from the village of Inya in Okhotsk District (38). The following anthropological measurements and observations were made: size (stature), color of hair and eyes, growth of beard and mustache, head measures, form of forehead and eyebrows, horizontal profile of face, face measures, nose, epicanthus, and form of lips. The author compared the physical types of Lamuts and Tungus, and found among them seven different points (p. 91). The anthropological types of the Okhotsk Tungus and Lamuts were compared with

the Tungus from the northern Baykal District investigated by Roginskii in 1927, and it was found that the Baykal Tungus are more akin to the Lamuts-Orochels than to the Tungus-Evenki of the Okhotsk District (p. 95-96). The author found among the inhabitants of the Amur and Okhotsk seacoast, five different anthropological types (p. 96-97): the Amurian type (Mongoloid, close to northern Chinese), the Far Eastern branch of the Central Asiatic type (also Mongoloid), the seashore (*primorskii*) type of Orochi, the Sakhalinian type (cf. Ainu and Gilyaks), and the Paleo-Siberian type (obvious among the Tungus of Pribaykal'ye).

30422. LEVIN, MAKSIM GRIGOR'EVICH, 1904- . Dmitrii Nikolaevich Anuchin, 1843-1923. (Akademiia nauk SSSR. Institut étnografii. Trudy, novaiia seriia, 1947. t. 1, p. 3-17, port.)

Contains an account of the life and publications of this outstanding Russian anthropologist and ethnologist (see under his name in vols. 1, 4, 5 of *Arctic Bibliography*). It is followed by two other, short articles (also in Russian) on Anuchin as an ethnographer, by S. P. Tolstov (p. 18-21); and Anuchin as an archeologist, by S. V. Kiselev (p. 22-24). This volume of the Institute's proceedings is dedicated to Anuchin's memory.

30423. LEVIN, MAKSIM GRIGOR'EVICH, 1904- . Drevnie pereseleniia cheloveka v severnoi Azii po dannym antropologii. (Akademiia nauk SSSR. Institut étnografii. Trudy, 1951. n. s., t. 16, p. 469-96) 80 refs. *Title tr.:* Early settlement of man in northern Asia, according to anthropological data.

Study deals with: early and late Paleolithic, Neolithic and bronze age of the forest region and of southern Siberia; the iron age; early settlement of the Far East; anthropological data on the present population: Tungus and Yukaghirs, Eskimos and Paleo-Asiatics; and several southern Asiatic peoples. The anthropological types of these peoples are characterized, following the works of I. A. Roginskii, G. F. Debets, I. I. Maifov, and A. I. Arkho with critical remarks. The Tungus and Yukaghirs are attributed by M. Levin to the "Baikalian" type, a term suggested to replace "Paleo-Siberian". The northern Tungus anthropologically belong to the Baikalian type,

and the southern Tungus to A. Arkho's Central Asiatic type. Northern Tungus culture was considerably influenced by the Yukaghirs. The racial affinities of Asiatic Eskimos are discussed; they are close to the coast and reindeer Chukchis, also to Koryaks, and in part to Kamchadals. M. Levin is opposed to the theory of their being close to the Amerindian type, and agrees with G. Debets who invented the term "Kamchatka type" to cover the Asiatic Eskimos, coast Chukchis, Koryaks and Kamchadals.

30424. LEVIN, MAKSIM GRIGOR'EVICH, 1904- . Étnograficheskiĭ atlas Sibiri. (Akademiia nauk SSSR. Institut étnografii. Kratkie soobshcheniia, 1952. t. 15, p. 3-7) *Title tr.:* Ethnographic atlas of Siberia.

Contains description of a projected publication of the Siberian section of Institut étnografii: a cartographic presentation of the ethnic origins of the Siberian peoples and their historical and cultural relations, also the origin and dissemination of certain cultural elements, etc. The maps, prepared under supervision of L. P. Potapov and M. G. Levin, deal with the ethnographic composition of the Siberian population at different periods; the dwellings, clothing, means of transportation of various ethnic groups, dog breeding, reindeer breeding, skis and boats, etc. The data are drawn from museum collections in Leningrad. Considerable work has been done but the atlas is not yet published.

Kratkie soobshcheniia o nauchnykh rabotakh, 1938-39, pub. 1941. p. 27, table 9) *Title tr.:* The cranio-logical type of the Ostyaks and Voguls.

Contains a note on the author's work on skulls excavated by D. T. Anovich in 1909 in the Ob' valley, mostly at Obdorsk (Salekhard), and preserved at the Anthropological Museum of Moscow University. The skulls are recent (18-20th centuries) and belong to Ostyaks with a very small Samoyedic admixture. Ostyaks may be considered as an intermediate race between Mongoloids and Europoids, and very likely they originated from an ancient mixture of these races. Table 9 gives measurements of

Ostyak skulls in comparison with those of Voguls from the Severnaya Sos'va and Sygva (Gondatti's collection).

Kratkie soobshcheniia o nauchnykh rabotakh, 1938-39, pub. 1941. p. 28, table 11) **Title tr.:** Materials on the craniology of northeastern Asia.

Contains a short account of the author's investigation of skulls from the Chukotsk Peninsula, mostly brought home by N. L. Gondatti and now preserved at the Anthropological Museum of Moscow University, and at the Anthropological and Ethnographical Museum of Academy of Sciences in Leningrad. Skulls were investigated of settled Chukchis (11), reindeer Chukchis (47), Asiatic Eskimos (22), and 21 of unidentified origin. The entire group of skulls shows very little variation and is, on the whole, very close to the western Eskimo type (table 11). The author stresses the anthropological unity of Chukchi and Eskimo.

30431. LEWIN, JOSEPH D. Dams in permafrost. (Public works, May-July, 1948. v. 79, no. 5, p. 22-23, 32, diags.; no. 6, p. 33-34, diags.; no. 7, p. 57-58) 8 refs.

"A discussion of the elements of dam design and construction in permafrost areas is presented. Computations for ice thicknesses that may be expected to cover the reservoir are indicated. The

thermal equilibrium between the reservoir water and underlying permafrost is analyzed. It is estimated that under normal conditions defrosting can be expected under the reservoir water to a depth of 25 percent of the water depth. Dams resting on permafrost must possess unique characteristics of flexibility, internal and external stability, and insulation. When masonry dams are constructed, many expansion joints must be present to allow for inevitable deformations. Data on construction methods applicable to timber, rockfill, and earth-fill dams are given. It is often desirable to retain the reservoir ice rather than sluice it downstream in order to maintain the permafrost underlying the reservoir. Ground subsidence under a dam is minimized by defrosting all ice inclusions in the foundation and filling with some type of grout; consolidating the thawed ground by vibration, or incorporating construction features that preserve the permafrost."—SIPRE.

30432. LEWIS, ROBERT B., and P. W. MOEN. Further investigations on the use of heparin in the treatment of experimental frostbite. (Surgery, gynecology and obstetrics, July 1953. v. 97, no. 1, p. 59-66, tables) 23 refs.

Contains a study on rabbits, aimed to determine whether heparin therapy would decrease the incidence or extent of gangrene in frozen legs, when the blood coagulation time was continuously increased to 30 minutes or more. There was no less necrosis in the experimental animals, and their death rate was significantly higher, than in controls.

Copy seen: DSG.

30433. LEWIS, ROBERT B., and P. W. MOEN. Further studies on the pathogenesis of cold-induced necrosis. (Surgery, gynecology and obstetrics, Nov. 1952. v. 95, no. 5, p. 543-51, illus.) 16 refs.

Contains a study of muscle necrosis induced by cold and compared with that produced by heat or ischemia. Three degrees are distinguished in all the above injuries: (1) coagulation necrosis; (2) slow necrosis, and (3) atrophy. Similarities and differences in macro- and

microscopic appearance are analyzed and possible underlying physiology discussed.

Copy seen: DSG.

30434. LEWIS, ROBERT B. Local cold injury, frostbite. (Military surgeon, Jan. 1952. v. 110, p. 25-41, 20 fig., 7 tables) 34 refs.

Contains a review of the frostbite problem; its military significance; pathology, especially microscopic pathology and therapy. Author supports the view that cold injury acts primarily on the cells, vascular changes being of secondary importance, hence probably, therapeutic means attacking the vascular system have given inconsistent results. The only treatment which has been universally successful is rapid rewarming. Factors affecting the severity of frost injury are also discussed. This paper is the Wellcome prize essay for 1951.

Contains a histo-pathological study of

muscle of frostbitten rabbits' leg examined at intervals of 15 minutes to eight days after injury. Microscopic signs of muscle cell degeneration were already observed 15 minutes after frostbite and are described in detail. Pathological processes advanced to complete necrosis of muscle (and connective tissue) grossly visible three days after injury. The progress of exudation, fibroblastic proliferation and of thrombosis are also described. **Copy seen:** DLC; DSG.

Contains a clinical and experimental study (with nine case histories) of a variety of Raynaud's disease, in which, mainly under the influence of cold, the digits become pale and cyanotic, and after several or many attacks may be lost to dry gangrene. The immediate cause is shown to be spasm of the digital arteries due to a local condition of the vessel walls, vessels of smaller caliber and those on the venous side not being primarily involved. The generally held idea that the syndrome is of nervous (vasomotor) origin, is rejected.

Contains text of the second Holme lecture presenting the main features of chilblains, erythrocyanosis and trench foot; their common etiology and characteristics; pathogenesis of chilblains; predisposing factors; role of clothing, etc.

Copy seen: DSG.

30445. LEWIS, Sir THOMAS, 1882-1945. Observations on some normal and injurious effects of cold upon the skin and underlying tissues; 3, frost-bite. (*British medical journal*, Dec. 20, 1941. p. 869-71) 14 refs.

Contains text of the third (last) Holme lecture with information on the symptoms of freezing; the freezing point of skin; supercooling; natural frostbite; physiology and pathology of freezing; treatment of frostbite.

Copy seen: DSG.

30446. LEWIS, Sir THOMAS, 1882-1945. Observations upon the reactions of the vessels of the human skin to cold. (*Clinical science*, 1930. v. 15, no. 2, pp. 177-208, 18 fig., 2 tables) 7 refs.

Contains a fundamental study on the vascular reaction to cold and its underlying mechanism. Within five to ten minutes upon immersion in water of 18°-15° C. or below, a vasodilatation in the skin of the immersed finger occurs, which lasts during immersion. On withdrawing the finger its temperature rises above that of neighboring, uncooled fingers. Vasodilatation and rise in temperature upon withdrawal, were also observed in toes, ears and other parts of the face. Evidence is presented that vasodilatation is due to a sensory axon nerve reflex, and that a H-substance released by strong cold, awakens this reflex. Degeneration of relevant sensory nerves causes loss of normal blood supply which may result in trophic lesions. The significance of the mechanism in protecting exposed parts of the body from excessive cooling and injury, is discussed.

30449. LEWIS, Sir THOMAS, 1882-1945. Swelling of the human limbs in response to immersion in cold water. (*Clinical science*, Dec. 15, 1942. v. 4, no. 4, p. 349-60, 4 fig.) 8 refs.

Contains an account of experiments on the effects of mild cold on the hand. A swelling of both skin and subcutaneous tissue was observed, rising within three hours, and at 5° C., to 15 percent of their original volume. The swelling is due to inflammatory edema and only very little due to imbibed water. The injurious effect was found to begin at temperatures of 15°-18° C. and increases with decrease of temperature.

Contains account of an investigation on the conditions, effects and after-effects of freezing or supercooling human skin and the ensuing vascular reactions, supplemented and compared with observations on phenomena produced by heat. Temperatures at which freezing or supercooling occurs are determined; the differences of the two processes in their physiology, effects and after-effects on the skin are studied; the injurious effects of freezing, release of a histamine-like substance, fluid transudation, etc. are discussed, and conclusions with regard to frostbite therapy drawn. Pt. 1-2 of this study dealt with effects of burns.

30457. LIBBY, WILLARD FRANK, 1908- . Radiocarbon dating. Chicago.

Univ. of Chicago Press, 1952. vii, 124 p. illus., text map, tables, diagrs., graphs. Approx. 100 refs.

Contains a detailed discussion of the principles, methods, and application of radiocarbon dating. The presence of radioactive carbon dioxide in the atmosphere and its assimilation in the sea and by plants and animals is explained. In living things a balance exists between the rate of disintegration of radiocarbon atoms and the rate of assimilation of new ones; when death occurs only disintegration takes place. The rate of disintegration is unchangeable and independent of its environment; a formula is given. Samples were taken in various parts of the world for measurement of radioactivity. The calculation of the amount of carbon in sea water, living things, and the atmosphere, and the production rate of radiocarbon are discussed. Methods of determination of the half life of radiocarbon, materials from which samples are taken, and steps in the preparation and measurement of the samples are presented, with detailed descriptions of the apparatus and chemicals used. A detailed outline is given of dates obtained from samples throughout the world, including one sample from Yukon Territory, Canada and nine from Alaska. "The significance of the dates for archeology and geology" and the problems involved are discussed in a chapter by F. Johnson, with particular reference to early man in North America. Appendices include lists and sources of equipment and chemicals. **Copied seen: DLC.**

30458. LIBMAN, ÉD. P. Redkie zemli v promyshlennosti. (Redkie metally, 1936. god 5, no. 6, p. 32-35, 2 tables) 3 refs. **Title tr.:** Rare earths in industry.

Includes (p. 34-35) some data on lovorhrite and loparite minerals. Lovchorrite occurs on Yukspor Mt. near the town of Kirovsk in Kola Peninsula. It contains 14-18 percent of thorium dioxide. Loparite occurs all along the Khibiny Range in various percentage; it is a complex ore and contains niobium, tantalum, titanium and rare earth metals. Chlorination of concentrated loparite ore with temperature 600°-700° C. enable extraction of 86-98 percent of niobium pentoxide. **Copied seen: DLC.**

30459. LICHTENBERG, MOGENS. Santa Claus bor i Grønland. (Grønländske selskab. Årsskrift, 1951, p. 9-15, illus.) **Title tr.:** Santa Claus lives in Greenland.

The Danish Tourist Association undertakes (with 300 voluntary workers) to answer letters from English children to Santa Claus in Greenland. From a few letters in 1935, the correspondence has grown to some 120,000 a season. Pictures of Greenland, and a H. C. Andersen fairy tale (in English) are enclosed in the answers. Cultural relations between England and Denmark are said to benefit greatly from this unusual activity.

30460. LID, NILS. On the dual division of North American tribes. (International Congress of Americanists. 28th. Paris, 1947. Actes. Paris, 1948. p. 277-82)

Contains discussion of a "dual organization into 'winter people' and 'summer people' which is found in a belt across the continent northward from the region where winter begins to play a role." Description is given (after Boas and J. Mutch) of certain rites performed in winter by the Eskimos of Baffin Island (Frobisher Bay) and Labrador, and probably also once practiced by the Algonkian Indians towards Hudson Bay. The purpose of the rites (mock fighting, rope-pulling, wearing of amulets and masks, pronouncing of names, etc.) is to vanquish winter and the cold. The population of a tribe is divided into two groups: those born in winter, and those born in summer. The "summerfolk" try to subdue the "winterfolk", and thus stop the cold. Otherwise there is no moiety-organization among the Eskimos. Among the Lapps, winter rites could only be performed by those born in winter. Parallels among other, more southerly Indian tribes and Scandinavians are given. **Copied seen: DLC.**

30461. LIEB, JOEL R., and others. Hematological studies on Alaskan fish. (American Microscopical Society. Transactions, Jan. 1953. v. 72, no. 1, p. 37-47, tables) 19 refs. *Other authors:* G. M. Slane, and C. G. Wilber.

Contains a study of blood elements of the American grayling and lake trout. Differential leucocyte counts and cell size are dealt with; stages of erythro-

genesis and red cell degeneration in the grayling were observed.

30466. LIFE. Birth of a base; now U. S. can be told of the huge effort to build 'Blue Jay' in northern Greenland. (Life (International ed.), Oct. 6, 1952. v. 13, no. 7, p. 56-63, 17 illus., map) Also pub. in regular edition of Life, Sept. 22, 1952. v. 33, p. 130-40, +; with discussion in issue of Oct. 13, 1952, p. 12, +.

Well-illustrated popular account of Operation Blue Jay, the erection of an Air Force year-round big bomber base at Thule, a joint U. S.-Danish weather station on North Star Bay in northwestern Greenland, 900 miles from the North Pole and only 1300 miles from Russian soil. Development began in March 1951, with the arrival of an airborne task force of 600 men, and continued with a shipborne force of 7,500 from July 9 till early Sept. The base is located close to sea level in a shallow rock-strewn valley only a few miles west of Greenland's high (10,000 ft. elevation) icecap. It consists of piers, a 10,000-foot airstrip, 480 acres of barracks, fuel tanks, warehouses, and hangars. Constructional difficulties due to cold, ice, darkness, and permafrost are described briefly. Following this "photographic essay" is an account of living conditions at Thule, by Bill Brinkley, i. e. C. W. Winders, q. v.

30480. LINDGREN, ROBERT. Flodsystemet Mackenzie. (Terra, 1908. v. 20, p. 233-258; 1909, v. 21, p. 41-59, 185-91, 353-61; 1910, v. 22, p. 71-75, 169-79, 259-64) **Title tr.:** The Mackenzie River system.

A list of the rivers and lakes that form the Mackenzie River system in the Northwest Territories of Canada is presented, followed by an historical account of discovery in the region. Information is given on the course, rapids, geological formations, and tributaries of one of the major headstreams of the Mackenzie, Athabaska River, which flows through a delta into Lake Athabaska. Separate sections are devoted to descriptions of this lake as well as of Great Slave Lake and of Slave River, which connects the two. Of the other major headstreams, the Peace River, which flows to the Slave, and the Liard River, receive full treatment. No information is presented on the Hay River. The course of the Mackenzie from Great Slave Lake to its delta and the arctic sea is traced.

Includes mention of northernmost Sweden and Norway in text. Table shows relative and total duration of insolation at Abisko (68°20' N. 19° E.) and Riksgränsen (68°26' N. 18°08' E.); maps show hours of insolation Apr.-Sept., Oct.-Mar., and for the year, for all of Sweden. **Copy seen:** DWB.

30483. LINDOW, HARALD. Labrador och dess Eskimåer. (Terra, 1923. v. 35, no. 1, p. 4-19, 7 illus.) **Title tr.:** Labrador and its Eskimos.

The Labrador Eskimos are divided into three groups: Sorkinermiut, Tarrarmiut, and Itivermiut, all of which live north of Hamilton Inlet, the Indians having driven the Eskimos out of the southern parts of Labrador. In Greenland the mingling of the white and Eskimo races has had good results, but this has not been the case in Labrador, where the "open-door" policy has had a detrimental effect on the Eskimo's economy. Venereal diseases, tuberculosis and the bubonic plague have decimated the Eskimo population. The author, Inspector for North Greenland, describes his visit to the completely deserted town of Okak. The work done by the missionaries in Labrador is praised, although it is not likely to save the Eskimo population from dying out.

30495. LION, A. Baustoff Eis. (Umschau, Mar. 5, 1932. Bd. 36, p. 195) **Title tr.:** Ice as a building material.

"Ice produced and shaped by refrigeration coils placed in the ocean is suggested as a building material. Experiments were made in a lake using liquid air as the refrigerant. An ice dam formed after three hours which slowly melted after six days at water temperatures of 6°-8° C. It is proposed that the ice be used for dams to protect shorelines, islands, or port installations which are endangered by ocean waves. Dikes provided with refrigeration coils at the time of erection to prevent flooding are suggested."—SIPRE. **Copy seen:** DLC.

LIPETS, R. S., see Tsentralfnyl muzei narodovedeniâ, Moskva. Religioznye verovaniâ narodov SSSR. 1931. No. 32550.

composition of the Kanin cod species taken in 1923.

Contains a detailed biometrical analyses of heads of cod taken on the Kanin sandbank in Barents Sea by S. V. Averintsev's expedition on the trawler T38, July-Aug. 1923. Some standard biometrical characteristics of the cod are given in tables and graphs. Summary in German. **Copy seen:** DLC.

30497. LIPPERT, T. W. Cerro Bolivar; saga of an iron ore crisis averted. (American Institute of Mining and Metallurgical Engineers. Transactions, 1950. v. 187, p. 178-92, illus. incl. col. maps, pub. in Mining engineering, Jan. 1950. v. 2, no. 1)

Includes (p. 185-86, 191-192) description of the Quebec-Labrador iron ore deposits, concessions granted, analyses of ores, and future market outlook. Map (p. 182) shows relationship to other Western Hemisphere deposits and U. S. consuming centers. **Copy seen:** DLC.

30498. LIPPMANN, HEINZ I. Intrarterial priscoline therapy for peripheral vascular disturbances. (Angiology, Apr. 1952. v. 3, no. 2, p. 69-91, illus., tables) 18 refs.

Contains a report on priscoline therapy in 80 cases including four with intractable Raynaud's syndrome. The results were "remarkable" in three of the cases; the non-injected arm was used as control. Technique and dosage are presented; the value of priscoline in diagnosis is also discussed. **Copy seen:** DSG.

30499. LIPS, JULIUS ERNST, 1895- Naskapi trade; a study in legal acculturation. (Société des Américanistes de Paris. Journal, 1939. nouv. sér., t. 31, p. 129-95, text tables)

Study of the customary laws, economic life and process of acculturation of the Montagnais-Naskapi Indian hunters of Labrador. It is based on the author's field work in 1935, and on archival studies in London in 1936-1937, where the diaries of Hudson's Bay Co. factors, ("Mistassini reports") covering the years 1820-1840, were used extensively. **Copy seen:** DLC.

30500. LIPSHITS, SERGEÏ UL'EVICH, 1905- Russkie botaniki; biografiâ bibliograficheskii slovar'. Otvetsvennyi redaktor V. N. Sukachev. Moskva, Izd-vo Moskovskogo ob-va ispytatelei prirody, 1947-1952. v. 1-4 (335, 336,

488, 644 p.) **Title tr.:** Russian botanists: a biographical-bibliographical dictionary. Under the editorship of V. N. Sukachev.

Contains accounts of Russian botanists (including some plant breeders, geneticists, microbiologists, etc.), with the emphasis on their original contributions to science, discoveries, expeditions and itineraries, theories, etc. Included are scholars active between 1725, the year of the founding of the Russian Academy of Sciences, and the present. Each entry gives an account of the life, schooling, career and activities of the subject, followed by a list of his publications. Living scientists are included and their papers appearing currently are cited. About 8,000 botanists with some 50,000 publications are to be covered in this work, of which v. 1-4 pub. 1947-1952 deal with A-Kūz. Many botanists noted for their work in the North are represented (e. g. B. N. Gorodkov with 95 publications cited.) **Copy seen:** DLC.

30501. LIRO, JOHAN IVAR, 1872-1943, and H. ROIVAINEN. Äkamäpunkt. Helsinki, Werner Söderström osakeyhtiö, 1951. 281 p., 145 illus. (Suomalainen eläin- ja kasvitieteellinen seura Vanamo. Suomen eläimet, 6) 76 refs. **Title tr.:** Gall-mites (Eriophyidae).

Contains a morphological sketch of gall-mites, data on their life habit, and a list of about 200 host plants (trees, shrubs, herbs, grasses, etc.) with the names of arachnids causing galls on them (p. 35-75). In the special part (p. 76-262) are keys to the genera and species of the family Eriophyidae, description of about 300 species and forms, and data on their host plants and geographic distribution in Finland. Indexes (Latin names) of gall-mites and host plants are appended. Many of the species are native to northern regions of Finland. **Copy seen:** MH-Z.

Deals with the contemporary marine sediments, containing calcium carbonate, recording seven marine animals with calcareous skeleton and calcareous red algae (*Lithotamnion*) which take part in the formation of carbonate sediments of the northern seas of the U.S.S.R.

Copy seen: MH-Z.

30506. LITOVCHENKO, G. R. Novye porodny sel'skokhoziaistvennykh zhivot-

nykh. (Nauka i zhizn', Apr. 1951. t. 18, p. 15-16, illus., plate) **Title tr.:** New breeds of domestic animals.

In the course of the last 15-20 years, the Soviet breeders, applying the methods of the Soviet scientists (academician M. F. Ivanov and others) have succeeded in developing over 20 new breeds. The main ones, among them a new breed of pig for northern Siberia, are briefly described. **Copy seen:** DLC.

30507. LITTLE, ELBERT L. A natural hybrid spruce in Alaska. (Journal of forestry, Oct. 1953. v. 51, no. 10, p. 745-47) 16 refs.

Contains a formal description and a discussion of *Picea x lutzii* Little, a new hybrid, not listed in floras and tree publications of Alaska. Specimens of this species, a cross between white spruce (*Picea glauca*) and Sitka spruce (*P. sitchensis*) were collected in the summers of 1950 and 1951, by H. J. Lutz of Yale University School of Forestry, on Kenai Peninsula in Chugach National Forest. Publications on this hybrid, found in northern Europe in tree plantations but not in the wild state, are discussed. Location, date, and description are given for the specimens collected by Lutz, and probable distribution of the hybrid in southern Alaska is noted.

30517. LOBANOV, S. P. O merakh bor'by s promerzaniem torfiānoi zalezhi i sposobakh udalenīā merzlogo sloīa na uchastkakh dobychi gidrotorfa. (Torfiānaya promyshlennost', 1952. t. 29, vyp. 10, p. 10-12, tables, graphs) 1 ref. **Title tr.:** Combative measures against the freezing of peat deposits and methods of removal of the frozen layer in the hydropeat mining areas.

"Average frost penetration ranged from 18-45 cm. and snow cover thickness from 22-98 cm. during the five-year period in the Kirovsk peat-mining region in central Kola Peninsula. Manual and mechanical working of the ground increased the porosity and lowered the frost penetration by 10-20 percent and more. The costs of removing frozen ground, 15-45 cm. thick, by TE-2 excavators and other machines are tabulated. The best measures against frost penetration are careful autumn uprooting operations to a depth of 30-40 cm., loosening the ground to a depth of 20-25 cm., covering the ground with tree branches, and better utilization of spring heat for thawing out ground by removing the frozen ground with bulldozers or special ground milling machines."—SIPRE. **Copy seen:** DLC.

30518. LOBOTSKII, N. B. Blasting operations. Vzyvnye raboty. Wilmette, Ill., Oct. 1953. 3 p. 7 diagrs. (U. S. Army. Corps of Engineers. Snow, Ice and Permafrost Research Establishment. Translation 23) Translated by J. J. Peel, from original Russian paper pub. in 'Stroitel'naya promyshlennost', 1943, v. 21, no. 9.

Deals with large-scale loosening of frozen ground for foundations. Proper distribution of blast holes and size of

charges are discussed. Holes 15-30 cm. deep were bored with charges of 2-4 kg., the number of charges averaging 0.7-0.8 per sq. meter. "The charge must be placed 20-30 cm. above the frozen boundary for a[n] effective blast." Electric drilling machines and drill bits, blasting small pits, and reducing danger of flying pieces of frozen ground are also discussed.

30520. LOCKETT, M. C., and B. J. LUYET. Survival of frozen seeds of various water contents. (Biodynamica, Dec. 1951. v. 7, no. 134, p. 67-76, table) 6 refs.

Contains a report on experiments with wheat seeds. When air-dry (water content of embryos 10 percent), seeds were not affected by freezing in liquid nitrogen (-195° C.). When soaked till the embryos contained 50 percent water and frozen, the seeds were killed by this treatment. When the water content increased from 28 percent to 42 percent, a gradually increasing damage by freezing was observed, the regions of the embryo absorbing water fastest, being injured first and most.

Contains information and data on the occurrence of frostbite in war and peace; its etiology; clinical course; pathogenesis and pathology; complications; treatment including that of sequelae; prophylaxis; transportation of patients; etc. **Copy seen:** DSG.

30532. LORAIN, S. H. Government assistance to mining in Alaska. (*In:* Alaskan Science Conference . . . 1951. Proceedings, pub. 1953, p. 173-78)

Contains a discussion on the necessity, type, and adequacy of government assistance to lode mining. High operating and transport costs makes government aid imperative at present. Seven government agencies are discussed with emphasis on the work of the Defense Minerals Administration, initiated in 1951, which offers exploration and production loans and access road construction. Six types of government aid are listed. Existing programs meet basic requirements, but would be inadequate for a rapid expansion of mining activity. The future of the industry, preferably under private enterprise, is considered.

30533. LORANT, A., and others. Storage of blood below 0° C. in liquid state. (Journal of clinical investigation, Oct. 1953. v. 32, no. 10, p. 1005-1012, illus., table) 11 refs. *Other authors:* G. J. Lorant, A. Angrist, and R. Korpman.

Preservation of blood at temperatures below freezing, kept liquid by use of pressure and ethyl alcohol was studied.

Considerable hemolysis was caused by the high pressure applied. The presence of 21 percent alcohol in the blood permitted storage in the liquid state at -12° C.; at this temperature the alcohol did not hemolyze the red cells, when isotonicity was maintained. The spontaneous hemolysis of blood kept from freezing by alcohol and dextrose after four months at -12° C. was less or equal than in blood stored at 4° C. in A-C-D solution. **Copy seen:** DSG.

30534. LORD, CLIFFORD SYMINGTON, 1908- . Geological notes on southern District of Keewatin, Northwest Territories. Ottawa, 1953. 11 p. 3 fold. maps. (Canada. Geological Survey. Paper 53-22) 9 refs.

Contains results of a 57,000 sq. mi. geological reconnaissance by helicopter, summer 1952, covering Keewatin south of approx. 63° N., and including the Chesterfield Inlet region. Pleistocene and post-glacial features are briefly noted. Bedrock geology is discussed in some detail, prospecting and development efforts from 1928-29 are outlined, and mineral resources noted. About 14,000 sq. mi. of the area should be carefully investigated for commercial deposits of gold, nickel, copper, pitchblende, and other minerals. Two geologic maps (scale: 1 in: 8 mi. = 1:506,880) are included. **Copy seen:** DGS.

30535. LORD, CLIFFORD SYMINGTON, 1908- . Operation Keewatin, 1952: a geological reconnaissance by helicopter. (Canadian mining and metallurgical bulletin, Apr. 1953. v. 46, no. 492, p. 224-33, illus., 2 text maps, 2 tables) 8 refs.

Contains a description of mapping done by a 16-man party led by the writer, May 12 to Sept. 1, 1952, over 57,000 sq. mi. of southern Keewatin District, south of approx. 63° N. (except for the Hudson Bay coast where the Chesterfield Inlet region was included). The project was to assess the value of geology and mineral resources. Radio, aircraft, and camping equipment, operational data, and mapping procedure are described. Routine geological observations were made from two helicopters and checked by landings. Logistical support was provided by a Norseman

aircraft on skis and floats. A summary of the geology of the area is followed by a discussion of costs of the survey and an evaluation of the aerial technique as compared with conventional mapping by ground parties. **Copy seen:** DGS.

30536. LORENZ, ALBERT. Operative Therapie der Kriegserfrierungen im Bereiche des Fusses. (Zeitschrift für Orthopädie und ihre Grenzgebiete, 1944. Bd. 75, no. 2, p. 118-26) **Title tr.:** Surgical therapy of the foot following frostbite in war.

Contains a critical discussion and examination of the functional value of stumps resulting from frostbite interventions; techniques, from the toes up to the Chopart amputation level are considered; special consideration is given to plastic surgery and a modified Pirogof amputation. Abstracted by I. Aird in *Bulletin of war medicine*, Aug. 1945, v. 5, no. 12, p. 749. **Copy seen:** DSG.

30537. LORENZ, ANTHONY JOSEPH, 1892- Scurvy in the Parry expedition of 1819. (Science, Jan. 12, 1945. v. 101, p. 36-37)

Contains a note on what are probably the first records regarding difficulties of wound healing in scorbutic individuals. The records, Nov. 18, 1819, Feb. 7, 1820, and appendix 9 in Parry's *Journal 1821 (Arctic Bibliography, No. 13145)* indicate that difficulties in healing were observed in minor sores, in frost injuries, etc.; a fatality caused by combined lung and scurvy involvement is also registered. **Copy seen:** DLC.

39538. LOUCH, C., and others. Effects of stress on diurnal fluctuations in eosinophils of the laboratory mouse. (Society for Experimental Biology and Medicine. Proceedings, Apr. 1953. v. 82, no. 4, p. 668-71, illus., table) 7 refs. **Other authors:** R. K. Meyer, and J. T. Emlen.

Contains an account of observations on mice kept at a temperature of 3° C. for nine weeks. The basic diurnal fluctuation in the number of eosinophils in the blood was maintained, like in controls kept at room temperature. **Copy seen:** DSG.

"The intrinsic factors and a limited coverage of the environmental factors influencing freezing and thawing actions are presented. The topics reviewed include: the theory of frost action in saturated and non-saturated soils and the disturbances produced by the freezing and thawing cycle; the effects of frost action as manifested by frost heave on freezing in seasonally and perennially frozen ground; reduction in load-carrying capacity on thawing and soil movements along slopes. Material on ground properties and conditions affecting or affected by frost action include reports on the composition and thermal properties of soils, structure of unfrozen and frozen ground, density and degree of compaction, degree of saturation and the theory of f. p. depression. Surface icing and its control conclude the review. A summary of research recommendations is included."—SIPRE.

30541. LOWIE, ROBERT HARRY, 1883-. The heterogeneity of marginal cultures. (International Congress of Americanists. 29th, New York, 1949. Selected papers, v. 3, *Indian tribes of aboriginal America*, Chicago, 1952, p. 1-7)

Contains discussion of marginal American economies, those of hunters and gatherers as "early man's extraordinary achievement." References are made (among others) to the arctic zone, the Eskimo hunt of sea-mammals and caribou, their travel in kayaks and in sledges, burning of blubber in lamps, the wearing of snow goggles, etc. Conclusion is offered that the ecological adaptations of marginal peoples reveal an astonishing inventiveness, and the religious, magical, and social aspects of their cultures exhibit comparable heterogeneity.

Copy seen: DLC.

30542. LOWIE, ROBERT HARRY, 1883-. A note on Lapp culture history. (Southwestern journal of anthropology, 1945. v. 1, no. 4, p. 447-54) 9 refs.

Contains discussion on the Lapp economy and on their social organization depending upon the forms of production. A question is raised as to how old reindeer breeding might be among the Lapps, and how numerous were their herds, on the evidence of historical sources and Swedish tax lists. It is concluded that into the 18th century the Lapps were for the most part hunters and fishermen. Their social arrangements in the pre-pastoral period, the communal and personal property, the status of hired workers and women are sketched. Changes involved in their transformation into large-scale stock-breeders are briefly touched upon.

30553. LUGEON, JEAN, 1898- Sur la nécessité d'une station polaire

permanente d'observations radiométéorologiques pour les services de prévision du temps, suivi d'un appendice donnant la description sommaire des atmoradiographes et radiogoniographes. Warsaw, 1935. 96 p. 65 illus. incl. 2 fold. plates. refs. **Title tr.:** The necessity of a permanent polar station for radiometeorological observations for weather forecasting, with an appendix giving a general description of atmoradiographs and radiogoniographs.

"This carefully prepared review is a principal source of information on sferics research as applied to weather forecasting. The appearance and regime of 'atmospheric parasites' in relation to fronts and thunderstorm regions is described for the North Atlantic and Europe, emphasizing observations in the Arctic. The author's network reached from 30° N. to 75° N. (Bear Island [Svalbard]). The effect of auroras is shown and the detection of polar and subpolar atmospherics discussed. A 'terminatogram' is proposed, giving the time of sunrise and sunset for all points of the ionosphere on the whole earth. A program for a polar radiometeorological station is outlined. The appendix presents circuit diagrams, photos, a detailed description of the necessary equipment and a list of 37 papers by the author between 1920 and 1934."—*Meteorological abstracts and bibliography*, Nov. 1953, v. 4, no. 11, p. 1327. **Copy seen:** DLC.

Contains full descriptions of 21 species and one non-determinable species collected during the Danish Peary Land Expedition, 1947-50, from an arm of Independence Fjord. Table gives occurrence, approx. northern limit in East Greenland, and other arctic areas where the Jørgen Brønlunds Fjord algae are found. **Copy seen:** DGS.

30555. LUNDBERG, ANDERS. On the effect of temperature on the depolarization of frog nerve fibres. (Acta physiologica Scandinavica, June 15, 1951, v. 22, fasc. 4, p. 348-64, illus.) 11 refs.

Contains a comparative study on the depolarizing effects, at room and at low temperature, of: potassium, rubidium, ammonium, lithium, iodoacetamide, and veratrine, carbon dioxide and anoxia.

Copy seen: DSG.

30556. LUNDBORG, HERMAN BERNHARD, 1868-1943. Racial structure of the Finns of the northernmost part of Sweden; a short analysis and a preliminary survey. (Hereditas, 1923. Bd. 4, häft. 1, p. 125-32, diagrs., sketch map)

Contains a study of the population of Norrbotten, the most variable of all provinces of Sweden. Tabular data are given on (1) population increase during 1870-1920, and the numbers of Swedish, Finnish and Lappish inhabitants; (2) color of eyes (male); (3) cephalic index (male); (4) morphological facial index (male). The Nordic and Lappic races together form about 60 percent of the population. The pure Finnish component is somewhat greater than either of the other two: it amounts to about 40 percent. **Copy seen:** MH-BL.

30557. LUNDBORG, HERMAN BERNHARD, 1868-1943, and S. G. W. WAHLUND. Rassenverhältnisse im nördlichsten Sverige (Schweden); kurze Übersicht. (Zeitschrift für Morphologie und Anthropologie, 1934. Bd. 34, p. 232-43, 3 tables, map on plate) **Title tr.:** The racial situation in the northernmost Sweden; a short review.

Contains anthropological sketch of Sweden's northern province, Norrbottens Län, inhabited by Lapps (4,000 in 1920), Finns (29,000), and Swedes (115,600). The racial characteristic of the Lapps, their origin and migration in Scandinavia is outlined. The racial influence of Lapps upon the settled population of Lapland, i. e. Swedes and Finns, is considerable. The Finns mostly belong to the East European race, and the Swedes to the Nordic. An investigation was carried out on 10,173 school children (6,936 Swedish, 2,631 Finnish, and 606 Lappish) 7-14 years of age. Their pigmentation of eyes, and length-breadth index of head are evaluated. One-third of the Lappish children have fair eyes, indicating the influence of the Nordic or East Baltic

race. The percentage of dark-eyed Swedish and Finnish children is 21.7 and 26.8 respectively, indicating the possible Lappish influence.

30569. LUYET, BASILE JOSEPH, 1897-, and **M. C. HARTUNG.** Death by divitrification in the nematode *An-*

guillula aceti. (Biodynamica, Dec. 1941. v. 3, no. 76, p. 363-67, table)

Contains a report on experiments with "vinegar eels" vitrified in liquid air and subsequently exposed to temperatures of -5° to -50° C. Exposure to cold of -5° to -39° C. for one minute was always fatal, whilst that of -43° C. to -50° C. for as long as 30 minutes resulted in revival. Mortality increased rapidly at the temperature range of -39° to -43° C. and is believed to be due to devitrification of some essential constituent of the body at these temperatures.

30570. LUYET, BASILE JOSEPH, 1897-, and **M. P. GEHENIO**. The double freezing point of living tissues. (Biodynamica, Dec. 1937. No. 30, p. 1-23, 11 fig.) 7 refs.

Contains a study on the freezing of living and dead potato tissue, in soaked or dried condition, with various cooling velocities and with various thermal gradients through the material. The double freezing point was obtained only with living material. Freezing to a temperature immediately below the first freezing point did not kill the tissue. Soaking induced the double freezing point, drying suppressed it. Other characteristics of living and dead, soaked and dried tissue during freezing, were observed and the conclusion drawn that water exists in living matter in four states, and four theories on the double freezing are discussed.

30571. LUYET, BASILE JOSEPH, 1897-, and **M. P. GEHENIO**. Effect of glycerol in limiting ice formation in tissues subjected to low temperatures. (Biodynamica, Dec. 1952. v. 7, no. 138, p. 107-118, 3 fig., table) 8 refs.

Contains a report on experiments with small pieces of chick embryo heart bathed in 30 percent glycerol prior to being frozen to -30° C. When thawed these produced good growth in tissue culture. Supplementary experiments with large pieces of muscle tissue, treated with 30 percent, 60 percent and pure glycerol prior to being frozen, suggested that the protective action of glycerol results from a combination of easy penetration into the tissues, low toxicity, efficient binding of water and low eutectic temperature.

Copy seen: DLC.

30572. LUYET, BASILE JOSEPH, 1897-, and **G. GALOS**. The effect

of the rate of cooling on the freezing point of living tissues. (Biodynamica, Oct. 1940. v. 3, no. 65, p. 157-69, 5 fig.) 9 refs.

Contains an account on experiments with potato tissue over a wide range of cooling velocities, aiming to elucidate whether it is possible to obtain with living tissue freezing points comparable with those of dead tissue. The results suggest that this may be possible by using very low cooling velocities (five degrees per hour, or less).

Copy seen: DLC.

30573. LUYET, BASILE JOSEPH, 1897-. Effects of ultra-rapid and of slow freezing and thawing on mammalian erythrocytes. (Biodynamica, May 1949. v. 6, no. 121, p. 217-23, fig.)

Contains a report on experiments with smears of oxalated ox blood. When rapidly cooled and rewarmed, about 72 percent of the cells remained intact; slow cooling and/or rewarming left only about four percent of the corpuscles intact. Leaving smears for two hours in liquid nitrogen had the same effect as leaving them for ten seconds. The experiments indicate that it is the formation of ice crystals within the erythrocytes which produces the damage to the cells.

Copy seen: DLC.

30574. LUYET, BASILE JOSEPH, 1897-, and **L. J. MENZ**. Hemolytic effect of freezing at near-zero temperatures. (Biodynamica, May 1951. v. 7, no. 129, p. 25-39, 3 fig., table) 11 refs.

Contains a study on the effect of freezing on oxalated ox blood. There is practically no hemolysis when the blood stays at or near the freezing point, and very little when the temperature is lowered to -3° C. Hemolysis increases gradually as the temperature drops from -3° to -8° C. and an increasing amount of ice is formed. Hemolysis does not take place until more than 75 percent of the water of the blood has changed into ice; it becomes intense when 85 percent to 92 percent of it freezes. The way in which the ice may cause damage to the red cells is discussed.

Copy seen: DLC.

30575. LUYET, BASILE JOSEPH, 1897-, and **M. P. GEHENIO**. Life and death at low temperatures. Normandy, Mo., Biodynamica, 1940. 341 p. illus., diags. (A Series of monographs on general physiology, ed. by B. J. Luyet. No. 1)

Contains a study "of the preservation of life and of the mechanism of death at low temperature." The consecutive parts deal with: (1) The lower limit of vital temperatures in intracellulars (vitamins, enzymes, viruses, etc.); monocellulars; germ cells, spores and seeds; isolated cells and tissues, and in higher plants and animals. (2) Physical states of protoplasm at low temperatures: freezing, the frozen state and melting; supercooling and the supercooled state; the vitreous state, vitrification, devitrification and vitromelting. (3) The mechanism of injury and death by low temperature: action of cold without ice formation and with ice formation. References follow each part, and a general bibliography chronologically arranged (1736-1939), is appended (p. 296-328). The text without this bibliography was published in *Biodynamica*, no. 33, 1938; no. 48, 1939; and no. 60, 1940.

Copy seen: DLC; DSG.

30576. LUYET, BASILE JOSEPH, 1897-, and **M. P. GEHENIO.** The lower limit of vital temperatures; a review. (*Biodynamica*, Apr. 1938. No. 33, p. 1-92) about 168 refs.

Contains an extensive review of the literature, and the problem of survival of organisms (including their components and products) at low temperatures. The following are considered: vitamins, enzymes, hormones; venom; toxins; serum components; viruses, etc.; numerous protophyta and protozoa; germ cells, spores, seeds; isolated cells and tissues of plants and animals; multicellular plants and animals. According to their resistance to cold the organisms are classified into three groups and a general conclusion tentatively proposed, viz., that, with a few exceptions of organisms which are affected by above-zero temperatures "all the plants, animals, tissues or cells either die in the neighborhood of their freezing point or are not killed at all by any low temperature."

Copy seen: DLC.

30577. LUYET, BASILE JOSEPH, 1897-, and **M. P. GEHENIO.** The mechanism of injury and death by low temperature; a review. (*Biodynamica*, 1940. v. 3, no. 60, p. 31-99, 2 fig., 4 tables) about 135 refs.

Contains a review of the ideas on the causes of death by low temperature, specifically protoplasmic and cellular death. Among the physical and chemical

changes which may cause death by freezing, the most important mentioned in the literature are: precipitation, denaturation or coagulation of proteins; ionic dissociation; loss of water-binding properties; synergetic release of water; destruction of some protein-calcium complex; mechanical injury by the ice crystals; lack of vital energy due to low temperature, etc. *Copy seen:* DLC.

30578. LUYET, BASILE JOSEPH, 1897-, and **M. C. GIBBS.** On the mechanism of congelation and of death in the rapid freezing of epidermal plant cells. (*Biodynamica*, Aug. 1937. No. 25, p. 1-18, 7 fig., plate)

Contains a microscopic study of the mechanism of formation and melting of the ice in cells of onion epidermis, the cytoplasmic changes induced by freezing and the stages in the destruction of semi-permeability during death. The cytoplasm of rapid frozen cells is coagulated but its pattern and consistency after coagulation differ from heat-coagulated cytoplasm. Slow thawing did not save the frozen cells. Various characteristics of the thawed cells are also discussed as well as the causes of death in the frozen cells. *Copy seen:* DLC.

30579. LUYET, BASILE JOSEPH, 1897-, and **F. GONZALES.** Protective action of glycerol against freezing injury in embryonic tissues of chick. (*Biodynamica*, Dec. 1952. v. 7, no. 137, p. 101-106, 2 fig.) 8 refs.

Contains an account on experiments with pieces of embryo chicken heart of about 1mm.³. When bathed for one minute in 60 percent glycerol, frozen in liquid nitrogen and rewarmed in Ringer's at room temperature, they produced abundant growth in tissue culture. Omission of the glycerol bath before freezing produced no growth. The treatment with glycerol apparently reduced the amount of ice formed in the frozen tissue. *Copy seen:* DLC.

30580. LUYET, BASILE JOSEPH, 1897-, and **A. GOMEZ.** Solutions of high devitrification point and their relation to the "dangerous" low-temperature range. (*Biodynamica*, Dec. 1947. v. 6, no. 115, p. 151-57, fig.) 6 refs.

Contains a report on observations with solutions of starch and of high molecular weight amyloextrin. When vitrified at -77° C. and then rewarmed, they were

found to crystallize at a temperature of about -6°C . This behavior may explain the fact that some organisms escape injury more readily than others when passing the "dangerous" range of temperature on being rewarmed.

Copy seen: DLC.

30581. LUYET, BASILE JOSEPH, 1897-, and **S. M. GRELL**. A study with the ultracentrifuge of the mechanism of death in frozen cells. (*Biodynamica*, Dec. 1936. No. 23, p. 1-16, 4 fig., 4 plates) 6 refs.

Contains a microscopic study of onion root tips centrifuged at about 23,000 g. in the living state, or after being heated or frozen and then fixed, sectioned and stained. Cells killed by heating were coagulated and showed no displacement of their contents. In frozen cells the constituents are more readily stratified than in vivo, suggesting a more fluid condition; nuclei and the vacuole also assume characteristic aspects. The process of cellular death by freezing is discussed on the basis of these findings.

Copy seen: DLC.

30582. LUYET, BASILE JOSEPH, 1897-, and **M. C. HARTUNG**. Survival of *Anguilla aceti* after solidification in liquid air. (*Biodynamica*, Dec. 1941. v. 3, no. 75, p. 353-62) 7 refs.

Contains an account of experiments with the nematode usually called "vinegar eel" rapidly frozen in liquid air (-190°C). When partially dehydrated in 30 percent ethylene glycol prior to freezing, about 80 percent remained alive after rapid rewarming; slow rewarming resulted in 100 percent dead; when partial dehydration was omitted only about 10 percent survived. The revived worms, were in all cases injured and lived only five-six hours.

Copy seen: DLC.

30583. LUYET, BASILE JOSEPH, 1897-, and **F. GONZALES**. Survival of cells in embryonic heart of chick after freezing. (*Biodynamica*, Dec. 1951. v. 7, no. 133, p. 61-66) 6 refs.

Contains a report on experiments with pieces of chick embryo heart, of about 0.3 mm. diameter, partly dehydrated in a 30 percent solution of ethylene glycol and rapidly frozen by immersion in liquid nitrogen. When quickly rewarmed in Ringer's at room temperature, the pieces produced abundant cell growth in plasma-embryo extract - Earle's solution.

Copy seen: DLC.

30584. LUYET, BASILE JOSEPH, 1897-, and **M. P. GEHENIO**. Thermo-electric recording of vitrification and crystallization in ultra-rapid cooling of protoplasm. (*Biodynamica*, May 1947. v. 6, no. 110, p. 93-100, 2 fig.)

*Contains observations on small pieces of the slime mold *Physarium polycephalum* with and without full water content, cooled at a rate of 500°C . per second. A marked crystallization plateau in cooling curves, in material with full water content was recorded, and retardation of cooling curves with material of lower water contents observed. Comparisons with graphs from 50 percent sucrose solutions suggest that the amount of crystallizing water drops to very small values when the water content in the slime mold decreases from 85 percent to 50 percent.*

Copy seen: DLC.

30585. LUYET, BASILE JOSEPH, 1897-. The vitrification of organic colloids and of protoplasm. (*Biodynamica*, Dec. 1937. No. 29, p. 1-14, fig.) 6 refs.

Contains a study of vitrification and vitrified gelatin gels, fresh albumen, and protoplasm (privet leaves). The vitreous state was obtained by immersion in liquid air. An approximation determination of the zone of crystallization temperatures showed that it does not extend below -15°C . Increasing water content in gelatin gels made their vitrification more difficult. The significance, theoretical and practical, of vitrification of living matter is also discussed.

30589. LYNGE, CLAUD. Traek af erhvers forholdene i Julianehaab-distriktet omkring 1950. (Grønlands Årsskrift, 1952. p. 25-30, port.) *Title tr.*: Features of the state of trade in the Julianehaab Distrikt about 1950.

Contains account of the indigenous trades of the district: seal hunting, somewhat reduced by climatic change, is the preferred work of the people, and sealing equipment (listed) shows considerable improvement over that of 1920. Fishing could be improved by more systematic effort. Sheep-farming started in 1915 with 235 animals, increased to 21,120 by 1948, but was reduced by 50 percent during the severe winter of 1948/49. Data on livestock for 1948-50 are given, and improvement in agriculture noted. The majority of the District's 4,500 inhabitants are said to be dependent now on a monetary economy.

Copy seen: DLC.

30590. LYON, P. A. New highway to Alaska. (Pacific builder and engineer, Jan. 1952. v. 58, p. 70-72, illus., map)

Contains outline of the proposal of Donald McDonald, the "father" of the Alaska Highway, for construction of a 550-mile road from the end of the Caribou Highway at Fort St. James to Atlin in British Columbia. This would link Fairbanks, Alaska, through Whitehorse, Yukon Territory, and Prince George, B. C., to Seattle; and reduce the present distance (Fairbanks-Seattle) from 3400 mi. to 1900 mi. Other advantages, costs and some details of the scheme are discussed. *Copy seen:* DLC.

30591. LYON, THOBURN C. Transpolar celestial for high speed navigation. (International hydrographic review, Nov. 1952. v. 29, no. 2, p. 142-43)

Contains a discussion of a celestial computer for the polar regions, adaptable to any star or to sun, moon, or planets. "Its chief limitations as to accuracy are (1) the limitation imposed by the scale selected for the work; and (2) the mechanical accuracy with which the various parts are assembled." It consists of a stereographic projection of the polar

region to which are fitted two or more templates, one for each of the astronomical bodies observed. The templates and method of use are described. Advantages of the method are speed and the fact that no computation or plotting is required. A similar method is described by C. Chavanier *Diagrams* . . . 1952, q. v. **Copy seen:** DLC.

30594. MacCARTHY, GERALD RALEIGH, 1897-. Recent changes in the shoreline near Point Barrow, Alaska. (Arctic, Mar. 1953. v. 6, no. 1, p. 44-51, illus. table, map)

Contains a study of the shoreline, its

erosion and factors causing it along a stretch of some 30 miles southwest and southeast of Point Barrow. The rapid changes in shoreline configuration, especially at "Nuwuk" the triangulation station at the tip of Point Barrow, and along the south shore of Elson Lagoon were found to be not the result of vigorous action of waves or currents, but due to the presence of ground ice along the shores, which when thawing during the brief summer is easily removed even by feeble sea action. Author's observations were made while at Arctic Research Laboratory at Barrow, engaged in a geothermal project. Bibliographical footnotes. **Copy seen:** CaMAI; DLC.

30595. McCARTHY, KEITH R. The steward of "Sewards Folly." (American forest, Apr. 1953. v. 59, no. 4, p. 8-9, 41-45, illus.)

Contains a biographical sketch of B. Frank Heintzleman, a career forester appointed Governor of Alaska, 1953; also information on the new pulp mill near Ketchikan, projected industries, water power plants; oil prospecting; resorts, etc. **Copy seen:** DA.

30596. McCLELLAN, CATHARINE, 1921-. The inland Tlingit. (In: *Asia and North America, trans-Pacific contacts*, pub. as: Society for American archaeology. Memoirs, no. 9; supplement to American antiquity, Jan. 1953, v. 18, no. 3, pt. 2, p. 47-52, map)

Contains description of mode of life and social organization of three less-known Tlingit-speaking bands at Carcross, Lake Atlin and Lake Teslin in the interior of northern British Columbia and of southern Yukon Territory (see map). The author did field work among these people in 1948, 1949 and 1951. She discusses distinctions made between them and the coastal Tlingits.

30606. McDUNNOUGH, JAMES HAL-LIDAY, 1877- . The Canadian species of the genus *Anomogyna* (Lepid.) (Can-

adian entomologist, 1922, pub. 1921. v. 53, no. 8, p. 176-80, illus.)

Contains descriptions of six species and varieties of lepidopterous genus *Anomogyna*, two species and one variety are new). *A. sincera* and *A. laetabilis*, native to Labrador, and *Pteroscia atrata yukona* n. var. collected at Upper Ram-parts, Yukon Territory (June 8, 1917) are included. **Copy seen:** MH-Z.

30607. McDUNNOUGH, JAMES HAL-LIDAY, 1877- . A new arctic baetid (Ephemeroptera). (Canadian entomologist, Feb. 1936. v. 68, p. 33-34, plate)

Contains a description of a new ephemerid fly *Baetis foemina*, n. sp. collected at Lake Harbour, south coast of Baffin Island by W. J. Brown on the *Nascopie*. Only females, both nymph and adults, were encountered (Aug. 1935) and are described.

Copy seen: DLC.

30608. McDUNNOUGH, JAMES HAL-LIDAY, 1877- . Species of *Euxoa* of eastern North America, with particular reference to genitalic characters, Lepidoptera, Phalaenidae. (American Museum of Natural History, New York. Bulletin, 1950. v. 95, art. 6, p. 355-408, illus. 1-11)

Contains morphological notes, a key to species of moths of the genus *Euxoa*, based on female genitalia (p. 365-66); a systematic description (p. 367-97) of 32 species and subspecies (one subspecies new), with synonyms, references, critical notes, descriptions of genitalia (male and female), and data on distribution. *E. westermanni* (type: Greenland) native to Labrador and arctic regions of Canada as well as some species occurring in Labrador (Hopedale) and northern Ontario (Sudbury, Smoky Falls) are included. **Copy seen:** MH-Z.

30609. MACFIE, HARRY, 1879- . Alaskakust. Stockholm, Bonnier [1951]. 240 p. illus., fold. map. **Title tr.:** The coast of Alaska.

A popular, anecdotal account of a former gold prospector of sailings off and sledge trips near the northern coast of Alaska, between Fish River and Golovnin Bay (Norton Bay region) in the south, and Wainwright and Smith Bay in the north. **Copy seen:** DLC.

30610. MACHINSKIĬ, A. V. Drevniââ êskimosskaâ kul'tura na Chukotskom poluostrove. (Akademiâ nauk SSSR. Institut istorii material'noi kul'tury. Kratkie soobshcheniâ, 1941. vyp. 9, p. 80-89, 3 illus.) 25 refs. *Title tr.*: The old Eskimo culture on the Chukotsk Peninsula.

Contains description and illustrations of two collections made by Bettan and Borisov among the Eskimos of the Chukotsk Peninsula and preserved at the State Ethnographical Museum in Leningrad. The artifacts are made of dark bone and consist mostly of harpoon heads, utensils and implements, all richly ornamented. The Borisov collection contains also a few polished axes and very small knives (?) of nephrite (these objects are not described or pictured). The author thinks that the bone artifacts from the Chukotsk Peninsula are very similar to those found on the islands of Bering Strait, and on the western coast of Alaska, and belong to the Old Bering Sea Culture. The Eskimo culture on both shores of Bering Strait were thus of the same character. The author states that the archeological data contradict the hypothesis supported by Boas and others, that the Paleo-Siberian peoples were of American origin. The thesis that Alaska in olden times was populated by Eskimos originating from the regions of central Canada is also rejected. The author knows the western literature on this question, and frequently cites works of H. B. Collins, Th. Mathiassen, and others.

Copy seen: DLC.

30611. McHURON, CLARK E. Engineering geology in Alaska. (*In*: Alaskan Science Conference . . . 1951. Proceedings, pub. 1953, p. 133-36)

Contains a discussion of engineering geology as practiced by the U. S. Bureau of Reclamation. The duties of the engineering geologist, from the stage of planning and reconnaissance geology, through detailed geologic mapping and resulting

actual construction work, are briefly outlined, and comments made upon the relation of geology and engineering. No specific references to projects or problems in Alaska are made.

30612. McKERN, WILL CARLETON, 1892- . An hypothesis for the Asiatic origin of the Woodland Culture Pattern. (*American antiquity*, 1937. v. 3, no. 2, p. 138-43)

Author advances hypothesis "that a culture closely related and directly parent to the Woodland Pattern, with pottery but without agriculture, originated in Asia, came into America and inland by way of the Yukon and Mackenzie valleys, had a special development in a locale centering just south of Lake Superior to become what is now classified as the Woodland Pattern, and diffused from that center west, south and east . . ." As supporting data, author offers that: material collected in eastern Siberia and published by von Richthofen is strikingly similar to Woodland ware (*Arctic Bibliography*, No. 14522); the distribution of Woodland traits lies along a possible migratory route from Asia to the Great Lakes area, including the Yukon and Mackenzie valleys; reports from scattered areas north of Minnesota, and in Alaska and Asia indicate the occurrence of Woodland-like pottery, associated with Woodland-like mounds in Manitoba, along a logical migratory route from Asia.

30613. MACKINTOSH, N. A. The marking of whales. (*Nature*, Mar. 15, 1952. v. 169, no. 4298, p. 435-37) 2 refs.

Contains an account of the marking activities of the National Institute of Oceanography in Antarctic and African waters, and of the Japanese in the North Pacific. The importance of marking for study of distribution, migration, abundance and age of animals, for the whaling industry and regulation, is discussed, and the results hitherto obtained are summarized. Fin, blue, and humpback whales were the main species studied.

30614. MACKWORTH, NORMAN HUMPHREY. Finger numbness in very cold winds. (Journal of applied physiology, Mar. 1953. v. 5, no. 9, p. 533-43, illus., table) 14 refs.

Contains description of an apparatus and method for assessing finger numbing effects of cold winds, followed by an account of tests made with this method on 35 volunteers at Fort Churchill, Hudson Bay. Raising the wind speed from stillness to only a few miles per hour had the effect of lowering the air temperature by 5° C., thus raising the numbing effect of the low winter temperatures. In resting men, the stronger the winds the lower were the skin temperatures.

30615. McLACHLAN, D. W. The development of the Hudson Bay Project. (Engineering Journal, Apr. 1933. v. 16, p. 155-66, illus., tables, graphs, maps, diagrs.)

"The development work at Port Nelson and at Churchill are discussed. Data on air, water, and soil temperatures are given. The effects of ice formation on the length of the open season at Port Churchill are reported. The mean air temperature is about 17.7° F. at Churchill. The permafrost blanket under the usual moss covering is about 140 ft. thick and has a temperature of about 25° F. The temperature of Hudson Bay water averages about 29° F. below the effects of wave action. The northern half of Hudson Bay usually becomes free of ice in July. The surface water heats rapidly after the ice clears and reaches a maximum temperature of approximately 48° F. about Aug. 25. Rapid cooling then occurs until Nov. 10, which marks the end of the open season on Hudson Bay. Shallow water in Churchill harbor freezes earlier and navigation terminates around Oct. 16."—SIPRE.

30616. MacLEAN, J. H. Marine navigation in the Canadian Arctic. (Institute of Navigation, London. Journal, Jan. 1952. v. 5, no. 1, p. 27-30)

Describes techniques used in the area north of Hudson Strait and west of Greenland, on basis of experience in summers 1948, 1949, as staff navigator on icebreaker U. S. S. *Edisto*. Lack of, or erroneous, charts and publications of hydrographic data, non-performance of the magnetic compass, weather hindrances to astronomical observation, and intervention of ice are the primary problems in arctic navigation. Radar, visual bearings and fixes, and dead reckoning are the most common means of navigation today. The duty of the navigator to acquire and accumulate hydrographic data, and methods by which this should be done, are briefly discussed.

Copy seen: DLC.

30617. McLEAN, JAMES H. Helicopter in the bush. (Canadian aviation, Jan. 1948. v. 21, p. 18-19, 48, illus.)

Describes the use of a leased Bell 47D helicopter for flying on a forest fire patrol, selection of firetower sites, survey of windfall areas, and game preservation patrols, in southern Ontario. A wide range of useful purposes was satisfactorily covered.

Copy seen: DLC.

30618. McCLEARN, FRANK HARRIS, 1885- Correlation of the Triassic formations of Canada. (Geological Society of America. Bulletin, Oct. 1953. v. 64, no. 10, p. 1205-28, 2 text maps, fold. chart) 130 refs.

Includes short sections on the Yukon and on Axel Heiberg and Ellesmere Islands. In the central Yukon fossil evidence has established the Triassic on Beaver River, a tributary of the Stewart, near the mouth of Rackla River, but at no other place, although the Triassic probably underlies large areas. In southern Yukon the Laberge Lake area (61° N. 135°08' W.) contains limestones and clastics of Upper Triassic age. Triassic stratigraphy of the Yukon is not fully established. On Axel Heiberg and Ellesmere Islands, Triassic sandstones, shales, and limestones contain a fossil fauna which shows some resemblance to Triassic faunas of Spitsbergen and Bear Island, but contains no *Nathorstites*. No definite evidence has been found of Triassic on other Canadian Arctic Islands. A similar study on the

Jurassic formations was made by H. Frebold, q. v. **Copy seen:** DGS.

30619. MacLEOD, WILLIAM CHRISTIE. Certain aspects of the social organisation of the northwest coast and of Algonkian. (International Congress of Americanists. 21st, Part 1, *The Hague*, 1924. Proceedings, p. 253-65)

Contains discussion of the Tsimshian, Haida, and Tlingit Indians of the Coast and the Athapaskan tribes of Alaska as mother-sib peoples, surrounded by peoples without sib organization; the origin of the mother-sib and its diffusion. The political form is based on a pyramiding of house chiefs. The Ugalakmiut Eskimos (between Yakutat and the Copper River) were virtually assimilated by the Tlingit racially, socially, and linguistically. The Tlingits and their culture have moved steadily northward, absorbing the Eskimo groups. **Copy seen:** DLC.

30620. MacMILLAN, J. K. Geophysical operations in the Canadian bush. (World oil, Dec. 1951. v. 133, no. 7, p. 81-84, illus.)

Discusses the very many problems involved in geophysical prospecting operations in the bush and muskeg country of northern Canada. **Copy seen:** DLC.

30621. McMURRAY, GORDON A. Experimental study of a case of insensitivity to pain. (Archives of neurology and psychiatry, 1950. v. 64, no. 5, p. 650-67, 5 illus.) 19 refs.

Contains a case presentation of a woman, white, age 22, who from birth has shown a marked insensitivity to pain including that produced by cold (0° to 2° C.). The subject was able to distinguish between hot and cold even when temperature differences were not large; her threshold for warmth was moderately elevated; there was no evidence of organic neurological disease or of personality disorders, her defect being quite specific. **Copy seen:** DLC.

30622. MacNEISH, RICHARD S. Archaeological reconnaissance in the Mackenzie River drainage. (Canada. National Museum. Bulletin, 1953. No. 128, p. 23-39, 3 plates, text map) 10 refs.

Contains report on the 1950 and 1951 field work of the archeological survey of the Northwest Territories by the Na-

tional Museum of Canada. In 1950 the route included the town of Peace River, Hay River, Fort Simpson, Liard and South Nahanni Rivers. In 1951 Great Bear River, western shore of Great Bear Lake, and the Mackenzie River from Fort Norman to the Peel River near Aklavik were covered. Twenty-nine sites are located and artifacts described. Distinctive collections with possible bearing on the problem of Early Man in America are treated in some detail. In general, sites along the Mackenzie River itself seem to be late, earlier sites being found on small lakes and streams back from the river. **Copy seen:** DGS.

30623. MACPHERSON, ANDREW H. An attempt to circumnavigate Banks Island by canoe in 1952. (Arctic circular, Mar.-May 1953. v. 6, no. 3, p. 24-30)

Contains a general account of a two-man expedition led by T. H. Manning (q. v.) during May-Nov. 1952. A trip overland from De Salis Bay to Sachs Harbour, and the canoe trip from De Salis Bay clockwise around the island to Castel Bay on the north coast are described. Ice preventing further travel by canoe, the party went southward overland to Storkerson Bay and Sachs Harbour, thence in late Sept. to the mainland. They remained at Tuk (Port Brabant) till Nov. 15. Geological, botanical, and zoological specimens were collected. **Copy seen:** DLC.

30624. McQUAID, ELIZABETH B. Frontiersman with a mission. (Journal of social hygiene, Apr. 1952. v. 38, no. 4, p. 179-85, illus.)

Contains an outline of the personality of Raymond P. Sanford: his work in the U. S. armed forces in Alaska against venereal diseases; his fight against prostitution including that among Eskimo girls; his activities in public health, education, etc. **Copy seen:** DLC.

30625. McWHAE, JOHN ROSS HOPE. The Carboniferous breccias of Billefjorden, Vestspitsbergen. (Geological magazine, July-Aug. 1953. v. 90, no. 4, p. 287-98, plate, sketch map, diag., 2 tables) 23 refs.

Contains data on five breccias observed in the Carboniferous rocks of the Billefjorden area, central Vestspitsbergen, during the Cambridge Spitsbergen Expedition in 1949. The geology and structure of the area is summarized in a map and table, and each of the breccias is described. Eight hypotheses of breccia formation are presented and it is concluded that "the main breccias are due to collapse following solution within the underlying beds." Other breccias may be due to leaching of soluble material originally associated with the rock, faulting, or permafrost changes in Pleistocene to Recent times. Data are inadequate to make conclusions in several cases.

Copy seen: DGS.

30626. McWHAE, JOHN ROSS HOPE. The major fault zone of central Vestspitsbergen. (Geological Society of London. Quarterly journal, 1953. v. 108, pt. 3, p. 209-232, 2 maps (fold.), 8 cross sections) 36 refs.

Contains results of field work in the Billefjorden region during the 1949 Cambridge Spitsbergen Expedition. A detailed stratigraphical summary is followed by a discussion of the fault systems. Faulting occurred primarily in the Upper Devonian and Tertiary periods with possible weak local movements in mid-Carboniferous. The major Upper Devonian fractures are probably results of high-angle thrusting with a later phase of gravity faulting.

Contains discussion of the theories, especially those of B. Laufer and G. Hatt, which attempt to explain the origin of domestication of reindeer. Reindeer husbandry is reviewed among the Lapps (p. 11-16), Samoyeds (p. 17-26), and Tungus (p. 26-27). The author does not believe that the Lapps learned their reindeer breeding from Samoyeds, but rather they took over the practice from the Norsemen, and not earlier than the end of the 9th century. The question of how the Samoyeds acquired their domesticated dogs is discussed. Ancient Chinese sources mentioning reindeer breeding are analyzed.

Contains a study of the hydrological régime of Kara Strait, based chiefly on the results from the Expedition of the Hydrological Section of the Arctic Institute U.S.S.R. in 1934 on the *Pakhtusov* in 1934, and on the *Pakhtusov* and *Arktik* in 1935. A general geographic description of the strait is given, with oceanographic data on temperature, salinity, and on currents from the Kara to Barents Sea and vice versa. The permanent currents in the strait are indicated on two sketch maps, scale 1:510,000. The relationship of various currents and the possibility of navigation forecasts are discussed.

Transhelâ, 1871. 2 pt. in 1 v.: v, 381 p.; 383-690 p. **Title tr.:** A year in the North: pt. 1, The White Sea and its coasts; pt. 2, A trip along the northern rivers. 3d enlarged ed. First ed. pub. 1859 (2 v.: 638, iv; 514, iv p.); 2d. ed. pub. 1864 (608 p.); all with the same content.

Popular narrative of the author's ethnographic expedition to the Russian North in 1856-57, in two parts: The first covers his trips to the Zimniy (Dvinskaya Guba-Mezenskaya Guba), Mezenskiy, Kaninskiy, Letniy (Dvinskaya Guba-Onezhskaya Guba), Onezhskiy, Korrel'skiy (southern coast of Kandalakshskiy Zaliv), and Terskiy (Mys Svyatoy Nos-Kandalakshskiy Zaliv) coasts of the White Sea, to the Solovetsk monastery and to Kola. The second part (p. 383-690) deals with his trips to the Pechora River and along the rivers Mezen', Pinega, and Severnaya Dvina. Landscapes, animals and fishes, ways of communication, populated places and conditions of life, local trades and industry, customs and rites of the Russian population are described. Tales of hunting and fishing in Novaya Zemlya and Kolguyev Island are recorded. Fragmentary and partly second-hand notes on the Lapps, Zyryans and Samoyeds and on their ways of life are included.

Contains condensed report on results of a geographical and sociological expedition to the Kane Basin region in 1950-1951, organized by French Centre National de la Recherche Scientifique. A complete demographic survey was made in ten settlements of the Polar Eskimos,

situated between 76°-79° N. in north-west Greenland (map 2). The demographic and genetic importance of studying a totally isolated group is stressed. Discovered by John Ross in 1818 and first described by R. E. Peary in 1895, the Polar Eskimos are conjectured to have come to Greenland around 1000 A. D. from Baffin Island. In 1950-51 they consisted of 302 individuals (as compared with 253 in 1895). The number of the population at different times, the age of men and women, the marriages, fertility and sterility of women, mortality and its causes, the problem of a genetic variability and the genealogical descent of these Eskimos are discussed. This paper was abstracted by H. Täubert, 1953, q. v.

Contains an account of an expedition in June-July, 1872, organized by the Kazan' Society of Naturalists to study the demography, health conditions and physical status of the Vogulian people. Three persons took part: the writer, a physician; N. V. Sorokin, a botanist; and A. P. Orlov, an ethnographer. Traveling from Perm, the party reached the upper Loz'va and Sos'va (about 60°-62° N. 60°-63° E.) looking for "wild" (nomadizing) Voguls, free from the Russian influence. On the way back, Maliev alone investigated the health conditions in two Vogulian villages in the district of Lyalinsk. In all, seven Vogulian villages were visited, the health and physical conditions of 49 "wild" and 200 Russified (settled) Voguls were investigated. Anthropological characteristics, measurements and demographic statistics of these people are given (p. 15-21). Their dwellings and food, hunting and fishing are also noted, and quotations from literature added. The settled Voguls, concludes the author, are increasing in number, and the nomads diminishing because of hard conditions of life.

30673. MANKER, ERNST MAURITZ, 1893- . Lapparna kring Suorvasjöarna; forskningar i övre Lule älvdal.

(Ymer, 1941. Årg. 61, häfte 1, p. 25-59, 20 illus., incl. 2 maps, 3 diagr.) 30 refs. **Title tr.:** The Lapps around the Suovra lakes; research in the upper Lule River valley.

Contains a general geographical description of the area (66°-68° N. 16°-18° E.) before and after construction of the artificial lake to be controlled for development of electric power. The origin and pre-history of the Lapps in the region may be traced back more than 10,000 years, and Wiklund's theory that the anthropological isolation of the Lapps may find its solution in the North-Norwegian ice-age culture is discussed. Several finds of the old nomadic culture remains were made during author's investigation, which included a detailed study on dwellings. **Copy seen:** DLC.

30674. MANKER, ERNST MAURITZ, 1893- . Die lappsiche Zaubertrommel; eine ethnologische Monographie, II. Die Trommel als Urkunde geistigen Lebens. Stockholm, Hugo Gebers Förlag, 1950. 447 p. front plate, 157 text illus., 63 refs. (Stockholm, Nordiska museet. Acta lapponica 6) **Title tr.:** The Lappish magic drum; an ethnological monograph, II. The drum as a document of spiritual life.

Drawings on 71 Lapp shaman drums are reproduced, described and analyzed, with references made also to ten other drums no longer extant but known from older literature. The several hundred drawings fall into two main groups, (1) realistic and (2) symbolic figures. The former represent men, animals and their activities, such as the hunt, camp, settlement, grave, objects of cult, and other material aspects of life. The symbolic figures represent the sun, gods, demons, sacred places, and other themes of mythological or magic character. Though some of the drawings are not satisfactorily explained, it is clear that the entire Lapp ideology and conception of the external and the supernatural worlds is represented. The first part of this study dealt with types of drums, their distribution, etc. (*Arctic Bibliography*, No. 10854). **Copy seen:** ICU.

30678. MANNING, THOMAS HENRY, 1911- . Narrative of an unsuccessful attempt to circumnavigate Banks Island by canoe in 1952. (Arctic, Oct. 1953. v. 6, no. 3, p. 171-97, illus., text map) 11 refs.

Contains chronological account of events May-Nov. 1952 on Banks Island and mainland. The writer and A. Macpherson (q. v.) made preliminary soundings in harbors on south, west, and north coasts of the island and topographic and geologic notes on coastline and interior, collected bird, mammal, and plant specimens, and excavated four Thule houses. Canoe trip from De Salis Bay clockwise around the island was stopped by ice at Castel Bay on the north coast. Overland trips were made between Castel Bay, Storkerson Bay, Sachs Harbour, and De Salis Bay. Twelve new place names, approved by the Canadian Board on Geographical Names and used on map, are listed with brief notes.

30679. MANNING, THOMAS HENRY, 1911- . Notes on the fish of Banks Island. (Arctic, Dec. 1953. v. 6, no. 4, p. 276-77) 3 refs.

Contains brief record of observations made during the 1952-1953 Banks Island Expedition led by the writer. In 1952 no fish were taken due to weather conditions. In 1953 fishing was done in Thomsen River, northeast point of Castel Bay, and Mercy Bay. Arctic char, whitefish, and sculpins were caught. Two specimens are now thought to be lake trout. *Copy seen:* CaMAI; DLC.

Contains a summary of anthropological observations made in the summer of 1879 among the Lapps of Sweden (54 persons were measured, about 100 photographs made, etc.). Notes on their material culture, intelligence, religion, acculturation, etc., are included.

Copy seen: DLC.

30681. MANTEGAZZA, PAOLO, 1831-1910. Voyage de M. Mantegazza en Laponie. (Société d'Anthropologie de Paris. Bulletin, 1879. sér. 3, t. 2, p. 579-81) *Title tr.:* Journey of Mr. Mantegazza to Lapland.

Contains excerpts from letters written in Lapland on physical and mental characteristics of Lapps, their ethics and author's experiences while working among them. Assisted by Stephen Sommer, Prof. Mantegazza of Florence made photographs and measurements of Lapps, collected their skulls and objects of art and industry, made psychological observations, etc. Tromsø and the interior of Lapland are mentioned.

Contains a study on humans and on laboratory animals concerning the anatomical and physiological changes due to frostbite, and its prevention and therapy. Damage of intercellular spaces, of capillaries and minor blood vessels, thrombosis, and nerve injuries were the most conspicuous changes observed. Prophylaxis and therapy, especially anticoagulants are also discussed. Abstracted by R. Greene in *Bulletin of war medicine*, Feb. 1945, v. 5, no. 6, p. 367.

Contains an account based on 80 cases of frostbite and over 42 cases with sequels, half of the latter with trophic ulcers, numbness, cyanosis and hyperhidrosis. Therapy was local, symptomatic (largely in second- and third-degree cases), or causal. The first included "open treatment" with applications of cod liver oil, Dakin's solution, alcohol; sympathectomy and sympathetic block were applied in causal therapy. Treatment was as early as possible.

30692. MARKWART, JOS. Ein arabischer Bericht über die arktischen (uralischen) Länder aus dem 10. Jahrhundert. (Ungarische Jahrbücher, 1924. Bd. 4, Heft 3-4, p. 261-334) **Title tr.:** An Arabian narrative on the arctic (Uralic) countries from the 10th century.

Contains quotations and extensive linguistic, ethnographical and geographical comments to an old Arabian Ms. (of which copies are in the British Museum), a collection of anecdotes and relics, evidently written in India after 1228 A. D. by a Persian, Aufi, and evidently based on accounts of some Arabian geographer, perhaps Al Gaihani, of around 922 A. D. The Ms., among other things, recounts how a Moslem traveler visited three

places in northern Europe, first the country of the Volga Bolgars (an extinct Finnish people), then, after 20 days' travel, a place called Isū, inhabited by people named Jūra (Jugra, Ugrians). These people used dog sledges, and skates or skis made of reindeer bone, with two sticks for over-snow travel; they traded with the Bolgars, bartering sable pelts for salt and clothing. Beyond the Jūra, on a seashore were another people who hunted a kind of fish (walrus), and from its teeth made handles for knives and swords. In this land there was no night in summer, no daylight in winter. The last place mentioned was probably a region on the White Sea, inhabited either by Bjarmar (i. e. Permians or Zyryans), or Lapps.

30694. MARRIOTT, RICHARD S. Canada's Eastern Arctic Patrol. (Canadian geographical journal, Mar. 1940. v. 20, no. 3, p. 156-61, illus., map)

Contains an account of the 17th annual patrol during July-Sept. 1939 under the command of Major D. L. McKeand on the *Nascopie*, a 15,455 mile trip, calling at posts along Labrador, Hudson Bay, Baffin Island coasts, northward as far as Craig Harbour on Ellesmere, westward to Fort Ross on Somerset Island. Conditions (especially hunting) at the posts and the scientific and administrative work carried out during the patrol are noted. The latter included mail distribution, recording of vital statistics, trial of an Eskimo for child murder; the former comprised studies of strand lines, of natives' health and dentition, of fox population, dog parasitism, duck and geese nesting and migration, etc., as well as collecting of museum specimens, laboratory animals, etc.

30695. MARRIOTT, ROBERT HENRY, 1879- . Atmospherics. (Institute of Radio Engineers, New York. Proceedings, 1924. v. 12, p. 533-37)

"Tests conducted in the summer of 1920 and 1921 showed that static sources were usually located on or near the high glaciated volcanic peaks which rim the Pacific Coast from Alaska to California. . . . A point (Pop Point on Thorne Arm) was found 26 km. northeast of Ketchikan, Alaska, where no static could be obtained for six entire days though radio stations in all directions except east and southeast could be heard. Vague statements as to the cause of the static associated with the high mountains in the path of heated air from the Pacific give no clue as to whether the sources are thunderstorms or snow static."—*Meteorological abstracts and bibliography*, Nov. 1953. v. 4, no. 11, p. 1314-15.

30711. MASON, JOHN ALDEN, 1885- . Eskimo pictorial art. (Pennsylvania. University. University Museum. Museum journal, 1927. v. 18, no. 3, p. 248-83, 15 illus.)

Contains description and illus. of

Eskimo engravings on utensils and implements made of caribou antler and ivory, such as trinket boxes, snuff boxes, needle-cases, and, most commonly, on numerous bowdrills. The rich collection in the Museum originates from northern Alaska, mostly from Point Barrow, a few also from the Kuskokwim River, Cape Prince of Wales, and Nunivak Island. The scenes depicted are quite realistic: caribou, bear, and walrus-hunting, sealing and whaling, dances and games, dwellings, the disposal of killed animals, etc. Such decorations, executed for aesthetic reasons exclusively (no magical value has ever been suggested), are to be found only among the Alaskan Eskimos. "These facts point directly to the conclusion that the practice of making pictorial engravings was not native to Eskimo art but is a development of the last century or two, the initial incentive having been supplied by contact with the first Russian colonists" (p. 253).

30712. MASON, JOHN ALDEN, 1885- . A Naskapi Indian robe. (Pennsylvania. University. University Museum. Bulletin, 1931. v. 2, no. 3, p. 98-99, plate XIII)

Contains notes on the Barren Ground band of Naskapis, in the northeastern-most Labrador, a group least affected by white influence. A collection of their robes of tanned caribou hide with designs was acquired by the Museum.

Copy seen: DLC.

30713. MASON, JOHN ALDEN, 1885- . A remarkable stone lamp from Alaska. (Pennsylvania. University. University Museum. Museum journal, 1928. v. 19, no. 2, p. 170-94, 5 illus., text map) 5 refs.

Contains discussion on four rare specimens of an unusual type of bowl found in southern Alaska: three at Cook Inlet and one, now in this Museum, near Seward, Kenai Peninsula. Made of volcanic tuff, they are massive in size and weight (21-61 pounds). They have a human figure carved in the bottom of the bowl, with the head (only) in relief, and richly ornamented rims. After comparison with other Eskimo vessels, the author concludes that the bowls are stone lamps, made by the Eskimos in approximately the region in which they were found, and other specimens most resembling them are the Eskimo stone lamps from Kodiak Island. The age and possible foreign influence cannot be determined as yet.

Another specimen was described later by F. de Laguna, q. v. *Copy seen:* DLC.

30714. MASSON, JACQUES. Documentation. (*In:* Expéditions polaires françaises. Expédition arctique, 1948-1951. Campagne au Groenland 1950; rapports préliminaires, 1952. Série scientifique no. 15, p. 149-50)

Contains a brief outline of the photographic work done by the writer and J.-J. Languepin during the winter of 1949-50 and summer 1950 on the Greenland inland ice. The cameras used, number of films taken, and the number and sizes of black and white and of colored photographs made, are specified.

Contains brief account of the areas usually affected by frostbite; its clinical

cours., degrees, prognosis, local therapy, sequels; mild cold injuries (pernio, etc.).

Copy seen: NNN.

30724. MATTEINI, MAURO, and P. ARCANGELI. Ghiandole endocrine e loro rapporti con le alterazioni tissurali nell'ipervitaminosi A. (Rivista di clinica medica, July 1951. anno 51, no. 3-4, p. 281-360, 20 illus., 2 fold. tables) **Title tr.:** Endocrine glands and their relation to tissue alterations in hypervitaminosis A.

Contains an extensive study dealing with: (1) The literature on: the relation of vitamin A to the endocrine glands; to the reticulo-endothelial system and the liver, heart and kidney parenchyma; experimental and clinical hypervitaminosis A; hypercarotinemia, etc. (2) Author's own studies on the physiological and histological aspects of the problem, conducted on guinea pigs and rabbits (p. 298-336). (3) Discussion and conclusions. Two stages of hypervitaminosis A were detected in the endocrine system: a well tolerated, largely stimulating phase; and, with increase of dosage, a toxic phase, with signs of atrophy (gonads, pancreas, thymus) or hyperfunction (thyroid, parathyroids). In both phases various other organs showed inflammatory and degenerative changes described by Selye as adaptation diseases.

ogique, 1904-1905, pub. 1906. v. 9,
p. 39-132, illus., tables, 2 text maps)
about 200 refs. **Title tr.:** Essay on
the seasonal variations of Eskimo socie-
ties; a study of social morphology.

Contains discussion on how nomadism
and different modes of life in summer and
winter affect Eskimo religious life, their
social relations, conceptions of property,
justice, and ethics. Causes of seasonal
nomadism are investigated. The differ-
ent forms of summer and winter dwellings
and the communal house (*kashim*) are
described in detail (p. 65-82). Various
Eskimo tribes are dealt with, the study
being based on the literature.

p. 266-78, 7 charts) 15 refs. Reprint
issued as: Expéditions polaires françaises.
Rapports scientifiques, S. IV. 2. **Title
tr.:** The south magnetic pole in 1952
and the comparative displacement of the
north and south poles from 1842 to 1952.

Charts and discussion of estimated
comparative movements of N. and S.
magnetic poles show that: (1) displace-
ment during the past 40 years seems
more important than during the pre-
ceding 60-70 years; (2) displacement of
the S. pole is almost double that of the
North; (3) displacement is S.-N. in both
hemispheres; and (4) S.-N. movement is
more important than E.-W. movement.

U. S. Naval Petroleum Reserve no. 4 on the arctic coast of Alaska, contains an area of 37,000 sq. mi.; another area almost as large, adjacent to the Reserve and north of the Brooks Range, is available for exploration by the Navy. The Reserve has been proven to be part of a petroliferous province. One oil field containing an estimated 30-100 million barrels of oil has been discovered and roughly delineated, and there have been discoveries of natural gas at several localities in the Reserve. Subject to the availability of funds, it is proposed to continue the exploration until the intended reasonable evaluation of the potentialities of the Reserve can be completed.

Copy seen: DLC.

30737. MEADE, ROBERT H. Operation Alaska. (World oil, Jan. 1953. v. 136, no. 1, p. 239-41, illus.)

Outlines history of development of the U. S. Naval Petroleum Reserve no. 4 on arctic coast of Alaska. Lists cooperating agencies. Summarizes results of past

several years' work. Further tests reported needed.

Copy seen: DLC.

30738. MEDICAL BULLETIN OF THE EUROPEAN COMMAND. Army to use new foot powder to prevent cold injuries. (Medical bulletin of the European Command. Nov. 1951. v. 8, p. 523)

Contains a note on a powder developed for the U. S. Army. It is composed of a talcum base and starch, aluminum chloride, potassium alum, boric and salicylic acids. Arctic tests have shown that this powder reduces sweating by up to 24 percent. The role of sweating in hastening cold injury is also explained.

Contains a popular narrative of a six-man expedition led by the writer and sponsored by the Royal Ontario Museum and the National Geographic Society. Between July 25 and Aug. 21, 1951, geological and survey work, lake soundings, biological studies of lake water, and magnetometer studies were carried out at Chubb Crater (60°10' N. 73°30' E.) in northern Ungava Peninsula. The purpose of the expedition was to ascertain the origin of this crater, discovered in 1943. It was found to be 11,500 ft. in diameter, the depth of the lake filling it, 825 ft.; fish with marked signs of undernutrition, as well as plankton were found in it; direct and indirect evidence suggest that the crater was formed by the impact of a giant meteor. Color photographs show the nature of the surrounding country.

30746. MEHRWALD. Die lappländische Industrieausstellung zu Tromsø. (Globus, 1870. Bd. 17, no. 23, p. 366-67) *Title tr.:* An exposition of the Lapp industry in Tromsø.

Contains description of an exposition, Aug. 5-Sept. 15, 1870, which represented Lapland and the Lapps: climate, flora and fauna, minerals, domestic animals (reindeer and dogs); the Lapps' occupations, their tents, clothing and food, handicrafts and trade, documents on customs, health conditions, juridical cases, etc.

Copy seen: DLC.

30747. MEHRWALD. Die Russischen Ansiedler in Lappland. (Globus, 1873. Bd. 23, p. 278-80, 2 illus.) *Title tr.:* The Russian settlers in Lapland.

Contains appraisal of the Russian settlers on the Kola Peninsula: their low morality despite their profession of religion makes them unsuccessful colonizers and the Lapps suffer most, economically, from trade with the Russians. The Karelians attempt vegetable and potato planting near Murmansk, but with little success.

Copy seen: DLC.

30748. MEHRWALD. Zur Kennzeichnung der Finnen im hohen Norden. (Globus, 1872. Bd. 21, p. 328-29)

Title tr.: On the characteristics of Finns in the far North.

Contains account of the life and customs of the numerous Finnish immigrants or Quains, living between Vardø and Vadsø in Norway: their occupation (fishing), housing, liking of the color blue; their mortuary customs, psychology, dance halls, women's clothing and ornaments, wedding customs, etc.

Copy seen: DLC.

Vestnik, Aug. 1950. t. 5, no. 8, p. 63-72, tables) **Title tr.:** Pisciculture and acclimatization of fish as a basis of development of the fisheries in the Karelo-Finnish S.S.R.

Of forty-one thousand lakes of the Republic, only 200 are utilized by the fishing industry. This is due to: (1) growth of the hydroelectric and logging industries which spoil the spawning areas; (2) low stocks of valuable commercial fish in most of the interior lakes (only 18 percent of total catch); (3) faulty fishing methods used in the White Sea and lakes, in disregard of conditions of reproduction. The protection of natural reproduction of valuable commercial species (salmon, fresh-water and marine *Coregonus lavaretus*, herring in Onega and Kandalaksha Bays, etc.), increase of commercial fish stocks by acclimatization, and artificial mass reproduction, planned for 1951-1953, are described and their prospects discussed. The paper was delivered to the Conference on reproduction of fish resources held in Leningrad in March 1950.

Contains a description and summary of results of the dredging and coring program of the expedition "Northern Holiday" of the Scripps Institution of Oceanography in the northeastern Pacific and Gulf of Alaska, July-Sept. 1951. During the Pleistocene, glacial marine drift was

deposited over several thousand square miles of the northeastern Pacific. Since the Pleistocene this drift has been covered by blue mud which was spread out from shore for 250 miles and accumulated to a depth of at least 127 cm. "Southeast of Kodiak, Alaska, blue mud is covered by a thin layer of ash from the 1912 eruption of Katmai Volcano. Ice-rafted pebbles surrounded by envelopes of well-sorted coarse sand are incased in pieces of a thick manganese crust from Gilbert Seamount [Gulf of Alaska] . . . The formation of the pockets and envelopes of coarse sand is ascribed to the action of weak currents although the specimens were dredged from a depth of at least 3600 feet."—Author's abstract. Tables give detailed descriptions of dredge hauls and cores. **Copy seen:** DGS.

A comparative study of a large bald eagle of the northern part of the North American continent, which was described in 1897 by Townsend under the name *Haliaeetus leucocephalus alascanus* (type locality: Unalaska, Aleutian Islands), and

the mysterious "Bird of Washington" (*Falco washingtonii*) described by J. J. Audubon, and long thought to have been an immature bald eagle. The author draws the conclusion that the sizes of Audubon's bird are incredible, and the Washington eagle should be placed with hypothetical species. The list of the subspecies of the bald eagle, including Townsend's *alascanus*, is given on p. 150.

Linguistic study on Asiatic Eskimo grammar, based on material collected by the author on the Chukotsk Peninsula in 1939-41 and 1948. **Copy seen:** DLC.

30760. MENOVSCHCHIKOV, G. A. Novye materialy po éskimoskomu i chukotskomu iazyku. (Akademiia nauk SSSR. Izvestiia, otdel. literatury i iazyka, 1949. t. 8, vyp. 6, p. 570-73) **Title tr.:** New materials to the language of the Eskimos and Chukchis.

Contains account of results from an expedition, organized by the Institute of Language and Thought, to the shores of Bering Strait (Chukotsk Peninsula), June-Nov. 1948. The aim of the party, which included several local school teachers, was to describe the Chukchis and Asiatic Eskimos. P. I. A. Skorik (the leader), noted down Chukchi texts and phrases in illustration of the grammar, E. S. Rubtsova noted down Eskimo texts, and the author himself described two Eskimo dialects, *naukan* and *imaklik*, collected words and texts. Characteristics of both dialects are given in this paper. The members of expedition also organized courses for teachers of Eskimo and Chukchi schools.

A study of geographic races of the Siberian sturgeon, based on the specimens in the collection of the Zoological

Museum of the Academy of Sciences, U.S.S.R. Includes measurements of sturgeon from the Irtysh, Yenisey, Lena and Kolyma Rivers, a comparison of plastic characters of the same specimens (table 2), and discussion of the results. Two forms recognized by the author, *Acipenser baeri*, inhabiting Ob' River, and *A. baeri stenorrhynchus* from Yenisey, Lena and Kolyma Rivers, are described.

30777. MĬAGKOV, I. M. Drevnosti Narymskogo kraja; v sobranii Tomskogo kraevogo muzeia (Tomsk. Tomskii kraevoi muzei. Trudy, 1929. t. 2, p. 51-86, illus., 2 plates) 59 refs. **Title tr.:** Antiquities from the Narym district in the collections of Tomsk District Museum.

Contains description and investigation of 133 archeological objects of copper and bronze, chiefly from three sources: a treasury discovered in 1920 on Mt. Kulayka, district of Chainsk, by a peasant plowing (discussed in the author's *Nakhodka na g. Kulatke*, q. v.); the private collection of a doctor, L. N. Zinchenko, from places around the Chaya, Parabel', and Vasyugan Rivers, acquired by the Museum in 1927; and materials from author's archeological investigations in 1928 on Mt. Kulayka and on the Bokchar River (tributary of Chaya). The objects represent mostly animals and birds, sometimes human

figures; arrow points and some Scythian type cauldrons and vases were also found. The bearers of this culture were probably a Finnish people, perhaps ancestors of the Ostyaks who still live around Narym and Vasyugan.

30780. MICHÉA, JEAN-P. La civilization du caribou. (Géographie, Feb. 1953. No. 17, p. 31-35, col. illus., map) *Title tr.:* The caribou civilization.

Contains a popular description of the part played by the caribou in the life of the Barren Ground Eskimos west and northwest of Hudson Bay. The caribou are described, their habits, feeding grounds, and migrations discussed. Eskimo methods of hunting in summer and

winter are sketched, and the dissection of the caribou and the uses to which its parts are put, also discussed. Map shows the distribution of principal game animals in the Canadian Arctic and limits of game reserves.

Copy seen: DGS.

30781. MICHÉA, JEAN-P. Observations sur la côte ouest de la baie d'Hudson. (International Congress of Americanists. 28th, Paris, 1947. Actes, 1948. p. 129-44) *Title tr.:* Observations on the west coast of the Hudson Bay.

Contains author's impressions from an 18-month sojourn in the region of Chesterfield Inlet and Baker Lake, studying the current economic situation of the Caribou Eskimos and their prospects for the future. The local geography, summer and winter conditions, climate, and the Kazan and Thelon Rivers are briefly described. Then follows account of the coastal Eskimos' mode of life: summer on the coast and winter in the interior; caribou hunting in September along their migratory routes, fox trapping in November and February, and sealing in the spring, the chief economic activities. The Eskimos of the interior depend entirely on hunting of caribou, and bad luck in the fall means winter famine for man and dog. Trade in fox and seal skins for Hudson's Bay Co. trade goods is discussed. The Eskimos increasingly use the white man's food and clothing, guns, and motor boats (kayaks having almost entirely disappeared). The most important economic factor however, remains the caribou. The importance of the missionaries (who usually speak the Eskimo language), their religious and humanitarian activities, and their influence on the Eskimo mind is stressed. The Eskimo seldom speaks English and only the priests can win their confidence, author states. The future of the Barren Lands, he opines, is not hopeless: improved transportation by ship and aircraft, the meteorological station at Baker Lake, military interests, inter-continental air routes and development of Churchill as a port for transshipment of grain from the Prairies to Europe, are mentioned as factors in development of the region.

30782. MICHÉA, JEAN-P. Thulé est morte. Blue Jay l'a tuée. (Géographie, Jan. 1953. No. 16, p. 31-36, col. illus.,

map) **Title tr.:** Thule is dead. Blue Jay has killed it.

Contains a brief popular description of the air base established under Operation Blue Jay 1951 at Thule, northwest Greenland. Construction problems caused by permafrost, and importance of the base in trans-arctic air travel are noted. Its effect upon the Thule Eskimos now excluded from the locality, and on the local animal life is indicated. Map shows Thule in relation to trans-polar air routes. **Copy seen:** DGS.

30783. MICHÉA, JEAN-P. Uomini e caribù. (Vie del mondo, Aug. 1953. Anno 15, no. 8, p. 847-56, illus., text map) **Title tr.:** Men and caribou.

Contains a popular account of the Caribou Eskimos of the Barren Grounds, Keewatin District. The landscape is characterized, and the habits of the caribou and their importance in Eskimo life are discussed. A caribou hunt and Eskimo feast are described.

Copy seen: DLC.

30784. MICHELSON, TRUMAN, 1879-1938. Preliminary report on the linguistic classification of Algonquian tribes. (U. S. Bureau of American Ethnology. 28th annual report, 1906-1907, pub. 1912. p. 221-290b, text tables, fold. table, fold. col. map)

Contains a linguistic classification, based essentially on the occurrence of consonantic clusters, and a few other phonetic phenomena, and on the pronominal forms of the verb. Material was secured by the author on his several trips in 1910-12, and from mss. of other investigators. A chapter (utilizing Edward Sapir's field notes) on the Cree and Montagnais of the southern coasts of Hudson and James Bay is included (p. 238-49). Excluding phonetic changes, Montagnais is practically the same language as Cree. **Copy seen:** DSI-M.

Contains a summary of the Greenland Society's contests for students in Denmark to further knowledge of Greenland. Essay subjects are noted: "The livelihood in the present-day Greenland," and "In which fields is Greenlandic society losing its original characteristics?" Four successful contestants won a free visit to Greenland, and their experiences given in brief.

Copy seen: DLC.

30796. MIKKELSEN, EJNAR, 1880- . Østgrønland. (In: Turistforeningen for Danmark. Årbog 1952-53, pub. 1952, p. 133-60, illus.) *Title tr.:* East Greenland.

Contains popular account of the successful colonization of East Greenland from the Danish government's transfer to the Angmagssalik region in 1895, of some 352 impoverished southwest Greenlanders. This population has increased to 1470. Illiteracy is rare, existing only among the old Eskimos. In 1947 an advisory committee was established, members of which are Greenlanders elected by Greenlanders. There are now three colonies along the coast of East Greenland, viz. Skjoldungen, Angmagssalik and Scoresbysund. Electric light, radio, newspapers, schools, hospitals, churches, homes for old and disabled persons, and mechanization of labour are part of daily life for children and grandchildren of the stone-age Eskimos, who comprised the original colony. An historical sketch of the Angmagssalik colonization project, and the deteriorated condition of the community transferred introduces the account.

Copy seen: DLC.

30797. MIKKELSEN, EJNAR, 1880- . Scoresbysund—kolonien gennem 25 aar. (Grønlandske selskab. Årsskrift, 1950. p. 15-29, illus.) *Title tr.:* The Scoresbysund colony through 25 years.

Contains an historical account of the development, trade and livelihood of Scoresbysund. Data are given on population, fur skins, seal hunting, shark fishery, etc. Navigation and ice conditions are better in the fjord regions of

Scoresbysund than at Angmagssalik—contrary to the opinion of the experts 25 years ago when this colony was founded. Author, its founder, was inspector of East Greenland.

30799. MILCH, LAWRENCE J., and others. Changes in acetylcholine content of the brain during exposure to cold. (Society for Experimental Biology and Medicine. Proceedings, Aug. 1951. v. 77, no. 4, p. 659-61, table) 8 refs. *Other authors:* H. F. Midkiff, P. Matthews, and H. I. Chinn.

Contains a report on male rats exposed to an ambient temperature of -12°C . for two hours. The free and total acetylcholine concentration of the brain of these animals increased significantly as compared to controls kept at room temperature.

Copy seen: DLC.

30800. MILCH, LAWRENCE J. Plasma lipoprotein changes induced by acute local cold injury. (American journal of the medical sciences, Apr. 1953. v. 225, p. 416-20, 2 illus., table) 10 refs. *Other authors:* R. F. Redmond and W. W. Calhoun.

Contains a report on experiments with rabbits. Plasma cholesterol, presumably carried in the blood as a protein conjugate was markedly increased in the frost-bitten animals, and so were the Sf 12-20 and Sf 20-100 classes of lipoproteins. These increases were not the result of hemoconcentration. The possible source of increased lipids and the possible relationship between traumatic injury and atherosclerosis, are discussed.

30801. MILITARY ENGINEER. Handling heavy equipment in cold climate. (Military engineer, Feb. 1947. v. 39, no. 256, p. 84)

Contains note on experience gained in

exploratory work by the U. S. Civil Engineers Corps on the Navy's Petroleum Reserve no. 4 in northern Alaska. Time and equipment were saved in winter by following river channels rather than using overland routes. Travel on coastal ice and dangers from contraction cracks are noted, and choice of lubricants for engines is discussed.

Copy seen: DGS.

30802. MILITARY ENGINEER. Testing equipment for polar conditions. (Military engineer, Feb. 1947. v. 39, no. 256, p. 84-86)

Contains discussion of tests made by the U. S. Navy Antarctic Expedition. Devices for testing properties of snow and ice and for compacting snow for vehicular use are described in some detail. The latter include snow rollers, snow drags, pontoon barge, and snow surface heater. Methods for preparing vehicles for use in snow include extensions on caterpillar tractors, track support blocks, winterization of cabs, batteries, radiators, etc., and proper lubrication. A snow melter to maintain drinking water supply is also described. Condensed Swedish version by K. E. Holm: Transportförhållanden under polarförhållanden (Transport conditions under polar conditions) was pub. in: Pansar, militärteknisk tidskrift, 1947. Årg. 16, nr. 12, p. 21-22 (Copy in DLC).

(Fizioterapiia, 1940 god 15, no. 2-3, p. 42-52, 8 illus., table) **Title tr.:** Experiment in treatment of frostbite with ultra-high frequency waves; preliminary report.

Contains a study of 20 cases treated, preceded by an introductory part on the physio-pathology of frostbite. Includes data on age composition and degree of injury; time interval between injury and treatment; irradiation methods and dosage; effects; case histories.

Copy seen: DSG.

30804. MILLAR, JOHN, 1921- . Tularemia in northwestern Ontario. (Canadian Medical Association. Journal, Aug. 1953. v. 69, no. 2, p. 102-105, illus., table) ref.

Contains clinical data and radiological findings of 32 cases, suggesting the

presence of this disease in northwest Ontario in clinical form. The cases have been typhoidal and/or pneumonic in type, but focal infections of tonsils and the middle ear may be related; eye infections also occurred.

Copy seen: DSG.

30805. MILLER, ALBERT JAY, 1917- . Study of certain blood properties in healthy men transferred from a subtropic to a subarctic environment. (Journal of aviation medicine, June 1949. v. 20, no. 3, p. 201-206) 12 refs.

Contains a study on 30 volunteers made between July 1947 and Jan. 1948 and believed to be the first of this kind. Erythrocyte and leucocyte counts, hematocrit, coagulation times, sedimentation rates, specific gravities of whole blood and plasma, blood sugars, blood total proteins, and fasting serum chlorides were determined. In general the blood studies showed no marked changes in the men who lived first in a subtropic climate (Randolph Field, Texas) and later in a subarctic environment (Ladd Field, Alaska). These studies do not offer evidence for the occurrence of acclimatization to cold. This paper was previously listed as No. 24351.

Contains in the section "Characterization of species and subspecies (p. 46-86), descriptions of the avian genus *Lanius* and two northern subspecies *L. excubitor borealis*, inhabiting northern Ontario, Quebec, and Labrador, and *L. e. invictus* native to Mackenzie, Yukon and Alaska regions (p. 46-53). **Copy seen:** MH-Z.

30807. MILLER, DON JOHN, 1919- . Late Cenozoic marine glacial sediments and marine terraces of Middleton Island, Alaska. (Journal of geology, Jan. 1953.

v. 61, no. 1, p. 17-40, illus., 3 text maps, 7 tables) 29 refs.

A Pliocene or Pleistocene bedrock sequence, totaling 3,675 ft. in thickness and consisting chiefly of marine glacial sediments, is exposed on and near this small island 59°26' N. 146°20' W. The bedrock sequence strikes N. 27°-55° E. and dips 22°-30° NW. Pulsating emergence of the island in late Pleistocene (?) and Recent time is recorded by uplifted marine terraces at five levels 10-105 ft. above the present sea-level. The deposits of gravel, sand, and mud overlying the wave-cut bedrock surfaces of the terraces are largely residual material derived from the bedrock.—From author's abstract. The lithology of, and fossils found in the bedrock sequence are presented in tabular form.

Copy seen: DGS.

30808. MILLER, DON JOHN, 1919- . Preliminary report on the geology and oil possibilities of the Yakataga district, Alaska. Washington, D. C., April 1951. 47 p. fold. map, fold. diagr. Mimeographed. (U. S. Geological Survey. Mineral deposits of Alaska. Short preliminary reports) 40 refs.

Contains a report based on field investigations by Survey parties during summer 1944, 1946-48, in a district of about 2,500 sq. mi. on the Gulf of Alaska between Malaspina and Bering glaciers. The physical geography and previous investigations are briefly described. Three main groups of rocks occur: (1) pre-Tertiary deformed, metamorphosed sedimentary and volcanic rocks; (2) at least 25,000 feet of Tertiary sediments; and (3) unconsolidated Quaternary sediments. The stratigraphy and structure of the Tertiary group, to which oil indications seem to be restricted, are discussed in detail. Oil seepages were reportedly discovered in 1896, but to July 1950 only one well had been drilled. Most of the seepages occur in a belt 18 miles along the coast and extending two miles inland, their distribution indicating that petroliferous rocks occur in the Poul Creek and lower Yakataga formations. Detailed geologic mapping, supplemented by core drilling, will be necessary for further exploration of oil possibilities; in areas overlain by the Malaspina and Bering glaciers, geophysical prospecting or drilling through the ice will be required. The complex structure, scarcity of diagnostic fossils, and lack of key beds makes

geologic exploration of this region difficult.

30812. MILLER, MALCOLM RAY, 1915- , and A. J. MILLER. Physiological effects of brief periods of exposure to low temperatures. (Journal of aviation medicine, June 1949. v. 20, no. 3, p. 179-85, tables) 7 refs.

Contains a report of observations on 16 lightly dressed subjects exposed for 20 minute periods to severe cold (34° to -15° F.). Subjective sensations varied,

but adequate sleep and food increased body tolerance; hemoconcentration was demonstrated in over 75 percent of experiments; an immediate rise of both systolic and diastolic arterial blood pressure was also observed; in 44 out of 50 cases there was an early fall in pulse rate; oral temperatures did not provide a dependable index of body heat loss. The study was carried out at the Arctic Aeromedical Laboratory, Ladd Air Force Base, Alaska. **Copy seen:** DLC.

30813. MILLER, MAYNARD MALCOLM. A flight in search of ice islands. (Weatherwise, Aug. 1952. v. 5, no. 4, p. 78-82, illus., sketch map)

Contains a popular account, by a civilian participant, of a U. S. Air Force B-29 flight on Aug. 1-2, 1951, from Alaska to Ellesmere Island and the vicinity of the Pole. Ice islands T-1 and T-2 were seen, as was the fringing ice shelf of northern Ellesmere which shows the same corrugated surface pattern as the "islands" and is believed to be their point of origin. Several other "islands" seen by the Air Force, a landing on one of them, and establishment of a meteorological station are noted. The ice islands drift westward with the Beaufort eddy of the Arctic Basin from Ellesmere to Alaskan waters, eastward possible to Siberian waters, and back to northern Greenland.

Contains an account of soil fauna collected by Harold C. Hanson, zoologist

of the Perry River Expedition in the summer of 1949. Collemboles were taken near the river's mouth, at Cambridge Bay, Baker Lake, Churchill and Moose Factory. Sixteen forms are described, one of them, a new species (*Uzelia hansonii* n. sp.) in detail; data on localities, distribution, etc., are also included. **Copy seen:** CaMAI.

30817. MILORADOVICH, B. V. O tillitopodobnykh otlozheniakh verhnego silura Novoi Zemli. (Sovetskaiâ geologiâ, 1935. t. 5, no. 11, p. 1030-36, illus.) **Title tr.:** On Upper Silurian tillite-like deposits of Novaya Zemlya.

Contains data on the geological structure of the northeast coast of the northern island of Novaya Zemlya and description of rocks similar in character to the glacial marine beds of Alaska, Siberia and Norway, lying between fossiliferous upper Silurian deposits which are the result of the upper Silurian local glaciation; the region is a part of the Ural-Novaya Zemlya - Taymyr geosyncline. **Copy seen:** MH-Z.

30818. MILOSLAVSKÁIA, N. M. O nekotorykh biologicheskikh osobennostakh *Macoma baltica* L. (Akademiâ nauk SSSR. Doklady, 1952. nov. seriâ, t. 83, no. 6, p. 945-47, diagrs.) **Title tr.:** Some biological variations of *Macoma baltica* L.

Contains results of a study carried out in Baltic, White and Barents Seas, of the marine bivalve mollusc *Macoma baltica*. Two morphological types were observed: one with a large, flat, oval shell, dark in color, living in shallow brackish waters on slimy bottom; the other of smaller size and light in color, inhabiting the deeper and more saline sections of the littoral zone. The first type has the higher growth rate. **Copy seen:** DLC; MH.

30819. MINING ENGINEERING. Aluminum in Alaska. (Mining engineering, Nov. 1952. v. 4, p. 1030)

Considers unfavorable reaction of some Canadians to the construction by the Aluminum Co. of America of an alum-

inum reduction plant in Alaska, utilizing Canadian water power. **Copy seen:** DLC.

30820. MINING ENGINEERING. Foreign mining report, 1949. (American Institute of Mining and Metallurgical Engineers. Transactions, 1950. v. 187, p. 74-80, illus., pub. in Mining engineering, Jan. 1950. v. 2, no. 1)

Includes (p. 76-77) summary of the 1949 developments in the Quebec-Labrador iron ore field in Canada, and the formation of the Iron Ore Co. of Canada. **Copy seen:** DLC.

30821. MINING ENGINEERING. Norway finds niobium ore extraction method. (Mining engineering, Nov. 1952. v. 4, p. 1027)

Norwegian Government mining organization, Norsk Bergwerk AS, announces a new method for the processing of the niobium ore recently discovered at Telemark in northern Norway, and start of construction of a pilot plant. **Copy seen:** DLC.

30822. MINING ENGINEERING. The search for radioactive minerals in Alaska. (American Institute of Mining and Metallurgical Engineers. Transactions, 1951. v. 190, no. 5, p. 400, pub. in Mining engineering, May 1951, v. 3)

Search for radioactive minerals in Alaska is stimulated by Alaskan legislature approval of a \$10,000 bonus for the discovery of such minerals in the Territory, in addition to the recently increased Atomic Energy Commission award. Three areas of radioactivity in Alaska were reported in 1950: in the Hyder district (southeastern Alaska), in south central Alaska, and on the Seward Peninsula. **Copy seen:** DLC.

30823. MINING ENGINEERING. Uranium, swords or plowshares. (Mining engineering, Sept. 1951. v. 3, p. 762-66, illus.)

Canada is stated (p. 765) to be in 1951 the third largest producer of uranium ore in the free world. All of this ore came from the mine of the crown company, Eldorado Mining and Refining (1944) Ltd. on Great Bear Lake in the Mackenzie District. **Copy seen:** DLC.

30829. MISCALL, LAURENCE, 1904- Frost-bite. (Surgical clinics of North America, Feb. 1937. v. 17, p. 303-308)

Contains an article dealing with etiology of frostbite in New York City; its symptoms and therapy.

Copy seen: D.L.C.

30830. MISHCHENKO, LEV LEONIDOVICH. Nasekomye priamokrylye, t. 4, vyp. 2. Saranchevye (Catantopinae). Moskva-Leningrad, Izd-vo Akad. nauk SSSR, 1952. 610 p. illus. (520 fig.) (In: Fauna SSSR. Insecta Orthoptera, t. 4, vyp. 2 (Nov. ser. no. 54)) 168 refs. *Title tr.*: Insecta Orthoptera. Catantopinae.

Contains a systematic index of locusts and grasshoppers of the subfamily Catantopinae (fam. Acrididae); followed by an introduction (p. 15-65) giving characteristics of the fam. Acrididae and a table for the determination of subfamilies; characteristics of the subfam. Catantopinae, history of development, ecology, geographic distribution (19 sketch maps), characteristics of the fauna of Catantopinae of the U.S.S.R., its economic importance as pests of cultivated plants (list of 25 injurious species, p. 58-59), and a bibliography (168 items). In the special part (p. 66-591) are keys to the tribes, genera and species, descriptions of 233 species (three new to science) and some varieties, of which 132 species are native to the U.S.S.R., with synonyms, dimensions and data on biology, geographic distribution and economic importance. Indexes are appended (p. 603-608) for the locusts (Latin names), their enemies, and host plants. Two species

native to the European Russia and five inhabiting northern Siberia and Kamchatka are included in this work.

30834. MITCHELL, HAROLD HANSON, 1886- , and MARJORIE EDMAN. Nutrition and climatic stress

with particular reference to man. Springfield, Ill., Charles C. Thomas, 1951. 234 p. illus. tables, bibliog. (60 p.) First pub. as: *Nutrition and resistance to climatic stress*, 1949.

Contains a review study originally prepared at the University of Illinois for the Quartermaster Food and Container Institute of the U. S. Armed Forces, and subsequently revised to include the literature to Oct. 1949. The section on diet in cold environment (p. 9-41) deals with the physiological effects of cold; the effect of cold on nutrient requirements of energy, proteins, vitamins, water, salt; the effects of diet on resistance to cold including the role of carbohydrates, fats, proteins, vitamins, and also of frequency of meals; food intake and thermal balance in the cold. Subsequent sections deal with "effects of heat and effects of altitude on sweat, basic metabolism, work capacity, digestion, respiration, vision, circulation, nutrition requirements, use of vitamins, etc. The emphasis on diet regulations as an aid to climatic adaptation and heat or cold tolerance rather than clothing regulation (which is more limited in effect) is noteworthy. The body regulates itself against climatic stress through diet, by modifying heat production, heat dissipation, nervous reaction and oxygen economy. Effects of radiation, wind and humidity, as well as of temperature and pressure are considered throughout."—*Meteorological abstracts & bibliography*, Aug. 1953. v. 4, no. 8, p. 867.

Contains information on frost casualties in major campaigns; degrees of injuries and their symptoms; etiology, especially in the field; high susceptibility in African troops; clinical aspects; similarities between trench foot and frostbite; pathology of the different degrees of injury; prophylaxis; treatment; amputation; complications; sequelae.

Copy seen: DSG.

MONSEN, ANDERS, *see* Nesheim, A. Traits Sea-Lappish district. 1949. No. 30971.

30851. MONTANDON, GEORGE. La civilisation Ainu et les cultures arctiques. Paris, Payot, 1937. 272 p. 112 illus., 10 sketch maps, 48 plates. 93 refs. *Title tr.:* The Ainu civilization and the arctic cultures.

Contains a monographic study, first part of which deals with the culture of the Ainu. The second part (p. 181-258) gives consideration to all other arctic peoples, taking selected objects from their technology, economy, social organization and religious beliefs as typical traits or topics. Thus the culture of the Lapps, Ostyaks, Samoyeds, Tungus, Yakuts, Yukaghirs, Koryaks, Chukchis, Kamchadals, Gilyaks and Eskimos is more or less touched

upon, as the author seeks typical manifestations of the arctic culture and parallels among widely dispersed peoples (map of the arctic and subarctic peoples on p. 184-85). The author constructs a genetic scheme of cultures of the "arctic cycle" (p. 252), placing the Ainu as representatives of the first or most primitive stage of the cycle, and the Yakuts as representing the most advanced one. Extensively illustrated with photographs, sketches and diagrams.

Copy seen: DLC.

30852. MONTANDON, GEORGE. Craniologie paléosibérienne; néolithiques, mongoloïdes, tchoukitchi, eskimo, aléoutes, kamtchadals, ainou, ghiliak, négroïdes du nord. (L'Anthropologie, Paris, 1926. v. 36, no. 3-4, p. 209-296; no. 5-6, p. 447-542, illus., 23 plates, 2 sketch maps, tables) 100 refs. *Title tr.:* Paleo-Siberian craniology; neolithic, Mongoloids, Chukchis, Eskimos, Aleuts, Kamchadals, Ainu, Gilyaks, and Negroids of the North.

Contains a monographic study with detailed description, measurements, indexes, photographs, etc., of a considerable number of skulls which the author investigated in Vladivostok in 1919, and other museums (collections of N. Gondatti, Hrdlička and others); he also visited the Ainu on Hokkaido Island, and explored existing literature. Conclusions: to the Paleo-Siberian peoples belong the Eskimos, Chukchis, Aleuts, Yukaghirs and Chuvantzy, the Koryaks, Kamchadals, Gilyaks, Ainu, and Yeniseians. There are three "morphologic poles" among the Paleo-Siberians, viz., the Eskimos, Ainu, and Gilyaks; great similarities exist between Eskimos and Chukchis; the "element Tungus" is of a later date than Paleo-Siberians, and even more recent are the Yakuts. The principal racial components or "bloods" in that area are: the Eskimo, existant among the so-to-say "pure" Eskimos and in some respects the Chukchis; the Ainu, which is more or less represented also among the Kamchadals, Koryaks, Yukaghirs and Chukchis; the Mongoloid, in its two forms, Gilyak-Aleutian and Tungusian, is also to some degree represented among the Kamchadals, Koryaks, and Chukchis; the Amerindian, represented more strongly among the Chukchis and to lesser extent among the Koryaks, Yukaghirs and Kamchadals.

30853. MONTGOMERY, C. R. Eskimo and Loucheux Indians in the Canadian Army. (Arctic circular, Mar.-May 1953. v. 6, no. 3, p. 32-33)

Contains note on several Indians and Eskimos from the Mackenzie delta area joining the Canadian Army 1951-52. The author, a clergyman, was unofficial recruiting officer for the Aklavik region. The men's successful adaptation to army life and the prospects of their future are briefly discussed. Recruiting has now ceased.

30854. MOODY, ALTON B., 1911- Modern polar navigation. (United States Naval Institute. Proceedings, Dec. 1951. v. 77, no. 12, p. 1318-25, illus.)

Contains discussion of charts, direction, celestial and electronic navigation, and practice of navigation techniques. The following projections suggested for charts of the polar regions are described: (1) transverse Mercator, (2) modified Lambert conformal, (3) polar gnomonic, (4) polar stereographic, and (5) polar azimuthal equidistant. The problems of expression and measuring direction are outlined, with discussion of grid navigation, the magnetic compass, marine gyro compass, directional gyro, and the Pfund Sky Compass. The importance of celestial navigation and use of U. S. Navy Hydrographic Office publications (mentioned by H. O. number), and the reasons for little use of electronic methods (loran, radar) are noted. Continuing contribution to navigation techniques are being made by the U. S. Air Weather Service North Pole flights, U. S. Navy expeditions, and the Royal Canadian Air Force. Two navigators are usually carried on all aerial operations.

30855. MOOR, GEORGIÏ G. O trap-pakh Lensko-Anabarskogo mezhdurech'ia. (Problemy sovetskoi geologii, 1938. t. 8, no. 4, p. 329-31) **Title tr.:** On the trap rock of the region lying between the Rivers Lena and Anabar.

Contains a study of the geological structure and mineral content of the traps of the Lena-Anabar section of northwestern Yakutia, with chemical analyses (p. 330) of the traps in the region of Muna River (left tributary of

the Lena, 67°58' N. 123° E.), and data (p. 331) on mineralogical content of the traps in Anabar-Popigay region. Comparison is made with similar rock on the Tunguska and Khatanga Rivers.

30856. MOOR, GEORGIÏ G. Ob istiraushchem delstvii snega v polarnykh oblastakh. (Problemy arktiki, 1939, no. 5, p. 112-13) **Title tr.:** Abrasive action of snow in polar regions.

"Data obtained by Heim, Koch, Wegener, and Teichert on the hardness of snow crystals and their abrasive action when blown by polar winds are summarized. The snow hardness at -15° C. is two to three on the Mohs scale, at -30° C. between three and four, and at -44° C. approximately four. Wind-transported snow crystals at low temperatures cause rock erosion."

30857. MOORE, JOHN CARMAN GAILEY, 1916-, and others. Second preliminary map of Carp Lakes, Northwest Territories. Ottawa, 1951. map sheet, 24 x 30 in. (Canada. Geological Survey. Paper 51-8) 2 refs. *Other authors:* M. L. Miller, and F. Q. Barnes.

Map (scale, 1 in.:4 mi.) with detailed marginal notes, covers an area north of Great Slave Lake between 63°-64° N. and 112°-114° W. Glacial drift covers 75-90 percent of the region; glacial forms are briefly noted. Text contains a detailed description of the sedimentary, volcanic, and intrusive bedrock under the drift. Mineralogy and possible mineral resources are very briefly noted.

Contains an account of the aid given to the Center by the Alaska Crippled Children's Association: equipping a workshop for making braces; decorating and furnishing school rooms and playgrounds; supplying physiotherapy equipment, movie projector and screen, etc.

Copy seen: DSG.

30859. MOORE, TERRIS, 1908- . Some problems of higher education in

Alaska. (*In: Alaskan Science Conference . . .* 1951. Proceedings, pub. 1953, p. 215-26).

The question of starting branches of the University of Alaska in various parts of the Territory is considered in some detail. Problems noted include need for such branches, economy of operation, curricula, and convenience to the public. It is concluded that to 1951 little justification may be found for full-fledged four-year branches, but that the establishment of two-year "community colleges" in Anchorage, Juneau, Ketchikan, and Palmer would fill existing needs for further (especially vocational) education. Such colleges could eventually become four-year institutions if necessary.

30860. MOORHEAD, DAVID L. Landing on the polar icecap. (U. S. Naval Institute. Proceedings, Jan. 1952. v. 78, p. 41-43, illus.)

"A flight with a ski-equipped plane from Point Barrow (Alaska) to an ice stretch 300 mi. northeast required a one-hour pre-heating of the engines through flexible tubes pushed into openings in the engine cover. Freezing of the glass bubble in the top of the fuselage during the flight was eliminated by blasting hot air through a flexible tube wound into the dome. Determination of the degree of aircraft drift below 1000 ft. was facilitated by observing snowdrifts perpendicular to the wind direction. Pressure ridges, 40-50 ft. high, were observed in the Arctic Ocean. Landing on a previous site was accomplished with the assistance of electronic experts. Size and thickness of the surrounding pressure ridges, nearness of a lead, thickness of the ice edge along the lead, snow accumulation and ice color are criteria for a safe landing site. The ice thickness is investigated immediately after landing by cutting through the ice with a power-driven ice saw and the plane engines are cut only if the ice is thick enough."—SIPRE.

30861. MOORREES, COENRAAD F. A. Dentition as a criterion of race with special reference to the Aleut. (*Journal*

of dental research, Dec. 1951. v. 30, no. 6, p. 815-21, 4 fig., table) 16 refs.

Contains a study based on observations and material gathered on the Aleutian Expedition of the Peabody Museum, Harvard University, 1948. Most attention is paid to the torus mandibularis, which in the Aleuts living on Atka and Nikolski appears to be genetically determined rather than due to functional stress. General comparisons are made of dentition of Aleuts, Alaskan and Greenland Eskimos.

Copy seen: DLC.

30862. MOORREES, COENRAAD F. A., and others. Torus mandibularis: its occurrence in Aleut children and its genetic determinants. (*American journal of physical anthropology*, Sept. 1952, new ser., v. 10, no. 3, p. 318-29, 3 text tables, illus., 2 diagr.) 13 refs. *Other authors:* R. H. Osborn, and E. Wilde.

Torus mandibularis (a bony outgrowth on the jaw) has its highest frequency among yellow-brown races and in peoples living in the Arctic. Teeth of 108 adult Aleuts from (mainly) Atka and Umnak, of 163 Aleut children (1-17 years of age) from the Pribilofs were investigated on the Peabody Museum, Harvard University Aleutian Expedition, 1948. Incidence of torus mandibularis was found to be 35 percent in the adults. In the children it was 23.9-3.3 percent; sex differences in its incidence and degree of development are very small, and it does not seem to increase in size in the age span studies. **Copy seen:** DLC.

30863. MORANT, GEOFFREY McKAY. A contribution to Eskimo craniology based on previously published measurements. (*Biometrika*, 1937. v. 29, pt. 1-2, p. 1-20, tables)

Contains statistical evaluation and finding of coefficients of racial likeness for the Eskimo skulls, based on material collected and published by M. Fürst and F. Hansen, and A. Hrdlička (*Arctic Bibliography*, No. 7473 and 7482). Mean measurements of groups or series are given in tabular form. Comparisons of single characters of skull, also comparisons between Eskimo and Asiatic series (Chukchis and others) are included. On the origin of the Eskimo race, the author

says: "In spite of the striking resemblance of the Chancelade to modern Eskimo skulls, there is no race known to have existed in Europe since palaeolithic times which is closely similar to that of the northern people. It is to be expected, however, that close affinities will be found with certain American and Asiatic races" p. 18). **Copy seen:** DLC.

30864. MORANT, GEOFFREY McKAY. Studies of palaeolithic man, I. The Chancelade skull and its relation to the modern Eskimo skull. (Annals of eugenics, 1926. v. 1, pt. 3-4, p. 257-76, tables, diagrs., 10 plates)

Contains measurements of Eskimo crania (mean measurements and coefficients calculated from the material published by M. Fürst and F. Hansen, A. Hrdlička and others) and comparison with measurements of the Chancelade skull, made by the author. Conclusions: the Chancelade appears to be an Eskimo skull differing from the mean type of that people in very few ways; the detailed comparison of the Chancelade skull and mandible with the Greenland Eskimo type shows that the two are similar in many respects; we may therefore assume that in the Magdalenian period, a race of reindeer hunters existed in southern Europe, which ultimately migrated northwards following the reindeer, or was pushed to the fringe by other invading races. Drawings and photos on plates show the Chancelade skull in comparison with that of a typical Eskimo.

30865. MORDVILKO, ALEKSANDR KONSTANTINOVICH, 1867-1938. Na-sëkomýâ poluzhestkokrylyâ (Insecta Hemiptera), t. 1, vyp. 1-2. Aphidodea. Petrograd, 1914-1919. clxiv, 236, 9 p. illus. (93 fig.); p. 237-508, illus. (55 figs.) (In: Fauna SSSR. Insecta Hemiptera, t. 1, vyp. 1-2) about 450 rets. **Title tr.:** Hemipterous insects. Aphidodea.

Contains in the introductory part: historical notes (p. v-xxv); a bibliography (83 items) and a critical review of more important works on the systematics of plant lice, Aphidodea, (p. xxvi-lxiv); data on their systematics and morphology (p. lxiv-cxlv); a bibliography on their morphology, anatomy and fauna (ca. 350 items). In the special part (p. 1-508) are keys, Latin diagnoses, descriptions, syno-

nym, literature references, lists of specimens in the Zoological Museum of the Academy of Sciences U.S.S.R., dimensions, data on distribution in the U.S.S.R. and adjoining countries, and on host plants and life cycle of lice. A few species native to northern regions of European and Asiatic Russia are included. The study is to be continued in v. 1, vyp. 3. **Copy seen:** DLC; MH-Z.

30866. MORDVINOV, A. Inorodskîye. obitaushchie v Turukhanskom kraïe. (Vsesoûznoe geograficheskoe obshchestvo. Vîstnik, 1860. t. 28, ottdel 2, p. 25-64) **Title tr.:** Natives living in the Turukhansk district.

Demographic sketch, giving names of native family groups or clans, number of individuals in each group at that time, and the territory where they nomadized (among the natives studied, only the Yakuts were settled people). Ethnographical data are given on Tungus (p. 32-40), Ostyaks of the Taz River (p. 40-44), Samoyeds (p. 44-53), and Yakuts (p. 53-54). Their physical appearance, occupation, clothing and dwellings, tents and sledges, wedding and funeral customs, folk poetry and arts, etc., are described. Details are presented (p. 55-64) on the indigenous religion and shamanism and on the activities of the Orthodox Church among the natives.

30877. MORRISON, PETER REED, 1919-, and W. J. TEITZ. Observations on food consumption and preference in four Alaskan mammals. (Arctic, Mar. 1953. v. 6, no. 1, p. 52-57, diagrs., tables)

Contains report of a study made during Oct.-Nov. in Wisconsin where animals captured two months earlier in Alaska, were maintained in captivity. Alaskan ground squirrels, Dawson red-back voles, Alaskan collared lemmings and pikas were fed both fresh and dry food and their water intake, caloric intake and food preferences studied. There was little agreement among the various species in food preference; caloric intake was in general greater per weight unit in small

than in large animals. Simple food consumption values are shown to be a fairly reliable measure of metabolic requirements and output in wild animals. The lemmings' catholic taste is noted as a factor favorable for survival in rigorous environment. For other papers from this study see *Arctic Bibliography*, No. 26500-26501.

30890. MOWREY, FRED HOWENSTEIN, 1905-, and **P. J. FARAGO**. Clinical aspects of cold injury. (Military surgeon, Apr. 1952. v. 110, p. 249-53)

Contains a brief résumé of the authors' clinical experience with 593 cases of frostbite. Following are some of the conclusions drawn: long observation is required accurately to determine tissue damage; conservative therapy is consequently indicated. Necrotic eschars on digits should be bivalved early to prevent contraction and further tissue damage. Hexamethonium is a most effective vasodilator; oral prisolone the next most effective; but vasodilators were found to have no effect on the rate of healing. The effects of ACTH, cortisone, oint-

ments, saline soaks, etc., are also discussed.

30891. MOXHAM, ROBERT MORGAN, 1919-, and **W. S. WEST**. Radioactivity investigations in the Serpentine-Kougarok area, Seward Peninsula, Alaska, 1946. Washington, D. C., 1953. 11 p. 2 sketch maps, 2 tables. (U. S. Geological Survey. Circular 265) 10 refs.

Contains results of a search for lode and placer deposits of radioactive minerals. Small amounts of radioactive material were found scattered through granite masses. Four variants of normal granite were recognized and are briefly described, as are the radioactive minerals found. No deposits of commercial value were discovered. *Copied seen:* DGS.

30892. MOXHAM, ROBERT MORGAN, 1919-, and **A. E. NELSON**. Reconnaissance for radioactive deposits in south-central Alaska, 1947-49. Washington, D. C., 1952. 14 p. 6 maps (2 fold.) 3 tables. (U. S. Geological Survey. Circular 184) 13 refs.

Contains three papers giving results of field work of U. S. Geological Survey parties. Pt. 1. *Reconnaissance for radioactive deposits in areas adjacent to highways in south-central Alaska during 1947*. Areas covered along the Glenn, Richardson, and Edgerton highways included the southeastern part of the Wrangell Mountains, the Bremner, Nizina, Klutina, Valdez, and Anchorage districts of the Chugach Mountains, the Wasilla district of the Talkeetna Mountains, and the Matanuska valley.

Pt. 2. *Radioactive pegmatite minerals in the Willow Creek mining district*. The area, studied in 1948 and 1949, is located in the southern Talkeetna Mountains about 50 miles north of Anchorage and includes the headwaters of Willow Creek and Little Susitna River.

Pt. 3. *Radioactive minerals in the Yakataga beach placers*. The area, studied in 1948, is located on the coast of the Gulf of Alaska about 50 miles east-southeast of Cordova. The geology, mineral deposits and mining, and radioactivity studies of each district are discussed. Tables show location, type of material, and radioactivity data on samples collected. None of the areas studied constituted feasible sources of supply of radioactive minerals. *Copied seen:* DGS

30893. MOXHAM, ROBERT MORGAN, 1919-, and **A. E. NELSON**. Recon-

naissance for radioactive deposits in the southern Cook Inlet region, Alaska, 1949. Washington, D. C., 1952. 7 p. 2 maps (1 fold.), 3 tables. (U. S. Geological Survey. Circular 207) 6 refs.

The Iliamna Lake - Lake Clark region at the northern end of the Alaska Peninsula, about 200 miles southwest of Anchorage, and the Jakalof Bay area on the southwestern tip of Kenai Peninsula were investigated. A brief summary of the geology, mining activities, and radioactivity investigations in each area is given. No radioactive materials of any importance were found in either region. Tables give data on samples collected.

The intrusion on Skaergaard Peninsula (68°10' N. 31°40' W.) is a strongly differentiated layered gabbro complex of Tertiary age. Previous work on rocks of the intrusion is outlined, followed by a detailed description of the chemical and optical properties of the clinopyroxenes and the crystallization sequence from the original magma. Tables give chemical analyses, and diagrams show relation of the clinopyroxenes to associated minerals.

Contains report on a collection made by D. T. Donovan, q. v., on Traill Ø in 1950 during the Danish East Greenland Expedition. Five species and their localities are described in detail, and previous records of Jurassic and Cretaceous brachiopods from East Greenland are discussed. The fauna seem to be related to those of central and south-eastern Europe.

Contains review of events connected with the voyage of the S/S *Grønland* to Scoresbysund on East Greenland, 25 years earlier. Author, who was a participant in this expedition to establish a colony there, recalls that public opinion was antagonistic to the enterprise, headed by Ejnar Mikkelsen; and stresses that the latter's initiative and persistence have been justified. *Copy seen*: DLC.

30901. MUNCK, FERNAND. Gravimétrie. (In: Expéditions polaires françaises. Expédition arctique, 1948-1951. Campagne au Groenland 1950; rapports préliminaires, 1952. Série scientifique no. 15, p. 57-64, incl. 3 illus. on plate, 2 fold. profiles, map) 9 refs. *Title tr.*: Gravimetry.

Contains the results of a gravimetric survey on the Greenland icecap, summer 1950. The equipment is described and an outline given of the projected program and work actually accomplished. Consecutive sections deal with: (1) the gravimetric link, Paris-Greenland, (2) a gravimetric survey over the inland ice from Cecilia Nunatak on the east coast to Station G14 on the west coast, (3) measurements of terrestrial tides and (4) gravimetric measurements in Iceland. *Copy seen*: CaMAI.

30902. MUNKÁCSI, BERNÁT, 1860-1937. Bericht über meine linguistische Studienreise im Lande der Wogulen. (Ungarische Revue, 1890. Jahrg. 10, p. 369-98, 588-611) *Title tr.*: Report on my trip for linguistic studies in the land of the Voguls.

Contains an account on a trip, Apr. 5, 1888-Apr. 30, 1889, with the anthropologist, Károly Pápai, sponsored by the Hungarian Academy of Sciences. Author's task was to learn the south Vogulian dialect in which many epic songs had been noted down by Antal Reguly some fifty years previously, an almost extinct dialect, which no one could read. Munkácsi succeeded in finding the last family which still spoke this dialect in the village of Pershina at the mouth of the Ivdlil River (about 60° N.). Thus Reguly's texts were made intelligible. Many new texts of mythological and heroic songs, legends of origin, prayers, bear and dance songs, etc., were also written down, from the Voguls of the Loz'va (Perschina village), Sos'va (Yugra or Isker village), Konda (Satigi village), and other places. Munkácsi visited almost all the places inhabited by Voguls in the regions of the rivers Loz'va, Tavda, Konda, Pelymka, the Severnaya Sos'va, and Sygva. Folklore, grammatical and lexical materials were collected. A description is given of a sacrificial feast of the upper Loz'va Voguls, and a prayer before a journey to the water spirits of Loz'va is quoted (p. 601-603). Pápai traveled separately and made anthropological and folkloristic investigations among the Ostyak Samoyeds of Vasyugan, the Ostyaks of Surgut and Berezov, the Samoyeds of Obdorsk; he met with Tungus at Yoganskoye etc. *Copy seen*: DLC.

30903. MUNKÁCSI, BERNÁT, 1860-1937. Die heidnische Ureligion der Wogulen. (Ungarische Revue, 1893. Jahrg. 13, p. 221) *Title tr.*: The ancient heathen religion of the Voguls.

Contains summary of a lecture: the worship of nature (heavens and black mother earth), the spirits and heroes, veneration of animals (bear and elk), blood sacrifices, beliefs on life after death, and spiritual poetry are briefly mentioned. Features common to Vogulian and Hungarian mythological beliefs are indicated. *Copy seen*: DLC.

30904. MUNKÁCSI, BERNÁT, 1860-1937. Kosmogonische Sagen der Wogulen. (Ethnologische Mitteilungen aus Ungarn, 1891, Jahrg. 2, Heft 2-5, p. 68-79; Heft 6-8, p. 105-133; 1892, Heft 9-10, p. 255-61) *Title tr.*: The cosmogonic legends of the Voguls.

Contains German translation of Vogul legends in prose and verse on the origin of earth, on the deluge (in verse), on the

world's fire, on taking down the earth from the sky (in verse), and on creation of earth and heaven (in verse). The legends were written down during author's trip to the Voguls in 1888-89 (itinerary is given by K. Pápai, q. v.).

Copy seen: DLC.

30905. MUNKÁCSI, BERNÁT, 1860-1937. Über die heidnische Religion der Wogulen. (Ethnologische Mitteilungen aus Ungarn, 1893. Bd. 3, Heft 3-4, p. 61-70; Heft 5-6, p. 124-28; Heft 7-8, p. 181-88) 4 refs. **Title tr.:** On the heathen religion of the Voguls.

Contains in the introduction, an historical sketch of the Russian conquest and christianization of the Voguls, with text (in German) of a folk song on the event. The old Vogulian religious beliefs which still survived in the upper Konda and Severnaya Sos'va regions are then dealt with: names and functions of deities, sacrificial practices, sacred places, taboos, life after death, feasts, mythological folk poetry in verse and prose (cosmogonic and theogonic legends and songs, hymns and incantations, heroic songs); and mythological terms are investigated with references to other Finno-Ugric peoples.

Contains a list of seven species of the arthropodous genus *Lithobius* (group Myriapoda) collected on the shores of Mezen' Bay (White Sea) and on Kanin Peninsula, including Latin diagnoses of *L. caninensis*, *L. litoralis*, *L. ignotus* and *L. fallax* n. spp. **Copy seen:** MH-Z.

30908. MURASHEV, D. Kol'skiĭ polustrov kak rudno-syr'evaya baza. (Razvedka nedr, 1933, no. 1, p. 13-15) **Title tr.:** Kola Peninsula as a raw mineral base.

Contains a general description of various mineral deposits of the Khibiny tundras with Khibinogorsk (now Kirovsk) as a center of the mining industry. Important iron ore deposits occur in the Zaimandrovskiy region based on the Olen'ya railroad station. In the Monche and Voleh'ya Tundras, intrusion of norite and peridotite-pyroxenite occur as sulfides of copper, nickel and iron. Apatite-nepheline occurs in important quantities in the Khibiny tundras.

30909. MURDOCK, GEORGE PETER, 1897- . Rank and potlatch among the Haida. New Haven, Yale University Press, 1936. 20 p. (Yale University. Publications in anthropology, no. 13) 5 refs.

Contains a description and explanations of potlatch ceremonies as integrated with the system of rank: in both chiefship and the social status of "noble" the potlatch is the decisive factor, but in different ways. Descriptions are given of five types of potlatches, those of house-building, totem pole, funeral, vengeance, and face-saving. The custom of tattooing, the origin and power of chieftains, and the "social classes" are outlined. The potlatch-status complex prevails also among the Tlingits of the islands as far north as Sitka, and apparently was borrowed from the Haida. The paper is based on material collected by the author among the Haida at Masset (mainly) and Skidegate in the Queen Charlotte Islands, and at Hyaburg in Alaska.

30915. MURZINA, A. I. Mansi (voguly) v XVIII veke i pervoi polovine XIX veka. (Leningrad. Universitet. Uche-nye zapiski, 1953, no. 157, Seriia fakul'teta narodov Severa, vyp. 2, Iazyki i istoriia narodnostei Krainego Severa SSSR, p. 215-36, tables) 18 refs. **Title tr.:** Voguls in the 18th and first half of the 19th century.

Contains a review of investigations on the Vogul language, ethnography, demography, and social organization, based on the literature and on material from archives in Leningrad, Tobol'sk, and Omsk. Emphasis is placed upon work of the Soviet period. Numbers of population from 1762 to 1897, Vogul economy, and social organization in the 18th-19th centuries are especially dealt with. An extensive (the last) chapter discusses the two Vogul phratries, *mos* and *por*, the possible remnants of the matrilineal social structure (based on folklore), and the last survivals of the former clan system: exogamy, family marks, the cult (including sacrifices and burial places) common to a certain family group, etc. Recent developments supposedly eradicated the remains of ancient phratries and clans,

replacing them with the social classes of the Marxian doctrine.

Copy seen: DLC.

30916. MUSACCHIA, XAVIER J. A study of the lipids in arctic migratory birds. (Condor, 1953. v. 55, no. 6, p. 305-312) 25 refs.

Deals with lipids from the tissues of the old-squaw duck (*Clangula hyemalis*), the golden plover (*Pluvialis dominica*), the red phalarope (*Phalaropus fulicarius*) and the red-backed sandpiper (*Erolia alpina*), summer residents in the Point Barrow region of arctic Alaska. Values for fatty acids of these birds are presented (tables 1-4). The lipid studies indicate that at the time of collection (late summer) there was a high level of fat turnover in all four species. The high level of lipid metabolism apparently is related to the increased storage of fat associated with periods of migration.

30921. NACHTIGALL, HORST, 1924- . Die erhöhte Bestattung in Nord- und Hochasien. (Anthropos, ephemeris, 1953. v. 48, no. 1-2, p. 44-70) 52 refs. **Title tr.:** The elevated burial in northern and central Asia.

An ethnological study based on the literature. The custom of disposing of the dead on a tree or platform is described as it occurs among the Samoyeds, Tungus, Yukaghirs, Ostyaks, Orochis, Gilyaks, Yakuts, Altaians and other Asiatic peoples. Shamans and chieftains as a rule received the platform burial, and the bodies of children were placed on trees. An attempt is made to explain the origin and meaning of the custom: the frozen ground is not sufficient explanation; the custom had some connection with the hunter's sacrificial practices and treatment of the bones of killed animals, with beliefs in the soul, resurrection and the heavenly abode of the dead.

Copy seen: DSI.

30922. NACHTIGALL, HORST, 1924- . Die kulturhistorische Wurzel der Schamanenskelettierung. (Zeitschrift für Ethnologie, 1952. Bd. 77, Heft 2, p. 188-97) 30 refs. **Title tr.:** The cultural-historical roots of the dismemberment of shamans.

Contains discussion on the origin and meaning of certain beliefs and narratives according to which a candidate to the shaman's position is supposedly decapitated by spirits, his flesh taken from the bones, cut to pieces, and eaten by spirits. He is subsequently restored to life by the spirits, however, and can then shamanize and derive assistance from the spirits who ate his flesh. The belief in the shaman's dissection and restoration is based on the ideology of hunters, not on that of agriculturists and their human sacrifices. Corresponding beliefs on the shaman's initiation as found among the Yakuts, Yurak-Samoyeds and Tungus are quoted, reference is made to the Gilyak bear ceremonies; also to shaman's intimate relationship with the eagle, representing the sun-god, and a tree.

30928. NAGEL', A. A. K voprosu o zinnem rezhime malykh i srednikh rek Vostochnoi Sibiri. (Meteorologiya i gidrologiya, 1939. t. 5, no. 10-11, p. 92-99, diags.) 4 refs. **Title tr.:** Concerning the winter régime of small and medium rivers in eastern Siberia.

"Observations made along the Krestovka River valley (in the vicinity of Angara region) during the winter and spring of 1937 revealed the presence of large ice mounds scattered along the river. Studies of these mounds showed that they were formed by the freezing of successive layers of water seeping from fissures in the river ice. A majority of the icings were encountered at points along rapids, where accumulation of anchor and frazil ice and its subsequent freezing blocked the water flow underneath the ice. Theories on prevention of icing mound formation are presented."—SIPRE.

30931. NAKAYA, UKICHIRO. A method of analyzing geothermal data in permafrost. Wilmette, Ill., Aug. 1953. 7 p. 3 graphs, 2 tables. (U. S. Army. Corps of Engineers. Snow, Ice and Permafrost Research Establishment. Research paper, 5) ref.

"The empirical formula of hyperbolic form developed by MacCarthy to obtain undisturbed or equilibrium temperatures from geothermal measurements in permafrost is criticized. The rate of cooling, after an initial period, is expressed as a function of the difference between the observed and undisturbed temperatures. Extrapolation of this formula to infinity is permissible and can be accomplished with suitable computing equipment. A method of successive approximation for calculating the equilibrium temperature without special devices is presented. The calculations are made on the assumption of constant permafrost temperature at a

given location. Effects of any secular variation in the permafrost temperature are discussed."—SIPRE.

30932. NAKAYA, UKICHIRŌ, and J. SUGAYA. A report on permafrost surveying, Manchuria, 1943. Translated from Japanese text pub. in Teion-Kagaku, 1949, v. 2, p. 119-28, by E. R. Hope. Ottawa, Defence Scientific Information Service, Jan. 24, 1953. 11 p. tables, graphs, diagrs. (National Research Council of Canada. Technical Translation TT-382)

"The distribution of ground temperatures in permafrost in early autumn when the active layer has melted to a maximum depth was studied to evaluate the hardness of the upper layer of the permafrost and to estimate the solidity of foundations. Thermo-couples were inserted into holes bored through the permafrost to 3 m. below the frozen surface. The temperature is close to 0° C. in the upper part of the frozen layer, -0.3° C. at 1 m. below the frost line, and remains above -0.4° C. to a depth of several m. Temperature measurements at the ground surface and at depths of 10 and 20 cm. gave a value of 0.005 c.g.s. units for the coefficient of thermal diffusion in the active layer in the thawed state. The character of the soil in the thaw layer and in the frost layer was examined. The fine particles wash out of the active layer when it thaws. Permafrost forms by cooling from above. A frost-heaving ratio of 8 percent was calculated for a sample obtained at 2.68 m. below the surface, or 0.58 m. in the frost layer."—SIPRE.

Contains a report of a case in a nine-month-old child, caused by excessive intake of a vitamin A preparation. Clinical findings were in most respects similar to previously reported cases and relief came promptly after the vitamin A sources were discontinued. Faulty elimination is assumed to be a contributory factor in the present case. **Copy seen:** DLC.

30949. NAZAROV, V. S. Historical variation of ice-conditions in the Kara Sea. Translated . . . by E. Hope. Ottawa, 1950. 4 p. diagr., table. (Canada. Defence Research Board. Scientific Intelligence Division, April 26, 1950) 7 refs. Translation of *Arctic Bibliography*, No. 12131.

Contains the results of a study of ice records for the Kara Sea from 1580 to 1946. From the information available, years of definitely severe or definitely light ice conditions were used as limits upon which to construct a scale. Ice conditions were then graded for each year, as: light (-1), very light (-2), severe (+1), very severe (+2). These data are tabulated for the 366-year period, and a curve constructed showing variation of ice in the Kara Sea. The curve is extrapolated to 1989. It shows that periods with severe ice conditions occurred at 100-year intervals, 1620-29, 1720-29, 1820-29, 1920-29. It also indicates that the normal state of the Kara Sea is "one of comparatively light ice", as out of 366 years, only 140 may be characterized as severe ice years. **Copy seen:** CaMAI.

30950. NAZAROV, V. S. Opyt ucheta vozdushnykh potokov dlia ledovykh prognozov. (Meteorologiya i gidrologiya, 1938. t. 4, no. 4, p. 118-21) *Title tr.:* Experimental calculation of air current intensities for ice forecasts.

"The influence of air currents on the movement of ice fields is recognized. Experiments were conducted to determine the prevalence of wind over a day, month, and year for Dikson and Uyedeniya Island meteorological stations. The observations were plotted to present wind as a vector of forces for any given period. Data for the 1917 to 1931 period show that the vector of wind pull at Dikson station was equal 1.7 m/sec. and

its direction was from south to north."—SIPRE.

30952. NEDZEL, ALEXANDER JOHN, 1888- , and others. Effects of body chilling upon the blood vessels of denervated and intact kidneys in dogs and rabbits. Preliminary report. (Journal of aviation medicine, Feb. 1952. v. 23, no. 1, p. 49-53, illus., tables) 5 refs. *Other authors:* D. Van Dam, and M. Ovrik.

Chilling of the animal body caused some vasoconstriction in the intact kidney, which was particularly noted in the cortical area. No changes were observed in the denervated kidney. Vasoconstriction in the intact kidney was accompanied by an irregular flow or stoppage or urine. The possibility is discussed that the above changes may lead to localization of blood-borne bacteria in the kidney, or to various types of "nephritis due to cold". **Copy seen:** DSG.

30953. NEDZEL, ALEXANDER JOHN, 1888- . Sulfathiazole and exposure to cold. (Urologic and cutaneous review, Apr. 1945. v. 49, p. 235-37, 2 graphs)

Contains an account of experiments with dogs, designed to ascertain the influence of repeated exposure to cold on the effect of sulfathiazole, especially on the kidney. Both gross and microscopic studies of the kidney were made. It is concluded that exposure to cold renders the drug more toxic to the body because of the latter's lowered resistance.

30960. NEKRASOV, PETR IL'ICH. Klimat nechernozemnoi polosy. Moskva, 1937. 40 p. tables **Title tr.:** Climate of the non-chernozem area.

"Air temperature, precipitation and snow-cover data from 45 stations are tabulated and discussed. The non-

chernozem area of European U.S.S.R. is located north of 52°-53° N. lat. The northern tundra (and forest tundra) zone, which borders on the White and Barents Seas, is characterized by long, severe winters with violent snowstorms, relatively scant precipitation, and permanent frost . . . Snow covers the tundra zone for an average of 260-280 days."—SIPRE.

A geodetic survey on the inland ice, continuing that of 1949, was carried out by a four-man party led by the writer, between June 7 and Sept. 4, 1950. Surveying and transportation equipment is listed and a chronological account given of the area covered and work done. Comments are made upon the practicality of survey equipment used and problems encountered. Methods and techniques of leveling, calculating absolute and relative displacement of the inland ice, mapping the topography in the ablation region, and determining a route and setting up survey poles in the Camp IV-V ablation region and the Camp VI region are discussed. A diagram and tables show results of the work. A map (between p. 6-7) shows the area covered and routes taken. **Copy seen:** CaMAL.

30978. NEY, C. H. Control for arctic mapping. (In: American Society of Photogrammetry. Panel on arctic mapping. pub. in Photogrammetric engineering, June 1943. v. 19, no. 3, p. 392-95)

Contains a discussion of methods for establishing mapping control in the Arctic, with examples from work in Canada. Methods may be classified as astronomic, electronic, and direct measurement. These are discussed and their advantages and disadvantages noted. Vertical control, organization of survey units, transportation, supply, and radio communications are also noted. Author is Assistant Dominion Geodesist.

30979. NICHOL, JAMES T. The effect of temperature on the circulation of the isolated perfused rabbit ear. (Canadian journal of medical sciences, Aug. 1952. v. 30, no. 4, p. 340-52, illus., tables) 27 refs.

Contains an account of experiments on ears perfused with Ringer solution at temperatures ranging from 40° to 0° C. Changes of flow observed at different temperatures could be quantitatively explained by changes in viscosity of the perfusate with temperature. No "hunting reaction" to cold was evident either with, or without a temperature gradient in the ear. The residual "critical closing pressure" of the ear was shown to be independent of temperature.

30980. NICHOLS, JOHN TREADWELL, 1883-, and A. MAXWELL. A probably undescribed codfish from arctic America. (Copeia, 1933, no. 1, p. 26)

Contains a description of a small cod, *Boreogadus pearyi*, n. sp., two specimens of which were "obtained in Lincoln Bay, arctic America (Greenland sector) by Peary in 1906".

Copy seen: MH-Z.

30981. NICHOLS, ROBERT LESLIE, 1904- . Geomorphologic observations at Thule, Greenland and Resolute Bay, Cornwallis Island, N. W. T. (American journal of science, Apr. 1953. v. 251, no. 4, p. 268-75, illus., diag.) 6 refs.

Contains observations made during ten days' field work, summer 1948. "The Greenland ice cap at the present time terminates about 12 miles east of Thule, Greenland. In Wisconsin time it probably extended 20 to 30 miles to the west, beyond the present coastline. The marine limit at Thule is approximately 130 feet above sea level. Solution-faceted pebbles, ice furrows, and stone circles are found on the elevated beaches and some of them are buried by solifluction sheets. Solution-faceted pebbles, surface efflorescences, and rainfall records indicate that the climate for a good part of the interval since glaciation has been arid.

"The presence of eight extensive well-planed, smoothed, striated, and weathered outcrops at Resolute Bay, Cornwallis Island proves that the island was glaciated. The marine limit is approximately 545 feet above sea level. Frost mounds, stone polygons and ice furrows are found on the elevated beaches and permafrost is present two feet below the surface."—Author's abstract.

Contains a chronological summary of explorers and expeditions to the Canadian Arctic and an evaluation of their contribution to present maps. Knowledge of the Ancient World and Middle Ages about the Arctic is briefly noted. Voyages and discoveries from those of Fro-bisher and Davis in the late 16th century, through the succeeding centuries are outlined, through the search for the North-

west Passage, the search for Franklin, the whaling industry in the 19th century, and the assault on the Pole. Finally the activities of the Canadian Government in the North since 1881 are summarized.

30985. NIELSEN, EIGIL, 1910- . A preliminary note on *Bobasatrania groenlandica*. (Dansk geologisk forening. Meddelelser, 1952. Bd. 12, hefte 2, p. 197-204, illus.)

Contains a preliminary description of a Triassic fish, *Bobasatrania groenlandica*, of a genus of deep-bodied ganoids, represented in the author's collection by more than 800 specimens from the Triassic of East Greenland; deals chiefly with the head of that fish, of which a fairly complete restoration (figs. 1-2) is given.

Copy seen: MH-Z.

30986. NIELSEN, FREDERIK, 1881- . Grønlands kultur. (In: Turistforeningen for Danmark. Årbog 1952-53, pub. 1952. p. 65-88, illus.) **Title tr.:** Greenland's culture.

Contains a popular account of Eskimo life: the old tribe had its unwritten laws;

controversies were settled by impromptu song competitions, and the courtesies of life were well developed. The old sagas and tales of the Greenlanders reveal a knowledge of the North American Indians. Their expression in art includes a primitive kind of poetry, as well as their better known wood and bone carving. The first newspaper in the Greenlandic language appeared in 1900. The Greenlanders are fond of reading, and illiteracy is non-existent among them in spite of the fact that only some ten percent have command of the Danish language. The latter however, and Danish culture generally appear to be becoming adopted.

30988. NIELSEN, LAWRENCE E., and others. Progress report, Juneau Ice Field Research Project, Alaska, 1953. New York, American Geographical Society, Dec. 1953. 61 p. sketch map, tables. Mimeographed. 3 refs. **Other authors:** J. H. Hickey, R. C. Hubley, R. L. Pierce, A. P. Muntz, and A. S. Post.

Contains report on work and observations of an eight-man party led by L. E. Nielsen during June 17-Sept. 4, 1953. Area covered included Lemon Creek Glacier, Taku Glacier drainage, and the Taku valley vicinity of the termini of Taku and Norris Glaciers. Notes on logistics, equipment and rations, and a medical report are given. Glaciology, meteorology, and geobotanical work (to determine height of glaciers emanating from the Juneau Ice Field during the late

postglacial maximum) are discussed in some detail. A discussion of recent geomorphic history of part of the Taku Inlet - River valley and of the surveying program is included. Scientific accomplishments and recommendations for future work are listed.

30989. NIELSEN, YNGVAR, 1843-1916. Die lappische Völkerwanderung vom 17. bis 19. Jahrhundert; ein Kulturkampf zwischen Nomaden und Ackerbauern. (Globus, 1891. Bd. 59, no. 14, p. 211-15, 3 illus., map) 6 refs. **Title tr.:** The Lapp migration from the 17th to the 19th centuries; a cultural struggle between the nomads and the agriculturists.

Contains account of the increase of the Lapp population, their migration southward in search of new pastures, and consequent conflicts with the Norwegian farmers. The boundary of their old territory lay between Trondhjem and Meråker, but Lapps, mostly from Sweden, made numerous invasions down to the 62° N. lat., and since 1877 settled in various places in Härjedalen parish. In 1890 Lapps with reindeer herds traveled to Hardangervidda (near 60° N.) causing new conflicts with Norwegian farmers. A Lapp can be either a reindeer nomad, or a beggar, states the author, he cannot become a settled agriculturist.

30991. NIKOLAEV, N. G., and A. M. RUBIN. Ledovyl' pokrov i obrazovaniiä donnogo l'da. (Spravochnik po vodnym resursam SSSR, 1936. t. 17, p. 322-34, tables, map, graphs) **Title tr.:** The ice cover and the formation of anchor ice.

"Heavy frosts, thin snow cover, and permafrost contribute to the extensive ice formation on rivers in Yakutia. Rivers as large as the Yana, Zeya, and Indigirka are often frozen solidly at many places. Extensive formation of river naleds occurs over the ice cover of frozen river sections. A naled, 26 km. long, 6-7 km. wide and up to 4 m. thick, was observed in the winter of 1927-28 on the Kegelli River (Indigirka basin). Naleds up to 18 sq. km. are common. Excessive anchor ice produces naleds by blocking the narrow parts of the river. A mean ice thickness of 70-100 cm. occurs in the south, 235 cm. and over north of Yakutia. The ice on the Lena River near Bulun was 280 cm. thick during the winter of 1901-1902. Tabulated data on the Vilyuy River indicate that ice thickness depends on air temperature, depth of snow cover, and intensity of anchor ice formation."—SIPRE. **Copy seen:** DLC.

30992. NIKOL'SKIĬ, ALEKSANDR MIKHAILOVICH, 1858- Presmykaniushchiesia, Reptilia. t. 1, Chelonia i Sauria; t. 2, Ophidia. Petrograd, 1915-16.) 2 v. v. 1: vi, III, 532, illus. (69 fig.), 9 plates; v. 2: III, 349 p. illus. (64 fig.), 8 plates. (In: Fauna SSSR. Reptilia, t. 1-2) **Title tr.:** Reptiles. vol. 1, Chelonia and Sauria; vol. 2, Ophidia.

Contains in v. 1, the tables for the determination of subclasses, orders, families, and genera of turtles (Chelonia) and lizards (Sauria) of Russia and adjoining countries; and descriptions of ten species of turtles and 133 species of lizards, with brief Latin and Russian diagnoses, synonyms, citations of specimens in the Zoological Museum of the Academy of Sciences U.S.S.R., and data on geographic distribution, biology and ecology.

Vol. 2 deals with 66 species of snakes (Ophidia) (p. 1-285); gives a general and regional survey of the reptiles (p. 286-318); also additions and corrections; index of zoological names. Three species only occur in the North (the taiga zone): *Lacerta vivipara*, *Coluber berus* and *Anguis*

fragilis; the first, native to the taiga, occurs also in the tundra zone.

30994. NIKOL'SKIĬ, D. P. *Ospirnykh napitkakh sredi nashikh inorodtsev*. (Leningrad. Voenno-meditsinskaiĭ akademiĭa. Antropologicheskoe obshchestvo. Trudy, 1897-99, *pub.* 1901. t. 5, p. 221-86) 70 refs. **Title tr.:** On the alcoholic beverages among our natives.

Contains a survey based on literature of the intoxicating beverages, home-made and imported (Russian vodka), used among the natives of Russia: the names of the drinks, their preparation and use, natives' inclination to alcohol, etc., are described. Among others, the following northern peoples are treated: Lapps, Voguls and Ostyaks, Samoyeds and Karagas (p. 237-42), Yakuts (p. 260-61), the Chukchis and Kamchadals (p. 273-74). Selling of vodka to the northern natives was prohibited, but the law was not observed and the natives suffered from alcoholism, also economic exploitation. The sellers of vodka were Zyryans, Yakuts, and the Old Russian settlers (Cossacks). Among native drinks, the making and use of kumiss is described (p. 245-51); also kvass, beer and brandy made by Permians (p. 226-29); an intoxicant made of poisonous mushrooms by Chukchis and Kamchadals, and a drink made of birch sap by Kamchadals (p. 273-74). Notes on the use of tobacco are also included.

30995. NIKOL'SKIĬ, G. V. *O biologicheskoi spetsifike faunisticheskikh kom-*

pleksov i znachenie ikh analiza dlia zoogeografii. (*In*: *Ocherki po ikhtiologii*, 1953, p. 65-76) 22 refs. *Originally pub. in*: *Zoologicheskii zhurnal*, 1947, t. 26, vyp. 3, p. 221-31. **Title tr.:** On the biological specification of faunistic complexes and the importance of their analysis for zoogeography.

Discussion of the principles of zoogeographic analysis of the fauna, based on the study of so-called faunistic complexes, i. e. groups of species of common geographic origin which are adaptive to environmental conditions of a specific natural zone. The faunistic fish complexes of various zones, among them the arctic seas, arctic fresh-water zone, and boreal fresh-water zone, are included in this investigation (see tables). It is stressed that the main aim of zoogeography is analysis of the genetic composition of the fauna, and study of its faunistic complexes, their history and relationship with other complexes.

NIKOL'SKIĬ, VLADIMIR KAPITONOVICH, 1844, *editor*, see *Tsentral'nyi muzei narodovedeniĭa, Moskva*. *Religioznye verovaniĭa narodov SSSR*. 1931. No. 32550.

30996. NIPPGEN, JOSEPH. *Le folklore des Eskimos, ses caractères généraux*. (*Revue d'ethnographie et des traditions populaires*, 1923. t. 4, no. 14, p. 188-92) **Title tr.:** The folklore of the Eskimos, its general characteristics.

Contains analysis of Angmagssalik tales, published by Knud Rasmussen (see *Arctic Bibliography*, No. 14187). Nippgen finds that several of these East Greenland Eskimo tales have great similarity to those of Déné Indians in Alaska. They have also themes and motives well known in other places, including Europe, e. g. the magic flight, search for lost relatives, visit to the subterranean world of the dead, tales of origin, etc. The Eskimo story-teller is able to extend his recital by developing details or combining several adventures into one narrative. The magic powers play an important role in the Eskimo tales and the latter's external world is full of anthropomorphic features.

30997. NISSEN, NIS WALTER. *Die südwestgrönländische Landschaft und das Siedlungsgebiet der Normannen*. Hamburg, L. Friederichsen & Co. in

Komm., 1924. vi p., 1 l., 112 p. 12 plates, maps. (Hamburg. Universität. Abhandlungen aus dem Gebiet der auslandkunde . . . Bd. 15. Reihe c Naturwissenschaften. Bd. 5) 171 refs. **Title tr.:** The landscapes of southwest Greenland and the regions settled by the Norsemen.

The landscape types of southwest Greenland (tundra, inland ice, subpolar meadowlands, etc.) are described and their impact on the culture of the Norsemen during the Middle Ages is discussed. The two main Norse colonies were Österbygd (60°–62° N.) and Vesterbygd (64°–65° N.). The Norsemen thrived best in the Igaliko landscape of the Österbygd colony, which has the highest summer temperatures in all Greenland. Their culture flourished as long as they were in contact with the settlers on Iceland, but in the second half of the 13th century, trade with Greenland became a monopoly of the Norwegian crown, and fewer and fewer ships reached Greenland. The last Greenland voyage probably occurred in 1410. Eventually the Norse colonies had to abandon cattle-raising and concentrate on hunting and fishing. They moved their settlements closer to the coast and lived more and more like the Eskimos, with whom they intermarried. The author holds that the archaeological remains of Norse culture in Greenland provide better material for the study of early Christianity in the North than those in Iceland and Scandinavia. Maps show the location of Norse ruins in both colonies.

30998. NOE-NYGAARD, ARNE, 1908–. Geological Survey of Greenland, 1946–1951. (Polar record, Jan. 1953. v. 6, no. 65, p. 671–72)

Contains a report on the genesis, interim work and establishment on April 1, 1951, of Grønlands Geologiske Undersøgelse, to conduct general reconnaissance, geological mapping, etc., and investigation of possible mineral resources. The first part of its work begun in 1946, aimed to gain soon a broad idea of the geology of Greenland, particularly of West Greenland; the second part, carried out by the author, has as its object to produce a geological outline map of the Precambrian rocks of West Greenland and to train young Danish petrologists; it is planned to cover within ten years the coast from Disko Bugt (69° N.) to Julianehaab

District (61° N.). A detailed summary of results so far obtained, is included.

30999. NOE-NYGAARD, ARNE, 1908–, and A. BERTHELSEN. On the structure of a high-metamorphic gneiss complex in West Greenland, with a general discussion on related problems. (Dansk geologisk forening. Meddelelser, 1952. Bd. 12, hefte 2, p. 250–65, illus., plate 6)

“An area within the central part of the pre-Cambrian mountain chain—the Nagssugtoqidian belt—recrystallized under granulite facies conditions in West Greenland has been investigated. It is shown that the folding style is simple and only indicative of moderate tangential compression, while the tectonics at a higher level recrystallized under amphibolite facies conditions is more complicated. In tabular form the main results are shown on p. 264, where folding style, regional facies and granitization (degranitization) has been put together and compared.”—Abstract, p. 250.

The area investigated is to the south of Nordre Strømfjord near the bend of the fiord (67°25' N.–67°45' N. 62°10' W.–53°35' W.). It is part of “Isortoq gneiss complex,” which includes the high-metamorphic rocks of the central part of the Nagssugtoqidian mountain chain. Summary in Danish.

31000. NOE-NYGAARD, ARNE, 1908–. Samples of volcanic rocks from the sea bottom between the Faroes and Iceland. (Geografiska annaler, 1949. Årg. 31, häfte 1–4, p. 348–56, table) 8 refs.

Contains description and chemical analyses of five samples of basalts and andesites, and discussion of the correlation of these samples with basalts of Greenland, Iceland, and the Faroes. A study of the titanium content of rocks in these areas may indicate that “the North Atlantic ridge had originally belonged to the land mass of Greenland, from which it later became wedged apart.”

31001. NØRLUND, POUL, 1888–1951. Viking settlers in Greenland and their descendants during five hundred years. With a foreword by Ellis H. Minns. London, Cambridge University Press, 1936. 160 p. 97 illus., maps. 25 refs. Translated by W. E. Calvert, from the

Danish original *De gamle nordbobygder ved verdens ende*, København 1934 (152 p.) copy in CST; 3d. ed. 1942 (153 p.) copy in IEN. German version: *Wikingersiedlungen in Grönland, ihre Entstehung und ihr Schicksal*, transl. by Joachim Blüthgen and Helge Kjaergaard. Leipzig, Curt Kabitzsch, 1937. 138 p. 98 illus., map.

Contains a popular account of the life and fate of the Icelandic settlers in Greenland in the Middle Ages, based on archaeological excavations made by author at Herjolfsnes in 1921-32 and continued by Aage Roussell. The colonization of Greenland by Norsemen in the 13th to 15th centuries is described: political history of the settlements, the Bishopric of Greenland, churches and cemeteries excavated, glimpses of spiritual life and superstition, life of the homesteads, the plans of living houses and cattle sheds; implements and utensils, navigation to Greenland, the Herjolfsnes garments for men and women (well-preserved robes, dresses, stockings, caps and hoods of the common people were retrieved), the feuds with skraelings (Eskimos) and the end of the Norsemen in Greenland. The colony ceased to exist around 1500 A. D. Several causes for its end may be considered: the climate became more severe and glaciers encroached upon the pastures; the children of the tall and strong Norsemen, lacking iron, fat and vitamins, grew stunted, twisted with rickets, weak of bone and brains (excavations of cemeteries show it); supplies from Europe ceased entirely; and the Eskimos did the rest: according to their own legends, some 1500 Eskimos burnt the last Norsemen of the main colony in their church. See also *Arctic Bibliography*, Nos. 12369, 12376, 12379, 14909, 14910.

31003. NORDNES, SVERRE, and T. SUND. Isavsmeltingen på Saltfjellet. (Norsk geografisk tidsskrift, 1953. Bd. 14, nr. 1/4, p. 165-204, illus., 5 sketch maps, diagr.) 64 refs. **Title tr.:** The downwastage of the inland ice in Saltfjellet.

Contains a description (by Nordnes) of glacial and proglacial features in an area in northern Norway between Saltfjord and Ranefjord just north of the Arctic Circle and west of the Scandinavian watershed. The greater part of the region is covered with glacial deposits, striations and friction cracks showing the ice to have moved west and northwest. Two longitudinal valleys, Lønsdalen in the east and Bjellådalen in the west, drain respectively north and south. Kame terraces, eskers, glacial lake deposits, and drumlins in both valleys are described and the drainage of the glacial lakes discussed. "The downwasting of the ice was found to be similar to that observed by other investigators in mountainous areas in southern Norway and in the middle and northern parts of Sweden." Tore Sund, who contributes also the introduction, deals (p. 189-201) with the general geology of the area around Nordre Bjellåvatn (lake) at the head of Bjellådalen. The dissipation of the last ice sheet in this region and the formation of an ice-dammed lake are discussed. A map shows the eskers, moraines, terraces, and deltas of the region. Summary in English, p. 187-88, 201-202.

31008. NORSKE INSTITUTT FOR KOSMISK FYSIKK. The auroral ob-servatory at Tromsø: results of magnetic observations for the year 1947. Bergen, John Grieg, 1949. 41 p. tables, diagrs. (*Its:* Publikasjoner, nr. 30). By Einar Tønsberg, and Steinar Berger.

Scale values were determined. The vertical intensity base line values from

preceding years are employed. Calculated quiet mean inclination value for 1947 was 77°32'2. Temperature coefficients for the H- and the V-variometers were 7.3γ and 1.3γ respectively.

Copy seen: DLC.

31009. NORSKE INSTITUTT FOR KOSMISK FYSIKK. The auroral ob-servatory at Tromsø: results of magnetic observations for the year 1948. Bergen, John Grieg, 1950. 31 p. tables, graphs. (*Its:* Publikasjoner, nr. 31) By Einar Tønsberg, and Steinar Berger.

The two series of tables feature hourly mean values at half hour Gr. M. T., and hourly values of storminess for each of the components: declination (D), hori-zontal (H), and vertical intensity (V). Smoothed values of the quiet diurnal variation and the diurnal sum of the total storminess of H are presented graphically. These scale values determined are pre-sented. The quiet mean inclination cal-culated was 77°32'2.

Copy seen: DGS.

31010. NORSKE INSTITUTT FOR KOSMISK FYSIKK. The auroral ob-servatory at Tromsø: results of mag-netic observations for the year 1949. Bergen, John Grieg, 1951. 31 p. tables, diagrs. (*Its:* Publikasjoner, nr. 32) By Einar Tønsberg, and Steinar Berger.

Tabulated and graphical presentation of observational results are given. The absolute measurements were taken by means of the newly acquired QHM (no. 123) and BMZ (no. 39) instruments. The QHM 123 was in accord with the base-line value 11208γ. Measurement by Aslund and Borg as of Aug. 8 and 9 with QHM 64 and QHM 129 gave 11209γ and 11208γ respectively. The discovered error (20γ too high) of the vertical in-tensity base-line value 50300 (now re-duced to 50280 for the year) is almost impossible to locate in time. The quiet mean inclination value calculated was 77°33'6.

Copy seen: DGS.

31011. NORSKE INSTITUTT FOR KOSMISK FYSIKK. The auroral ob-servatory at Tromsø: results of magnetic observations for the year 1950. Bergen, John Grieg, 1952. 31 p. tables, diagrs. (*Its:* Publikasjoner, nr. 33) By John A. Frøshaug.

Contains tabulated and graphical pres-entation of the observational results. Determinations of the base lines for H-

and V- curves as well as the scale values for H-, D- and V- curves utilized the QHM 123, QHM 164, BMZ 39 and BMZ 57 instruments in addition to those regularly used. The adapted scale values are given. The BMZ 57 observations showed 18γ higher than the BMZ 39 values used. The quiet mean inclination calculated was 77°33'5, temperature coefficient for the H- variometer is 7.3γ per °C. and -1.3γ per °C. for the V- variometer.

Copy seen: DGS.

31012. NORSKE INSTITUTT FOR KOSMISK FYSIKK. The auroral observatory at Tromsø; observations 1951. Bergen, John Grieg, 1953. 31 p. tables, diags. (*Its:* Publikasjoner, nr. 34) By Lars Vegard, L. Harang, J. A. Frøshaug, and E. Tønsberg.

Contains a brief report of activities of the observatory during 1951. The new large spectrograph ("V") in use measured satisfactory lines and bands from λ 3880 to infrared on Kodak 103aE and Kodak I-N plates. Also, the spectrograms facilitated accurate determinations of the ionospheric temperature as well as the study of hydrogen lines and their Doppler displacement. Detailed accounts of hourly values of h'f curves taken with an automatic radio echo recorder (since 1950) will be published regularly henceforth. The tabulated results of magnetic observations are given for Tromsø Observatory and for the station at Bjørnøya (74°05' N.). Results of ozone observations Aug. 1950-Oct. 1951 (Nov.-Dec. 1951 omitted because of assumed inaccuracy) are tabulated.

31014. NORWAY. NORSKE REGJERINGS INFORMASJONSKONTOR. Arctic war; Norway's role on the northern front. London, H. M. Stationery Office, 1945. 64 p. illus.

Contains a popular account of the work of the free Norwegian Army, Navy, and Air Force from the occupation of Norway in 1940 by the Germans until 1944. The training of British and American ski troops in Iceland by Norwegians and the arctic patrol activities of the Royal Norwegian Air Force based in Iceland are described. Jan Mayen was occupied by Norwegians in March 1941 and a weather station maintained throughout the war. Methods of supply and living quarters are discussed. In Aug. 1941, Norwegian and Russian civilians were evacuated from Spitsbergen, but Vest-spitsbergen was reoccupied by Norwegian and British troops in May 1942. Patrols were carried out and a weather station maintained despite German attacks. The Royal Norwegian Navy took part in attacks on German shipping in arctic waters and carried out patrol and convoy duty on the North Cape to Russia route. Norwegian troops re-entered northern Norway in Nov. 1944.

Contains a hydrological description of the Rivers Vychegda (right tributary to the Severnaya Dvina at 61°19'N. 46°55'E.) and the Pechora, and the Mezen' which flow northward through Arkhangel'sk Province into the Barents Sea, draining an extensive area mainly in timber and tundra. Utilization of these rivers in transportation is discussed, and distances tabulated. **Copy seen:** DLC.

31021. NOVAK, A. Dal'nevostochnyi nauchno-issledovatel'skii institut zemledeliia i zhivotnovodstva. (Kolkhoznoe proizvodstvo, Oct. 1952, no. 10, p. 56-58, illus.) **Title tr.:** The Far Eastern Scientific Research Institute for Agriculture and Animal Husbandry.

Outline of activities of the institute in 1950-1952: its tasks, methods of work, and achievements in the Far East, including (p. 58) Kamchatka Peninsula. **Copy seen:** DLC.

31022. NOVIKOV, G. A. Èkologiia ptits Khibinskikh gor, Kol'skii poluostrov. (Akademiia nauk SSSR. Zoologicheskii institut. Trudy, 1952. t. o, vyp. 4, p. 1133-54) **Title tr.:** Ecology of the birds of the Khibiny Mountains, Kola Peninsula.

Contains sections on the distribution of the local avifauna according to bio-

topes (alpine area, mountain slopes, valleys, etc.); ecology of the individual species (80 forms) with data on distribution, seasonal occurrence, biotopes, food, nesting, and reproduction, etc. Some data are given on food, including analyses of stomach contents, differences in species composition and ecology between the Khibiny area and the adjacent western regions. The study is based on material collected by the author and N. V. Provorov during the summer of 1931 as members of the Zoogeographical section (under V. I. Fridolin) of the Academy of Sciences' Kola Expedition, supplemented by observations of the author and others in the Khibiny during 1932-38, and of Fridolin and collaborators at the Kola Base. **Copy seen:** DLC.

31032. NOVOZHILOV, D. A. Griželečenie pri posledstviâkh otmorozheniĭ. (Voenno-sanitarnoe delo, 1938. [v. 10], no. 11, p. 36-39, table) **Title tr.:** Mud-treatment for the sequelae of frostbite.

Contains an account based on mud

treatment of 50 patients, with data on the degrees of injury and the nature of sequels and complications; methods of treatment; results. **Copy seen:** DLC.

31033. NOWICKI, ALBERT L. The Corps of Engineers. (*In:* Alaskan Science Conference, 3d. Alaska mapping programs and needs, a symposium. *Pub.* in Surveying and mapping, Apr.-June 1953. v. 13, no. 2, p. 200-203)

Contains a survey of the duties of the U. S. Army Corps of Engineers and its map plan for Alaska. Cooperation with other agencies such as the U. S. Geological Survey and the Coast and Geodetic Survey is discussed, and statistics are presented on the type, scale, and number of maps produced and areas covered.

Copy seen: DLC.

31034. NOWICKI, ALBERT L. U. S. mapping in the arctic and sub-arctic regions of the Western Hemisphere. (*In:* American Society of Photogrammetry. Panel on arctic mapping. *pub.* in Photogrammetric engineering, June 1953. v. 19, no. 3, p. 408-410)

Contains a discussion of the reasons for military mapping in the Arctic, with emphasis on Alaska. Map coverage after World War II was inadequate for military requirements which necessitated control of the northern extremities of the hemisphere. Military uses and needs determine the scales, contour intervals, and other information added to maps, such as names, forest coverage and other physical features, navigation aids, etc. When both military and civilian needs exist, cooperative mapping is done. New short-cut techniques are used to intensify mapping efforts, military units are sent to northern areas, and helicopters and light planes used for logistic support.

The paper, based on author's piscicultural investigation in Kola Peninsula in 1947-48, was delivered to the Conference on reproduction of fish resources, held in Leningrad in March 1950. The history of pisciculture in America and in Russia is reviewed briefly, and stated to have been based on the erroneous assumption that artificial hatching can replace natural fish breeding. The first task in protection of fish resources is protection of natural spawning and breeding; the supplementary artificial hatching must be based on detailed knowledge of the salmon's life history with attention paid not only to hatching but to rearing fry and parr to an advanced stage. The work of existing Kola hatcheries (in Taybol, in the Kola River basin) is criticized and further studies of salmon life are suggested.

31048. OBRUCHEV, SERGEĬ VLADIMIROVICH, 1891- . O nekotorykh terminakh, odnosiashechikhsia k Tunguskomu basseinu i Srednesibirskomu ploskogoriu. (Akademiia nauk SSSR. Izvestiia. Seria geol. 1952. no. 5, p. 128-31) **Title tr.:** On some terms concerning the Tunguska basin and Central Siberian plateau.

Deals with definition of certain geological and geographic terms used in the study of Central Siberia as: (1) Siberian platform (description and limits); (2) Tunguska series; (3) Permian carbon (obsolete and wrongly used term); (4) Tunguska coal region.

Copy seen: MH-Z.

31049. OBRUCHEV, SERGEĬ VLADIMIROVICH, 1891- . V nevedomykh gorakh Iakutii; otkrytie khebta Cherskogo. Moskva, Gosudarstvennoe izd-vo, 1928. 247 p. illus., maps (1 fold. col.) **Title tr.:** In the unknown mountains of Yakutia; the discovery of the Cherskiy Range.

Popular narrative of the author's expedition in 1926, sponsored by Geological Committee, to the upper basin of the Indigirka to investigate the alleged occurrence of platinum. The expedition left Yakutsk on June 15, crossed the Aldan and traveled to and along the Indigirka and its left tributaries, In'yali (approx. 66°15' N. 143° E.), Myuryulye and Chibagalakh (approx. 66° N. 143° E.) and returned via Oymyakon to Yakutsk on Dec. 24, without having located any workable deposits. The geographical, geological, hydrographic and meteorological notes are supplemented by scattered remarks on populated places, conditions of life of Russian inhabitants, Tungus and Yakuts, and on conditions of travel by horse, reindeer and boat. Oymyakon is described (p. 189-91): its site, inhabitants, dwellings, living conditions, climate and winter temperature which, being lower than in

Verkhoyansk, justifies claim of its being the true Cold Pole. From his own observations and fragmentary data of Cherskil and others, author claims discovery (p. 238-47) of a hitherto unknown range, extending in latitudinal direction in the upper basins of the Indigirka and Kolyma and crossing their course (64°-68° N. 140°-150° E.). It was named on author's suggestion, Cherskiy Range. Fold. col. map, compiled by astronomer of expedition, K. Salishev, 1:4,000,000, indicates the routes of expedition and situation of the range. Previously listed as *Arctic Bibliography* No. 12666.

31057. ODELL, LESTER DAHLBERG, 1911-, and G. T. ARAGON. Cold pressor test and kidney function. (American journal of obstetrics and gynecology, Nov. 1947. v. 54, no. 5, p. 867-71, 3 fig., table) 12 refs.

Contains a report on 14 pregnant and nonpregnant women, who had one hand immersed in ice water for 6.5 minutes; this usually caused a reduction in: urine collected, the urea clearance rate and the renal excretion rate. The change may be associated with an increase in urine protein excretion. Patients who did not respond to the cold stimulus tended to have a lower urine volume or urea clearance rate initially, and showed a less pronounced increase in blood pressure.

Copy seen: DLC.

31058. ODELL, LESTER DAHLBERG, 1911-, and others. Renal response to thermal stimulus. (American journal of obstetrics and gynecology, Nov. 1948. v. 56, no. 5, p. 835-45, 7 fig., tables) 20 refs. **Other authors:** G. T. Aragon, and R. C. Smutter.

Contains a report on 66 women all, except nine, pregnant, who had a hand or foot immersed in a cold bath (1° C.) for 15 minutes; this resulted in a decreased urine flow associated with an increase in its specific gravity and in some cases a change in protein excretion; variations in blood pressure took place but were not correlated, in degree of response, with the protein excretion; maternal pulse and respiratory rates tended to decrease but fetal heart rate did not vary significantly; an antidiuretic hormone is believed to be liberated by the posterior pituitary. The paper was presented before Chicago Gynecological Society. Discussion follows text.

31060. OETTEKING, BRUNO, 1871- . Ein Beitrag zur Kraniologie der Eskimo. (Dresden. Museum für Tierkunde und Völkerkunde. Abhandlungen und Berichte, 1908. Bd. 12, no. 3, p. 1-54, text tables, 12 graphs and curves, plate) about 120 refs. **Title tr.:** A contribution to the craniology of the Eskimos.

Contains results of an investigation of 14 Eskimo skulls preserved at the Museum of Dresden. Eleven skulls originated from the Ungava Bay district in Labrador (collected by B. A. Hantzsch in 1906), two were from North Greenland, and one, a prehistoric skull, was found in the Aleutian Islands. The skull capacity, indexes, angles and curves, also the form of face, nose and jaw are presented. The Eskimo skulls are compared with those of Kalmucks. The Eskimo skull, concludes the author, is a modified Mongolian; the specific Mongoloid traits are clearly and sometimes strongly evident, some primitive traits (especially those of the lower jaw) indicate a low degree of racial development. Several theories on the origin of Eskimos are discussed in the introduction.

31063. OGATA, K., and others. Influence of a large amount of sodium chloride ingestion on the basal metabolism and on resistance to cold and frost-bite. (Japanese journal of physiology, July 1952. v. 2, no. 4, p. 303-309, illus., table) 6 refs. *Other authors:* N. Nasu, K. Harada, and M. Kamota.

Daily intake of 50-60 g. of sodium chloride caused, after several days, a rise in basal metabolism, good appetite and energetic feeling; during this period the rise in oxygen consumption and drop of surface temperatures upon exposure to cold are less pronounced and the subjects complain less of cold. When increased salt intake is continued beyond this favorable stage, the known adverse symptoms caused by excessive salt intake become manifest. Problems of salt storage and elimination, and the effect of season are also discussed.

Contains descriptions of four subspecies (two are new) of the yellow ground squirrel (suslik or spermophile), *Citellus fulvus*, and nine subspecies (three described as new) of the long-tailed suslik, *C. (Urocitellus) eversmanni*, including *C. e. jaculensis* (Vilyuyisk, Yakutia), *C. e. buztoni* (Kolyma-Anadyr' region), *C. e. denjnegeri* (Kamchatka Peninsula) and *C. e. janensis* n. subsp. (Yana River region and Verkhoyansk Mts.). Summary in English. **Copy seen:** DLC; MH-Z.

31070. OGORODNIKOV, EVLAMPĬ KIRILLOVICH, 1816-1884. Murmanskiĭ i Terskiĭ berega po "Knigĕ bol'shogo chertezha". (Russkoe geograficheskoe obshchestvo. Otdelenie ĕtnografii. Zapiski, 1869, t. 2, p. 583-675, fold. map) **Title tr.:** The Murmansk and Tersk coast according to "The book of the big chart".

Murmanskiy bereg is the coast of Kola Peninsula from the western frontier to Mys Svyatoy Nos; Terskiy bereg, the coast from there to Kandalakshskiy Zaliv. "The book of the big chart" is the index to the Russian map (now lost) compiled in 1627 in the form of itineraries from Moscow to and in various parts of the Moscovite state. The historical background to the part of this book referring to the coasts of the Kola Peninsula is outlined here; names of rivers, lakes, islands and inhabited places are analyzed, compared with names on old foreign maps (e. g. the map of Jan Huyen) and in historical records, and identified with the 19th century names. Numerous notes are included on Lapps of the Kola Peninsula and in Lapland: exact living places in the 17th century and their changes (p. 608-611), etc. Appended (p. 666-75) is a geographic and ethnographic index and fold. map (at end of vol.). **Copy seen:** DLC.

31071. OGRYZKO, I. I. Otkrytie Kuril'skikh ostrovov. (Leningrad. Universitet. Uchenye zapiski, 1953, no. 157, Seriya fakul'teta narodov Severa, vyp. 2, *Ŗyzi i istoriia narodnostei Krainego Severa SSSR*, p. 167-207, fold. map) **Title tr.:** Discovery of the Kuril Islands.

Description and exoneration of the activities of a Russian traveler and

adventurer, the monk Ivan Petrovich Kozyrevskii (monastic name: Ignatii). Born in 1680, he headed an expedition in 1713 to Kuril Islands and began their systematic exploration and description. His voyages on the Sea of Otkhotsk, his travels in Kamchatka, and his trip on his little vessel the *Evers* to the mouth of Lena in 1728-29 (p. 195-96) are mentioned, as are the journeys of other explorers (Fedot Alekseev, Vladimir Atlasov). The map compiled by Kozyrevskii (reproduced here) includes the southern part of Kamchatka. Numerous sources including unpublished materials are cited in footnotes. **Copy seen:** DLC.

31072. OHLMARKS, ÅKE, 1911- . Arktischer Schamanismus und altnordischer seidr. (Archiv für Religionswissenschaft, 1939. Bd. 36, p. 171-80) **Title tr.:** Arctic shamanism and the Old Nordic seidr.

Contains author's theory that the real shamanism is to be found in the arctic region only, and is caused by the environment and "arctic hysteria". In the sub-arctic regions no real shamanism is possible; therefore, he rejects the work by D. Strömbäck (1935) who tried to interpret the old Norse seidr-divination as a form of shamanism. Ohlmarks gives also a critical consideration to theories on the origin of shamanism by a number of other authors. **Copy seen:** DLC.

31073. OHLMARKS, ÅKE, 1911- . Arktischer Schamanismus und altnordischer seidr. (In: Congrès International des Sciences Anthropologiques et Ethnologiques. 2d, Copenhagen, 1938. Compte rendu, 1939. p. 365-66) **Title tr.:** Arctic shamanism and the old Norse seidr.

Contains summary of the author's views on the problem of shamanism: it is a kind of nervous disease akin to "arctic hysteria", and typical or "inspired" shamanism is found only among the arctic peoples. The seidr among the ancient Norsemen was merely a kind of divination having nothing to do with genuine shamanism. **Copy seen:** DLC.

31074. OHLMARKS, ÅKE, 1911- . Studien zum Problem des Schamanismus. Lund, C. W. K. Gleerup, 1939. xvi, 395 p., 3 maps (270 refs.) **Title tr.:** Contribution to the problem of shamanism.

Contains a study on the origin and forms of shamanism based on the literature. The so-called "arctic hysteria" is

considered by the author as its original source, and its original homeland the arctic region. It has more or less degenerated among the sub-arctic peoples to merely "little-shamanizing", only partly ecstatic. The most important element in the ideology of genuine shamanism is the shaman's spirit-assistants; the male shaman is predominant among the arctic peoples, and the female more important further south. *Maps* show (1) climatic zones and food production in the Arctic; (2) shamanistic peoples of Eurasia (including Lapps, Samoyeds, Zyryans, Voguls, Ostyaks, Yeniseans, Ostyak-Samoyeds, Dolgans, Yukaghirs, Chukchis, Koryaks, Asiatic Eskimos, and the northerly-living Tungus and Yakuts); and (3) shamanistic peoples of North America. The area of arctic and sub-arctic forms is indicated on maps 2-3. Summary in English, p. 351-56.

31076. OKHOTIN, V. V., and G. P. MAZUROV. Pokrovnnye otlozheniia na morenakh Evropeiskoi chasti Sovetskogo Soюза. (Leningrad. Universitet. Vestnik, Apr. 1951. t. 6, no. 4, p. 46-57, tables) 18 refs. **Title tr.:** Cover deposits on moraines of the European part of the Soviet Union.

The geological and morphological features of these deposits are described, and their granulometric, physico-mechan-

ical, mineralogical and physico-chemical properties given in detail. They cover glacial moraines throughout the European part of the U.S.S.R. including its northern area (Bol'shezemel'skaya Tundra, Vorkuta district). Various hypotheses on their origin: fluvial-glacial, alluvial-diluvial, glacial (mud and dust of ice of former glaciers), or aeolian (dust brought by wind), are discussed and dismissed. Their genesis is explained, according to the author, by weathering of local rocks under the influence of alternate freezing and thawing, together with wind action, biological factors and solifluction processes, all of them active to the present time in northern areas.

31078. OKLADNIKOV, ALEKSEĬ PAVLOVICH. Arkheologicheskie issledovaniia 1940-1943 gg. v doline reki Leny i drevniia istoriia plemen. (Akademiia nauk SSSR. Institut istorii material'noi kul'tury. Kratkie soobshcheniia, 1946. vyp. 13, p. 99-107, 5 illus.) **Title tr.:** The archeological investigations of 1940-43 in the Lena River valley and the ancient history of the northern peoples.

Contains a summarized (and rather confused) description of four years' work of the Lena historico-archeological expedition in 1940-43; investigations were made for about 4000 km. along the Lena River. Numerous excavations were made and sites discovered belonging to the paleolithic, neolithic, bronze, and to different periods of the iron eras; prehistoric rock paintings (of elks and horses) and Turcic rune-like writings about 1000 years

old were found. In 1942-43 the lower Lena was explored from Yakutsk to the sea, excavations were made at 80 sites and many entirely new data collected for a fuller and deeper knowledge of the character of ancient culture in northern Yakutia, e. g. the writing-like pictures (ideograms) of Yukaghirs were discovered. Interesting excavations were made in 1942-43 on the River Bugachan and small lakes Uolba and Kylarsa near Zhigansk (67° N. 123° W.): burial places from the late neolithic and bronze ages were found and numerous artifacts unearthed. The most northerly paleolithic sites yet discovered in Siberia were those excavated at Nyuya and Dubrovino villages. The work of this expedition shows that the Yakuts are not recent immigrants in present-day Yakutia, but have dwelt on the banks of Lena for about 1000 years. *Copy seen: DLC.*

31079. OKLADNIKOV, ALEKSEĬ PAVLOVICH. Arkheologiya i osnovnye voprosy drevnei istorii Yakutii. V svyazi s itogami rabot Lenskoĭ arkheologicheskoi ekspeditsii Instituta Iazyka i kul'tury pri SNK IASSR i IIMK AN SSSR v 1940 g. (Akademiya nauk SSSR. Institut istorii material'noi kul'tury. Kratkie soobshcheniya, 1941. vyp. 9, p. 63-79, 3 fig.) *Title tr.:* Archeology and the principal questions of Yakutia's ancient history. In connection with results of the work of the Lena Archeological Expedition . . . in 1940.

Contains a review of archeological excavations in Yakutia, especially those made in 1940 in the Lena valley between Olekminsk and Yakutsk by the Lena Archeological Expedition, organized by the Institute of Language and Culture of the Yakut A.S.S.R. and the Institute of History of Material Culture at the Academy of Sciences of the U.S.S.R. The author was the leader of the expedition of which three other members are named. Two neolithic sites of a rather late date were excavated. Objects of stone and bone were found, also potsherds and bones of wild animals. The ceramics show close affinities with those found at Lake Baykal. On the other hand, cultural relations with the Amur region are also apparent. Tribes inhabiting the region from Olekminsk to Yakutsk, a few thousand years ago, lived the life of the Siberian forest hunters of the Baykal cultural type, and also practiced fishing and possibly agriculture (with cattle and

reindeer breeding) of the southern (Amurian) type. Together with the stone implements, objects of bronze were found, also stone forms for casting bronze artifacts. Drawings on rocks in the valley of the Lena and Olekma were investigated in which men, elks, a cave dwelling and a tent of birch bark are depicted (p. 77). The investigation of stone and bronze implements and the rock drawings as well, show that in prehistoric times Yakutia was inhabited also by Tungus, Yeniseians and some Paleo-Siberian groups. Among the Yakuts, bronze kettles of Seythian type have survived which had wide dissemination in the taiga about 1000 B. C.; they were used for religious performances and are also pictured on rock paintings. The Yakutian woman's ornaments and necklaces have preserved forms of the Seytho-Sarmatian type. *Copy seen: DLC.*

31080. OKLADNIKOV, ALEKSEĬ PAVLOVICH. Drevnie kul'tury severovostoka Azii po dannym arkheologicheskikh issledovaniĭ 1946 g. v Kolym'skom krae. (Akademiya nauk SSSR. Institut istorii. Vestnik drevnei istorii, 1947, no. 1, p. 176-82, 6 illus.) *Title tr.:* The old culture of northeastern Asia from data of the archeological investigations of 1946 in the Kolym'sk district.

Results of the Northeastern Expedition of the Institute of Ethnography and Institute of History of Material Culture in the Kolyma valley. The work was started in the south, at Magadan and four other places between approximately 58°-60° N., 150°-153° E.: on Zav'yalova or Ol'skiy Island, Mys Alevina, Koni Peninsula, and in Atargan near Ola. Semi-subterranean dwellings of the Koryak type and refuse mounds with sea mammal bones were excavated, and numerous bone and stone artifacts of the Amurian type found. The sites had been inhabited by the stone-age sea-hunters, and the region may be considered as a cultural route from Yakutia to Sakhalin, Kuril and Aleutian Islands, and also to the Chukotsk Peninsula. Thence the expedition moved to the lower Kolyma and explored three stone age sites on the Labuya River, at Pomazkino, Nizhniye Kresty, and Petushki. Obsidian knife-like flakes, scrapers, burins, and some potsherds were found. From further investigations on Mys Baranov, finds of harpoon heads of Birnirk and Thule types, bone carvings of polar bear and

seals, etc. are described and illustrated. Classified as belonging to the Eskimo culture, they are typical of the "first Bering Sea style", similar to objects previously found on the Chukotsk Peninsula near Bering Strait, and in Alaska.

Copy seen: DLC.

31081. OKLADNIKOV, ALEKSEĬ PAVLOVICH. Drevnie kul'turnye svyazi mezhdu arkticheskimi plemenami Azii i Evropy; po materialam pamiatnikov bronzovogo veka. (Leningrad. Universitet. Uchenye zapiski, 1953. no. 157, Seriya fakul'teta narodov Severa, vyp. 2, *Yazyk i istoriia narodnostei Krajnego Severa SSSR*, p. 151-66) 20 refs. *Title tr.:* The ancient cultural relations between the arctic tribes of Asia and Europe; based on relics of the bronze age.

Contains evaluation of the latest archeological investigations in the North. The bronze age burial places discovered by A. B. Schmidt on Oleniy Ostrov in Kola Inlet, and the early iron age sites on Kjelmo Island in Varanger Fjord, are compared with finds made at Pokrovsk on the middle Lena. The forms of burial and objects found in these two places far distant from each other, are compared and many affinities stated. The northern Scandinavian rock engravings and rock paintings are compared with those found in Yakutia, in the Siberian forests and near the Ural Mts. The wide dissemination of arrow-like stone axes is traced. Lapp skulls, art and folklore are compared with those of northern Yakutia. The Lapps, concludes the author, have had some very old connections with the ancient tribes and the arctic and subarctic cultures of northern Asia. It is obvious to him that a process of resettlement from the East to the West was in progress for many thousands of years; also that an exchange of cultural goods between the arctic and subarctic tribes of Asia and the more southern regions of woodland, taiga, and tundra can be traced.

31082. OKLADNIKOV, ALEKSEĬ PAVLOVICH. Drevnie poseleniia v doline r. Khatangi. (Akademiia nauk SSSR. Institut istorii material'noi kul'tury. Kratkie soobshcheniia, 1947. vyp. 18, p. 38-45, 2 fig.) *Title tr.:* The ancient settlements in the Khatanga River valley.

Contains description of archeological excavations made in 1945 in the village of Khatanga and vicinity (about 72° N.

103° E.), the most northerly neolithic sites yet discovered in the U.S.S.R. The objects found (stone scrapers, arrow heads and knives, potsherds with basket-weave ornament) show great similarity to neolithic artifacts from Yakutia (on the middle and lower Lena), especially to the ceramics excavated in 1945 on the River Kullaty (40 km. above Yakutsk). The larger stone tools and pots were certainly not fabricated in the Khatanga region but brought from the south. The use of quartzite (along with chalcedony) for stone tools, well-preserved bones and the presence of some copper plaques indicate that the ancient inhabitants of the Khatanga lived in the latest stage of the neolithic era, or rather at the beginning of the early iron age. *Copy seen:* DLC.

31083. OKLADNIKOV, ALEKSEĬ PAVLOVICH. Kamennye orudiia s ostrova Faddeia; "arkticheskiĭ paleolit" u beregov Taymyra. (Akademiia nauk SSSR. Institut istorii material'noi kul'tury. Kratkie soobshcheniia, 1951. vyp. 39, p. 76-80, 2 illus., sketch map) *Title tr.:* Stone implements from the Faddeya Islands; the "arctic paleolithic" on the Taymyr coast.

Contains description of four stone artifacts, shaped by human hand, found on the northern Faddeya Island in 1945. A piece of mammoth tooth was also found. Similar stone artifacts, attributed to the "arctic paleolithic", have been found in the far North of Norwegian Lapland. It appears, the author concludes, that in the postglacial period the climate in these northern regions was much warmer, and that the tundra hunters nomadized freely between Lapland and the Taymyr Peninsula.

Contains summary statement of the work of the Kolyma expedition of 1945. (1) Itinerary: after excavation of a neolithic settlement on the River Kullaty near Yakutsk, the party flew via Belyakh to Magadan; in the vicinity of Magadan (on Ol'sk Island, Cape Alevina and Cape Atargane), ancient Koryak settlements were investigated. From Magadan the party went to Srednikan

and thence to the mouth of the Kolyma River. From the port Ambarchik trips were made to Cape Bol'shoy Baranov (69°47' N. 164°24' E.) and to the River Medvezh'ya, 7 km. from Ambarchik. (2) On the Kullaty River, two types of earth houses were excavated: cave dwellings and storage pits; also a burial place from the early bronze age in which human bones and other objects were found. (3) Investigations of ancient settlements in the Magadan region reveal old Koryak cultural remains of different periods which throw light on the growth of this culture through the ages. (4) The neolithic sites and workplaces excavated in the Kolyma valley indicate that the colonizers of this region came from the south, viz. the lower Lena. (5) Investigations of old seashore settlements in the region of Cape Baranov show that there had developed in the last two thousand years, a peculiar variant (in three stages) of the old Eskimo sea-hunting culture: (a) simultaneous Old Bering Sea culture, (b) the Birnirk-Thule culture, and (c) the "Shelagi" culture of the 17th-18th centuries. *Copy seen: DLC.*

31085. OKLADNIKOV ALEKSEY PAVLOVICH. Lenskie drevnosti, vyp. 3. Otechet ob arkhologicheskikh issledovaniyakh v rafone s. Pokrovskogo i g. Ākutska v 1940-1946 gg. Moskva-Leningrad, 1950. 195 p. 36 illus., 3 tables, 41 plates. (Akademiã nauk SSSR. Institut istorii material'noi kul'tury. Institut űazyka, literatury, istorii i iskusstv Ākutskogo filiala AN SSSR. Materialy po drevnei istorii Ākutii) *Title tr.:* The Lena antiquities, part 3. Report on archeological investigations in the region of Pokrovskoye village and the city of Yakutsk in 1940-1946.

Contains report on the discovery and investigation of several neolithic sites in the central part of the Yakut A.S.S.R., made in 1940-46 under leadership of the author. Numerous artifacts of bone and stone, and ornamented potsherds were found. The most interesting neolithic settlement was found at the mouth of the Kullaty River, 35 km. south of Yakutsk, where a burial place of the early bronze age was also discovered. The site was systematically explored, the finds are described and archeologically evaluated (p. 21-84, plates 3-38). Four cultural layers were excavated: from 0 to 15 cm., 15 to 35-cm., 35 to 75 cm., and 75 to 150 cm. Objects belonging to the stone

and bronze ages, including pottery, were found in the first two layers (from the surface); the early iron age is obvious in the second layer; the third layer shows already a fully developed neolithic; the fourth layer contains nothing but animal bones. These finds show that the region of Yakutsk was inhabited in the period of the Siberian neolithic, about 4,000 B. C. Burins, lammelar flakes and cores, scrapers, side and end blades, found in the first and second cultural layers of the Kullaty site, resemble those found at the earliest Alaskan sites. The bronze age burial place at Kullaty is similar to that found on the Bugachan River near Zhigansk (dated about 1,700-1,300 B. C.).

Appendix contains four reports on other materials collected, each of which appears in this Bibliography under its author's name (title tr.):

GRIGOR'EV, N. F. Geological sketch of the Kullaty site. p. 163-77.

GARUTT, V. E. Fauna of the neolithic site of Kullaty. p. 176-85.

GUREEV, A. A. Birds from the neolithic site of Kullaty. p. 186-88.

ĀKIMOV, V. P. Skull of a bronze age man in Yakutia. p. 189-98.

Part 1 of this work is No. 24814; pt. 2, pub. Yakutsk 1946, has not been located yet. *Copy seen: DLC.*

31086. OKLADNIKOV, ALEKSEY PAVLOVICH. Neoliticheskie pamãtniki kak istochniki po ètnogonii Sibiri i Dal'nego Vostoka. (Akademiã nauk SSSR. Institut istorii material'noi kul'tury. Kratkie soobshcheniã, 1941, vyp. 9, p. 5-14, map) *Title tr.:* Neolithic monuments as sources for ethnic origins in Siberia and the Far East.

Contains a review of archeological and anthropological work on the origin of the northern Siberian peoples: Eskimos Paleo-Siberians, Ugrians, and Tungus. Theories of Castrén, Schrenk, Ogorodnikov, Debets and others are considered, and the new archeological material is evaluated. Nine different neolithic cultures of Siberia are shown on a map (p. 7): those of Baykal, Amur, southern Kamchatka, northern Kamchatka, eastern Arctic, western Arctic, Ob', Kama, and the culture of hole-comb ceramics. According to Ogorodnikov, the northern part of Europe and Asia, at the end of the glaciation, was inhabited by a long-headed race of hunters and fishers who stayed there to the very end of the neolithic period. In a quite early period,

however, another, brachycephalic race invaded from Inner Asia. The invaders in possession of a higher culture, were familiar with farming (used the plow) and cattle breeding; they used metals (copper, bronze and gold) and understood how to get them. The new race partly annihilated and partly assimilated the long-headed race of inferior culture and thus the hunting and fishing culture of the stone age was brought to an end. The author gives much attention to the Tungus, their clothing and ornaments, their breastplates especially are investigated, and conclusions drawn, from excavated graves, on their religious beliefs. The problem is raised: who were these people of brachycephalic race who replaced the northern stone age people: the Tungus, or bearers of the so-called "afanas'evskaya" culture?

31087. OKLADNIKOV, ALEKSEĬ PAVLOVICH. O pervonachal'nom zaselenii chelovekom vnutrennei chasti Chukotskogo poluostrova. (Vsesoiuznoe geograficheskoe obschestvo. Izvestiia, 1953. t. 85, vyp. 4, p. 405-412, illus., text map) 17 refs. *Title tr.:* On the original settlement by man in the interior of the Chukotsk Peninsula.

Contains an account of the recent stone age finds in central Chukotka, and their evaluation. Some paleolithic artifacts discovered by the geologist N. N. Levoshin on the Yakitikiveem River (a small left tributary of the Amguema) in 1947, were the first. They belong to a continental pre-Eskimo culture of nomads living by caribou-hunting and fishing, who made knife-like prism-shaped flakes and stone arrow points sharpened on both sides. Man-made piles of wild reindeer bones together with some darkened potsherds, two obsidian burins, a typical scraper, etc., were found in 1952 by N. A. Grave, also a geologist, on the shores of Lake Chirovoye near the source of the Belaya River (? incorrectly marked on sketch map). These objects are typical of neolithic and early bronze age culture in Yakutia and the Kolyma region. The artifacts and potsherds from Chirovoye are described with illus. and dated about 1500 B. C. The difference of the Chirovoye ceramics from the well-known Eskimo vessels, and affinities with those from subarctic Yakutia and the Kolyma region are stressed. The stone artifacts from Yakitikiveem are older and of different

material than those of Chirovoye, and ceramics are lacking. Thus the middle of the Chukotsk Peninsula was inhabited by a continental people from the south, maybe Yukaghirs or Chukchis. The stone age culture from the Chukotsk interior shows affinities with "microlithic" finds in continental Alaska, and indicates relations between the two continents in the pre-Eskimo period.

31088. OKLADNIKOV, ALEKSEĬ PAVLOVICH. Ocherki po istorii Äkutii ot paleolita do prisoeдинeniia k Russkomu gosudarstvu. (Akademiia nauk SSSR. Institut istorii material'noi kul'tury. Kratkie soobshcheniia, 1949. vyp. 29, p. 116-18, fold. plate) *Title tr.:* Sketches of Yakutia's history from the paleolithic until incorporation into the Russian state.

Summary of Ph.D. thesis, based on literature and on the author's numerous archeological field trips between 1924 and 1946, in the Lena valley, also Kolyma, Khatanga, Angara, and Selenga River regions. The prehistory of Yakutia is divided into seven periods: the early and late paleolithic, neolithic, early and developed bronze, early iron and the old Yakut culture. Each period is characterized by its typical cultural manifestations (see plate), and a dating is attempted for several of the periods. The coming of the Yakuts from the south in the 15th-16th centuries, their origin, migration, acclimatization in the new country, was and epics are treated.

31089. OKLADNIKOV, ALEKSEĬ PAVLOVICH. Osnovnye vekhi drevnei istorii Äkutii. (Leningrad. Universitet. Vestnik, 1949. god 4, no. 7, p. 76-92, 8 illus.) *Title tr.:* Basic ages of the ancient history of Yakutia.

Contains a sketch of life in prehistoric Yakutia. The movement of the Yakuts northward from the Pribaykal'ye region as far as Zhigansk and beyond, their material culture, based on recent archeological excavations on the Lena and Kullaty Rivers and other places are reviewed. The paleolithic and neolithic tools and implements, rock paintings, weapons of bronze and iron, and the old forms of dwellings are investigated. The heroic deeds of the Yakut leader Tygyn, his struggle with Russians, and his death (around 1640) are described according to folk traditions.

31090. OKLADNIKOV, ALEKSEĬ PAVLOVICH. Proiskhozhdenie iakutskoi narodnosti. (In: Vsesoiuznyi geograficheskii s'ezd. 2nd, Leningrad, 1947. Trudy, 1949, t. 3, p. 365-71) **Title tr.:** The origin of the Yakut nation.

Contains discussion on the southern origin of the Yakut people, based on names for certain animals, plants, landscape features, tents, etc., which testify that formerly the Yakuts were familiar with the steppe and with natural life similar to that of Kazakhstan and Kirgizia. On the other hand, several words for northern phenomena (e. g. reindeer moss, cedar bushes, peat, etc.) were borrowed from the Tungus, because Yakut words were non-existent. Pictorial art, rune-like inscriptions and folklore of the Yakuts is investigated also to show traits of southern origin, as do their legends in recounting how the Yakuts fled from Kachuga to the lower Lena.

Copy seen: DLC.

31091. OKLADNIKOV, ALEKSEĬ PAVLOVICH. Raskopki na Severe. (In: Po sledam drevnikh kul'tur. Moskva, 1951. p. 13-45, 10 illus., col. plate) 10 refs. **Title tr.:** Excavations in the North.

Contains popular account of archaeological investigations made in northern Eurasia, especially Yakutia, in recent years. The superiority of Soviet research to that of the "capitalist West" is stressed. The culture of arctic peoples, according to the author, has had the same stages of evolutionary development (from paleolithic to neolithic, then to bronze and iron ages) as that of peoples elsewhere; it was not "petrified" at the stage of bone and stone culture as "capitalist" scholars supposedly want to prove. Evidence of a bronze age in the Arctic is claimed in an ancient site on the lower Lena near Siktyakh viz., a 3,000-year-old smithy found in the permafrost, which shows that copper and bronze were melted there and clay molds used for casting metal artifacts. The discovery, in 1936, of a paleolithic site at Mal'ta and Buret' near Irkutsk disclosed a culture very similar to that of present-day Asiatic Eskimos and Chukchis. From other sites cited, the author concludes that about 2,000-3,000 B. C., a neolithic people, descendants of the most ancient inhabitants of Yakutia, pushed further north reaching the Arctic Ocean and the Kolyma River. The bone engravings of

the Bering Sea culture are discussed and rock paintings at the Shishkino River on the Lena, investigated by the author in 1941, are described. In the neolithic period, the European North was greatly influenced from the east, but the reverse was not true. The introduction on Russian pioneer work, and the last chapter on the contribution of the northern peoples to the world's culture are laudatory in style and interspersed with numerous quotations from works of I. V. Stalin and other Marxian authorities.

31092. OKLADNIKOV, ALEKSEĬ PAVLOVICH. Unikal'noe kamennoe teslo s reki Kolymy. (Akademiia nauk SSSR. Institut istorii material'noi kul'tury. Kratkie soobshcheniia, 1947. vyp. 15, p. 137-38, 2 illus.) **Title tr.:** A unique stone adze from the Kolyma River.

Contains detailed description of a neolithic find, a large polished adze (22 cm. long and 5.7 cm. wide), made from heavy black crystal rock and roughly representing head contours of an elk. The object was found in 1940 on the bank of the Kolyma River at Nizhne Kolymsk and now is preserved at the Yakutian Museum. Description is given of the technique by which the tool was probably made and parallels indicated of bear- or elk-head shaped axes, hammers and pestles from western Siberia, the Baltic region, northern Russia and other areas. The Kolyma adze remains closer to east European types; similar objects not having been found as yet in northeastern Siberia.

31095. OLIVER, VINCENT J. Ice fog in interior Alaska. (*In:* Alaskan Science Conference, 1950. Proceedings, pub. 1951, p. 76)

"Ice fog in interior Alaska forms in and around urban centers, elsewhere unrestricted visibility prevails. It is infrequent with temperatures warmer than -30°F ; with colder temperature its frequency increases, reaching nearly 100 percent (in towns) at temperatures colder than -50°F ."—*Meteorological abstracts and bibliography*, July 1953. v. 4, no. 7, p. 804. **Copy seen:** DWB.

31096. OLIVIER, GEORGES. Notes du Spitzberg. (Oiseau et la revue française d'ornithologie, 1933. Nouv. sér., v. 3, no. 1, p. 59-68, illus., 3 plates) **Title tr.:** Notes on Spitsbergen.

Contains a list of 20 birds observed by the author during his one-week stay on the northeastern coast of Vestsptsbergen ($79^{\circ}59'\text{N}$.) in August, 1932 (?), with notes on abundance, habitat and mode of life. **Copy seen:** MH-Z.

31097. OLSON, RICHARD. Arctic summer. (Americas, Apr. 1951. v. 3, no. 4, p. 16-20, 56 illus.)

Contains a popular sketch of the Alaskan tundra, dealing with climate and plant life, animals (lemming, caribou, wolf) some birds, mosquitoes. The Brooks Mts. and the Colville River, preglacial climate and life of the tundra, the Eskimos, especially those of the Anak-

tuvuk Pass in the Brooks Mts., their dwellings, life, etc., are sketched.

Copy seen: DLC.

31098. OLSON, RONALD LEROY, 1895- . Adze, canoe, and house types of the Northwest Coast. (Washington. University. Publications in anthropology, Nov. 1927. v. 2, no. 1, p. 1-38, illus., 3 maps on plates) 100 refs.

Contains an essay on three typical traits of material culture, tracing areas of their distribution in a restricted region between the Straits of Juan de Fuca and southern Alaska, with an attempt to show the process of diffusion. The northern canoe, the elbow adze and the northern types of gabled house tend to disappear outside the culture center formed by Tlingit, Tsimshian, Haida, and perhaps Kwakiutl. The problem of the cultural relations with Asia is taken into consideration. The basic features of the three traits are probably not developments within the Northwest Coast area.

Copy seen: DLC.

31099. OLSON, RONALD LEROY, 1895- . The Indians of the Northwest Coast. (Natural history, 1935. v. 35, no. 3, p. 183-97, illus., sketch map)

Contains description of the landscape and climate of the region northward from Puget Sound to Yakutat Bay, followed by an account of the salient features of the culture of the coastal Indians: Kwakiutls, Haidas, Tsimshians and others. The food supply, the frame houses, their structural features, and interior; wood carving (totem poles), box and basket making; the social (and lack of political) organization is noted; the caste system, maternal clans, blood revenge; the potlatch, concept of wealth and prestige are discussed. Richly illustrated with photographs.

Copy seen: DLC.

31100. OLSON, RONALD LEROY, 1895- . Some trading customs of the Chilkat Tlingit. (*In:* Essays in anthropology presented to A. L. Kroeber, 1936. p. 211-14)

Contains description of the trading which was regularly carried on between the Tlingits of the Chilkat villages and the tribes of Athapascans who occupied the territory across the coastal range in northwesternmost British Columbia and southern Yukon Territory (data gathered during the summers of 1933 and 1934). The Tlingits were culturally superior to

the Athapaskans, had better knowledge of the value of goods and exploited the latter, who traded furs for firearms, powder, shot, dress goods, blankets, iron tools, tobacco, etc. Each leader in the Tlingit party had a "trading partner" of the same clan or moiety among the Athapaskans, and they met once a year in winter. The Tlingits stayed for several days in the partner's house, enjoyed friendly treatment, including sex hospitality. The trading was accompanied by songs, dances and other amusements as blanket-tossing, broad-jump contests, etc., the Athapaskans teaching the guests their songs and dances. Tlingit men often married women of the interior tribes for the purpose of securing greater trade advantages; such women remained with their kinsmen, saw their husbands once or twice a year, and Tlingits usually had a wife and family in their home villages.

31101. OLSSON, AXEL. Undersökning över vältningens inverkan på marktemperatur och på lufttemperaturen närmast markytan. (Lantbruksakademien, Stockholm. Tidskrift, 1953. Årg. 92, nr. 2-3, p. 220-41, 9 graphs, 7 tables) 21 refs. *Title tr.:* Investigations of the influence of rolling on soil temperature and air temperature near the surface.

"Peat and humus soils were rolled with a 250-kg. Cambridge roller and a 1,000-kg. concrete roller to determine whether compaction increased heat conductivity. Meteorological observations included cloudiness, wind velocity and precipitation. Soil temperature at a depth of 10 cm. and air temperature at 0.05 and 1.5 m. above the ground were measured several times daily. The tabulated results of experiments in 1930, 1940, 1942 and 1943 verify the theory of increased conductivity. A minimum temperature of -12° C. at 5 cm. above unrolled ground and -10° C. above rolled test strips was recorded during an extremely cold period in 1951. Two rollings increased the effect by about 0.5° C. immediately above the ground. The temperature difference above rolled and unrolled soil was greater on calm, sunny days. The results indicate that rolling protects tender seedlings from frost damages."—SIPRE. Summary in English.

31106. O'NEILL, WILLIAM A. The development and research necessary for a continuing mining industry in the Territory. (*In:* Alaskan Science Conference . . . 1951. Proceedings, pub. 1953, p. 166-70)

The history of the Alaskan mining industry from 1867 to 1950 is briefly reviewed. Since World War II, transportation problems, increasing operating costs and discontinuance of the government buying program has forced many operations to cease production. Research by federal and territorial agencies has been, and is, of great importance in developing mineral resources; but government encouragement of venture capital and small operators through lowering of taxes and a purchasing program is necessary to revive the industry.

31111. ONTI, TAKEYUKI. Influence upon the blood sugar of application of cold to the cat's body. (Tohoku journal of experimental medicine [Sendai, Japan], May 15, 1941. v. 40, p. 78-85)

Contains a report on experiments with cats which had ice water introduced through a stomach fistula, so as to produce a heat debt of 2.1-3.6 thousand large calories per kilo of body weight. There followed a transitory fall of body temperature of 1°-2° C. Blood sugar content increased in male animals only, and was apparently due to emotional factors.

Copy seen: DLC.

31124. ORVIG, SVENN. Floating ice islands in the Arctic Ocean. (Geographical review, Apr. 1953. v. 43, no. 2, p. 277-79)

Contains a summary of current information, citing papers published in the journal *Arctic* in 1952: the discovery of ice islands, in 1946, in the course of the weather reconnaissance flights over the area between Alaska and the North Pole; possible references to similar formations in other areas by early explorers; the character and present investigation of these islands. Ice islands differ from sea ice in their great area and thickness, and may originate as shelf ice on the north coast of Ellesmere. Research by a party wintering on ice island T3 in 1952-53 is expected to provide information on its age, structure, and movement. Islands T1, T2, and T3 have been found to move about 1.2 miles a day on a "circular track from northern Ellesmere Island along the edge of the Canadian archipelago to about 75° N., thence west to 175° W., and north across the region of the North Pole." The long range study of ice in northern Canadian waters begun in 1948, has added 31 new ice islands to the 28 already known, the largest is about seven

by six miles in size. Some may prove useful as landing fields for aircraft.

31125. ORVIG, SVENN. The glaciological studies of the Baffin Island Expedition, 1950, Part V. On the variation of the shear stress on the bed of an ice cap. (Journal of glaciology, Nov. 1953. v. 2, no. 14, p. 242-48, 2 illus., map, 6 diagrs., 4 tables) 8 refs.

"Nye's formula for shear stress on a glacier bed was applied to the southern lobe of the Barnes Ice Cap. Data from four of the traverses, obtained in 1950, were used to calculate the variation of the shear stress on the bed. An ice density of 0.91 gm./cu. cm. was used in the calculations. Some of the values obtained are exceptionally low, possibly due to the fact that the lines of travel over the surface do not necessarily correspond to the lines of greatest slope or lines of flow. The values are relatively high in only one direction, and it is concluded that there is a considerably greater movement of the ice toward the northeast side of the southern lobe."—SIPRE. Appended (p. 247-48) are comments by W. H. Ward suggesting that the lowering of water level in lobes impounded on the northeast side has removed a stabilizing force, causing increase of ice flow toward the lakes. For pt. 1-3 of these studies, see *Arctic Bibliography*, No. 20451, 27260-27261.

31126. ORVIN, ANDERS KRISTIAN, 1889- . Litt om navnsetting på Svalbardkartene. (Norsk geografisk tidsskrift, Apr. 1953. Bd. 14, hefte 1-4, p. 205-209) **Title tr.:** Concerning nomenclature of the Svalbard maps.

Contains summary account the preparation of *The place-names of Svalbard*, Oslo, 1942, (*Arctic Bibliography*, No. 12,566) by a committee during 1925-28, then by Adolf Hoel and staff. Some 360 old maps, 500 books were checked; about 10,000 names (before 1935) collected, of which 3,300 were finally adopted, 6,500 discarded and 450 not identified. Orthographic problems are noted. Names as-

signed since 1935 are recorded, and if approved, established, with longitude and latitude, and other pertinent information. Norsk Polarinstitutt checks names on local maps before printing. The Norwegian nomenclature is being adopted for Svalbard maps by British explorers and (in part) by the Hydrographic Office. A forthcoming supplement (the first) to *The place-names of Svalbard* is noted.

31127. OSBORN, JOHN J. Experimental hypothermia; respiratory and blood pH changes in relation to cardiac function. (*American journal of physiology*, Dec. 1953. v. 175, no. 3, p. 389-98, illus., tables) 20 refs.

Contains a study of arterial pH and some elements of respiratory exchange in anesthetized, heparinized dogs made hypothermic. An initial rise in arterial pH was followed (when the body temperature dropped below $\pm 29^{\circ}$ C.) by a prolonged and persistent fall in pH, apparently caused by CO_2 retention. The major changes in pH were associated with high mortality. Induction of respiratory acidosis prior to chilling appeared on the other hand to have a protective effect.

31134. OSWALT, WENDELL H. Recent pottery from the Bering Strait region. (Alaska. University. Anthropological papers, 1953. v. 2, no. 1, p. 5-16, 2 text illus., 2 plates) 18 refs.

The study embodies approximately 7,000 sherds and is intended to define the recent Eskimo pottery styles for the general area; also to delineate the post-Punuk ceramic sequence on St. Lawrence Island. The ware under consideration is divided into two categories, the pottery from St. Lawrence Island and that from Seward Peninsula. The former are collections assembled by O. Geist, 1934-35 (see *Arctic Bibliography*, No. 5603), and by the author in 1948. The latter is comprised of 121 sherds collected by several scientists from eight sites. The ware is classified and described, and terms are given for its different forms and designs. Comparisons are made between the pottery of St. Lawrence Island and that of the Chukotsk Peninsula. Conclusions: "Most of the few recent decorated St. Lawrence Island sherds are of the same general nature as those found on the Alaskan mainland and probably represent a small backwash from Alaska upon a basically Siberian pottery tradition, whereas recent Seward Peninsula pottery is an Alaskan development containing elements best known from Bristol Bay—Norton Sound region and northern Alaska. The typological parallels between Asian and Alaskan wares and even between wares from Asia and the United States are constantly coming to light and deserve serious consideration in any study of Alaskan ceramics" (p. 14).

Contains data on the geological history and structure of northeastern Yakutia, including three intrusive tin-bearing zones: Tas-khayakhtakh, Yana (the richest in tin), and Verkhoyansk; with notes on the petrology and mineralization.

Copy seen: DLC; MH-Z.

31147. PADDOCK, FRANKLIN K. Chronic disability in mild cases of trench foot. (New England journal of medicine, Mar. 28, 1946. v. 234, no. 13, p. 433-37) 8 refs.

Contains an investigation of late manifestations in trench foot of the mild type. The disabilities were of two kinds, vascular and neural. In the former, increased arteriolar tone, apparently secondary to sympathetic stimulation, but no evidence of arteriolar obstruction, were found. Nervous disturbances amounted to superficial hypalgesia and diminution of temperature, vibration, and position-sense. The disability of

the later stages appears to depend more on neural than on vascular disorder.

31149. PAGÉ, EDOUARD, AND L.-M. BABINEAU. The effects of diet and cold on body composition and fat distribution in the white rat. (Canadian journal of medical sciences, Feb. 1953. v. 31, no. 1, p. 22-40, illus., tables) 11 refs.

Fat distribution in the rat's body was found not to be affected by environmental temperature nor by the fat content of the diet. Livers were smaller with a high fat diet both at room temperatures and in the cold. Both livers and kidneys were larger in cold environment. Average values of body water (expressed as percentages of the lean body mass) were the same irrespective of the environmental temperatures. **Copy seen:** DSG.

31150. PAGE, JOHN, and M. BROWN. Effect of heating and cooling the legs on hand and forearm blood flow in the Eskimo. (Journal of applied physiology, June 1953. v. 5, no. 12, p. 753-58, illus.) 11 refs.

Contains a study of blood flow in hand and forearm, and rectal temperatures of Eskimos on Southampton Island, and a control group of white students. During heating of the legs, the hand blood flow was equal in both groups while the muscle temperature and blood flow in the forearm were greater in the control group. During cooling of the legs, the Eskimos showed little change in blood flow of the hand and forearm, against a pronounced fall in the control group.

31151. PALACIOS MATEOS, J. M. Hipervitaminosis A. (Revista clínica española, Aug. 31, 1951. v. 42, no. 4, p. 269-71, table) 11 refs. **Title tr.:** Hypervitaminosis A.

Contains an account of the discovery and subsequent study of hypervitaminosis A; symptoms and pathology; acute poisoning; chronic poisoning and circumstances of its occurrence in children; its pathology and diagnosis; probable mechanism of the pathological action of the vitamin; treatment. **Copy seen:** DSG.

31152. PALEŤ, A. "Polnochnykh stran krása i divo". (Znanie-sila, May 1951. t. 21, no. 5, p. 6-9, illus.) **Title tr.:** "The jewel and marvel of midnight countries".

Sketch of the world's northernmost large city Murmansk, which, founded in 1915, grew from 2500 inhabitants in 1920 to over 100,000 in 1940. The turbulent activities of the city, its nature and climate, importance as a center of fishing industry, and significance as "Gateway to the Arctic" are noted, as well as the men, S. M. Kirov, A. I. Mikoŭan and N. M. Knipovich and others, who contributed to its development. The title is a quotation of Pushkin's words referring to Petrograd, which today may be applied to a new northernmost city.

Copy seen: DLC.

31153. PALEŤ, A. Zagadka murmanskoi sel'di. (Znanie-sila, July 1950. t. 20, no. 7, p. 23-24, 30, illus.) **Title tr.:** The riddle of the Murmansk herring.

The Murmansk herring was formerly known simply as a certain small, short-lived (five-six year) species, till investigations of the Polar Institute of Fisheries and Oceanography, with the research vessel *Persel*, identified it with the Scandinavian herring. Its spawning ground was located (northwestern Scandinavia), also an area (unidentified) to which it migrates in large numbers and is easily caught. The scientists responsible for the latter discovery were awarded the Stalin prize.

"Summarizes known data and problems relating to the geologic history, structure, and relief of the continental shelf and the basins of the polar seas of the U.S.S.R. In general, the structure is characterized by vertical dislocations and forms due to differential crustal movements." Bot-

tom sediments have been more investigated in the Barents than other seas owing chiefly to the work of M. V. Klenova.—From Geological Society of America. *Bibliography and index of geology.* **Copy seen:** DLC.

31171. PANOV, D. G. Sovremennyye problemy geomorfologii Arktiki. (*In:* Vsesoiuznyi geograficheskii s"ezd. 2d, Leningrad, 1947. Trudy, 1948, t. 2, p. 341-58, 2 fold. maps.) 11 refs. **Title tr.:** Modern problems of geomorphology of the Arctic.

Need for a synthesis of results from geomorphologic investigations in separate parts of the Arctic is discussed, and consideration given to a systematic division of the whole area into zones according to their geomorphological structure, taking into account the paleogeographic conditions, the development during the Quaternary period and the effects of the recent processes. **Copy seen:** DLC.

31172. PANSAR, TEKNIK, UNDERHÅLL. Det sovjetryska infanteriets pulkor. (Pansar, teknik, underhåll; militärteknisk tidskrift, 1945. v. 14, no. 3, p. 15-18, illus.) **Title tr.:** The pulks of the Soviet Russian infantry.

"The three types of pulks (sledges) used by Soviet Russian ski troops are described. Type 1 has a flat bottom and carries a light machine gun and three boxes of munition. Spare parts, tools, and equipment are kept in two rooms provided with doors, one on each side of the shaft of the gun. The doors, swung open, support the elbows of the gunner in action. The sledge, pulled by two men, accommodates six-eight munition boxes or five boxes of mortar shells when used for transport only. Types 2 and 3 are boat-shaped, and are pulled by three and two men respectively. Type no. 2 carries either a mitrailleuse and four munition boxes, eight munition boxes or one wounded man. Type no. 3 carries either the mortar or five boxes of mortar shells. In the three types, the cargo is secured during transportation by buckled leather straps sidewise and lengthwise. The towlines of leather or rope are fastened one on each side or one in the middle at the front end of the sledges."—SIPRE.

Contains a short review of Ostyak folklore, and text (in German) with comments, of an heroic legend on *Uliunk* (a small god), noted down by the writer near Surgut in 1888-89.

Copy seen: DLC.

31177. PÁPAI, KÁROLY, 1861- . Der Typus der Ugrier. (Ethnologische Mitteilungen aus Ungarn, Bd. 3, 1893, Heft 9-10, p. 257-60; 1893-94, Heft 11-12, p. 261-76, tables) 10 refs. *Title tr.*: The Ugrian [anthropological] type.

Contains a comparative anthropological study on Voguls, Ostyaks, Zyryans, Samoyeds, Lapps, Finns, Mordvins, and Cheremis, based on material collected by writer in 1888-89, and on the literature. Separate chapters deal with stature, head index, color of skin, ears and eyes, and form of nose and face. The racial characterization of the "Ugrian type" is given (p. 269-71), and comparison of the Siberian Ugrians with present-day Hungarians is made. The "Ugrian type" presumably was formed by the crossing of two races: a light, or European, and a yellow, or Mongolic. The light racial features are considered as older and predominant. The absorption of the yellow racial elements probably occurred at a time when the Ugrians still lived in their southern homeland.

31178. PÁPAI, KÁROLY, 1861- . Unter Wogulen und Ostjaken. (Ethnologische Mitteilungen aus Ungarn, 1891. Jahrg. 2, Heft 2-5, p. 65-67) *Title tr.*: Among the Voguls and Ostyaks.

Contains a short report on a trip to the land of Voguls and Ostyaks, made in 1888-89 with Bernát Munkácsi. Localities visited were: Pershina village on the Sos'va River, and the basin of the same river, also the regions of the southern Loz'va, Pelym and Konda Rivers, and Obdorsk. Author's principal tasks were the anthropological investigation of natives and collecting of museum objects. Measurements were taken on 145 Ostyaks, 100 Voguls, 50 Zyryans, and 32 Samoyeds. An ethnographical collection of up to 500 specimens of clothing, household utensils, hunting and fishing equipment was made, also 200 photographs were taken. An anthropological characterization of Voguls and Ostyaks is given.

cheskikh nauk 1938. no. 3, p. 109-114) *Also pub.* in his *Sobranie trudov* [Collected works, edited by S. M. Rytov], Moskva, Izd-vo Akademii nauk SSSR, 1948. p. 158-64. *Title tr.*: Work of the Commission for Research on Radio Wave Propagation under Arctic Conditions.

Contains outline (by its president) of the Commission's efforts in 1937 to find out the cause of disturbances. The many observed cases were noted to coincide with snow storms and magnetic disturbances. B. F. Arkhangel'skii (q. v.) in his report on observations at Tikhaya Bukhta in Franz Josef Land, 1932-33, claims such disturbances to be caused by variation in ionization of the upper layers of atmosphere (layers D, E and F) and variations of the earth's magnetic field. It was noticed also that long radio waves pass through disturbed areas, and the Commission recommended to Glavsevmorput' that the power of long-wave stations be increased and the length of antennae be extended.

Geomorfologiya, p. 107–120, 11 illus. on plates) **Title tr.:** Experience in use of air photographic methods in geomorphological investigations in the taiga zone of central Siberia.

Contains methodological notes based on results of air photography and aerial surveying in northern and north-eastern regions of Siberia, inaccessible or difficult of access. The advantages of these methods, organization and stages of work, interrelation with ground surveying, photointerpretation of various geomorphological formations are discussed and illustrated. No geographical features are mentioned by name.

Copy seen: DLC.

31190. PARMUZIN, IŮ. P. Rasprostraneniye i osobennosti karsta Sibiri. (Moskovskoe obshchestvo ispytatelei prirody. Bülleten', 1953. nov. ser., t. 58, otdel geol., v. 28, no. 4, p. 103) **Title tr.:** Distribution and peculiarities of karst formations in Siberia. Author's

summary of paper delivered on Mar. 25, 1953.

"Cave formations in Siberia are associated with permafrost and are usually discovered at considerable depths in regions of permafrost degradation. Caverns appear more frequently under permafrost layers as a result of sub-permafrost water, or in thawed spaces of frozen soil. The processes of cave formation favor permafrost degradation."—SIPRE. **Copy seen:** DLC.

31191. PASSMORE, NANCY V., and others. Some effects of freezing on metabolic processes. (In: Alaskan Science Conference . . . 1951. Proceedings, pub. 1953, p. 97–100, 3 tables) 14 refs. *Other authors:* Vivian S. Porter, and E. M. Scott.

Contains a report on the effects of freezing on the oxydative processes of mitochondria, enzymes with or without substrates, and coenzymes. The destructive effect of low temperature on cellular enzyme systems is believed to consist in abolishing their structural and spatial organization. The damaging effects of cold on cells is thus not confined to gross changes alone, like (e. g.) formation of ice crystals.

31193. PATERSON, THOMAS THOMSON, 1909– . Anthropological studies in Greenland. (Royal Anthropological Institute of Great Britain and Ireland. Journal, 1939. v. 69, p. 45–76, 8 diagrs., text map) 20 refs.

Contains study of Eskimo winter houses and the development of the harpoon head in various districts of Greenland: Melville Bay, Disko Bay, Kangamiut, Angmagssalik, and Dødemandsbugten. Ethnological material collected on

the Wordie expedition to Melville Bay and Baffin Land in 1934 was utilized. "The various forms of winter house in Greenland have been differentiated into nine main groups, subdivided to produce nineteen types in all. Their historical distribution in Greenland, as shown by archaeological excavation, has been tabulated, and a progressive evolution from the round house to the rectangular, and finally to the large common house has been demonstrated. This evolution was seen to have been initiated in Disko Bay, whence it spread to other regions of Greenland. A consideration of the development and distribution of the modern type of harpoon head revealed a similar trend. Finally, autochthonous development of the rectangular house has been postulated, and the geographical factors governing this development discussed".

31194. PATKANOV, SERAFIM KEROPOVICH. O priroste inorodcheskago naseleniia Sibiri; statisticheskie materialy dlia osviescheniia voprosa o vymiranii pervobytnykh plemen. S.-Peterburg, Akademii nauk, 1911. 4, 210 p. **Title tr.:** On the growth of the non-Russian population in Siberia; statistical materials for clarification of the question of the dying-out of primitive tribes.

On the basis of censuses of 1853, 1859, 1897, and other available data, the trends in vital statistics among the Ostyaks, Voguls, Samoyeds, Yakuts, Yeniseians, Yukaghirs, and Kamchadals are discussed. Economic conditions, acculturation, causes of the diminishing numbers of certain native tribes, and other problems are taken into consideration. The author seems to be opposed to an unqualified statement that the Siberian natives are doomed to disappear in the near future, he agrees, however, that some smaller tribes are vanishing.

31196. PATKANOV, SERAFIM KEROPOVICH. Über die Zunahme der Urbbevölkerung Sibiriens; ein Beitrag zur Frage über das Aussterben der Naturvölker. (Keleti szemle, 1909. t. 9, p. 54-94, tables) **Title tr.:** On the increase of the indigenous population of Siberia; contribution to the question of the dying-out of the native peoples.

Contains data and analysis of vital statistics of Siberian natives, on the basis of ten statistical surveys since 1722, the census of 1897, and the report of the second tax commission of 1828-35. The native population of Siberia is generally increasing although slowly: from 1797 to 1897 the total number increased 119 percent. The trend of increase or decrease, however, varies from tribe to tribe; for example: the agricultural and cattle-breeding Tungus increased in number, and the nomadic Tungus remained stationary or even decreased; Golds and Orochis decreased; the Ostyaks are decreasing and the Voguls remain stationary; the Ostyak-Samoyeds are dying out, the Yurak Samoyeds stationary, and the Tawgis Samoyeds increasing; Yakuts are slowly increasing except in the northern provinces where they are on the decline; Karagas (reindeer Samoyeds in the Sayan Mts. and Biryusinsk taiga) are dying out rapidly; the Yeniseians, Yukaghirs and Chuvantzy also are on the way to extinction; the number of Chukchis dropped 25 to 30 percent, the Kamchadals lost two thirds of their population between 1740 and 1897; the Asiatic Eskimos, Koryaks, Gilyaks, and Aleuts (including those on the Commander Islands) are diminishing, too. Generally, the settled natives, having more contact with Whites (Russians), are dying out more rapidly than their nomadic brothers. The causes of extinction are: famines, epidemic diseases, especially small-pox (e. g. in 1884-85), high child mortality among the nomads, alcoholism and assimilation with Russians. The cattle breeders and agriculturists have a better chance of survival than hunters and fishers; the reindeer nomads are stationary or increasing slightly. The author stresses the importance of mode of life and forms of protection as factors in changes in vital statistics. He divides Siberia into three zones: (1) the northern zone of hunters, fishers and reindeer nomads, inhabited by Ostyaks, Voguls, Samoyeds, Lamuts, Dolgans, and Paleo-Siberians;

all are declining in number or stationary; (2) the zone of cattle breeders, inhabited by Yakuts and Buryats, who are all increasing in number; (3) the zone of agriculturists and cattle breeders of southern Siberia, inhabited by Tatars, Buryats, Tungus, and partly by Voguls, all of them rapidly increasing in number.

PAUL, JOHN RODMAN, 1893- Epidemiological observations on Eskimos from the north coast of Alaska. *See* Alaskan Science Conference, Nov. 1950. *Proceedings, 1951.* No. 20117.

31201. PAULS, FRANK P., and others. Distribution of blood factors among the Eskimos, Indians, and Whites of western Alaska. (*In:* Alaskan Science Conference . . . 1951. *Proceedings, pub.* 1953. p. 255-59) *Other authors:* B. B. Victors, and M. W. Dodson.

Contains a report of preliminary findings on 5,205 blood specimens from Eskimos along the Bering and arctic coasts, Indians from the interior and Whites from Palmer and Fairbanks. ABO blood groups, sub-types of A and AB, and the Rh factor were examined.

Copy seen: CaMAI; DLC.

31202. PAULS, FRANK P., and others. Distribution of blood groups among the Eskimos, Indians, and whites of western Alaska. (American journal of human genetics, Sept. 1953. v. 5, no. 3, p. 252-56, 4 tables) 8 refs. *Other authors:* B. B. Victors, and M. W. Dodson.

Contains a preliminary report on blood-group variations among the Eskimos (2,954), Whites (1,621), Indians (333), and some members of mixed race, from western Alaska. ABO types, N type and Rh were determined. The problem of racial mixtures in this area is discussed on the basis of these findings: mixtures of

Eskimo or Indian with White were observed, but little Eskimo-Indian mixture in Eskimo-Indian border areas on the Yukon and Kuskokwim; Eskimos of the Bering Sea areas are not found to have mixed with Whites to any appreciable extent.

31207. PAULSON, IVAR. Contributions to the economic ethnology of the Ostyak, a summary. Pinneberg, Germany, 1947. 7 p. tables. (Pinneberg, Germany. Baltic University. Contributions, no. 37)

Contains an abstract of a cultural-analytic thesis for Ph. D. degree at Hamburg University: *Beiträge zur Wirtschaftsethnologie der Ostjaken*, 1946, (180 p. typescript), based on the ethnographical collections at the Hamburg Ethnological Museum and on literature. Three principal branches of Ostyak economic life, the hunting, fishing and reindeer breeding, are investigated with an attempt to determine which cultural elements (implements, techniques, etc.) are of ancient Finno-Ugric origin, and which have been borrowed from neighboring Samoyeds, Tatars, and Russians. The statistical method is applied for evaluation of cultural elements in regard to their different ethnical origins. Notes on migration of Ostyaks from the Pechora region to their present home are added.

Account of the capture of a large bowhead in Beaufort Sea, July 1900, with photographs by the author, a veteran whaler and head of the Canalaska Trading Co.

Copied seen: CaMAI.

31220. PEDERSEN, P. O., 1910- . Anatomical studies of the East Greenland Eskimo dentition. (International Congress of Americanists. 29th, New York, 1949. Selected papers, v. 3, *Indian tribes of aboriginal America*, Chicago, 1952. p. 46-49)

Contains condensed report on the permanent dentitions of Eskimos of unmixed East Greenland descent, based upon records of 702 modern living Eskimos, and 52 adult skulls (full report: *Arctic Bibliography*, No. 13261). The dentition is considered as a racial factor, and it confirms on several points the Mongoloid ancestry of Eskimos. No decisive support can be lent from the present study of dentition, to the view that the Eskimos are either a very primitive or a very far advanced race in evolutionary respect.

31221. PEDERSEN, P. O. 1910- . Dental investigations of Greenland Eskimos; Summary. (Royal Society of Medicine, London. Proceedings, Oct. 1947. v. 40, no. 12, p. 726-32, 2 fig., table)

Contains a summary of three seasons' (1935, 1937, 1939) work in East and West Greenland covering over 3000 cases, and examination (in 1936) of 525 Greenland Eskimo skulls in Copenhagen University Institute of Medical Anatomy. Data are presented on dental morphology and anatomy including anomalies; structure

of teeth; dental lesions and attrition; caries; parodontal diseases; irregularities in tooth position. The account is preceded by a brief description of Greenland, its Eskimo population, their food habits (past and present); administration, etc.

Copy seen: DLC.

31222. PEDERSEN, P. O., 1910- . Investigations into the incidence of dental caries in ancient and modern Greenlanders. (*In: Congrès International des Sciences Anthropologiques et Ethnologiques*. 2d, *Copenhagen*, 1938. *Compte rendu*, 1939. p. 120-22)

Contains report based on author's investigation of 526 ancient Eskimo skulls and 2,549 modern Eskimos from East and West Greenland. In ancient Greenland the incidence of caries was exceedingly low: of 6,606 permanent teeth in the 526 skulls, only two showed decay. It is notably increased among East and West Greenlanders now living in villages (in permanent tooth to 1.2 and 9.2 percent respectively), especially those close to the trading stations (12 and 35.9 percent). This is due to the thorough and sudden change from traditional to white man's food.

31223. PEDERSEN, P. O., 1910- , and **D. B. SCOTT.** Replica studies of the surfaces of teeth from Alaskan Eskimo, West Greenland natives, and American whites. (*Acta odontologica scandinavica*, Sept. 1951. v. 9, fasc. 3-4, p. 261-92, 23 figs., 6 tables) 12 refs.

Contains an account of microscopic studies of metal-shadowed collodion replicas from permanent teeth of: (1) 100 Alaskan Eskimo skulls in the Smithsonian Institution; (2) 152 modern West Greenland natives of the Julianehaab region, extracted during 1942-45; (3) 565 white dental office patients from Washington, D. C. A comparison of the microscopic structures (perikymata, enamel rod ends, micro-pits, etc.) of the teeth of the three ethnic groups is presented, with information on their disappearance with age; observations and comparisons of macroscopic surface irregularities are also included.

31224. PÉGUY, CHARLES PIERRE. *Le neige.* Paris, Presses universitaires de

France, 1952. 120 p., graphs, maps, diags. **Title tr.:** Snow.

"The meteorological conditions favoring the occurrence of snow are discussed, and snow measurements are defined. A map of snowfall for the Northern Hemisphere shows the large amount of snow falling in North America compared to that in Siberia. Crystallography and stratigraphy of fallen snow as a basis for avalanche study is presented. The extent and duration of the Alpine and Siberian (arctic) snow cover are compared. . . . The Siberian (arctic) cover is a result of spasmodic snowfalls totalling no more than 1 m., and occurring mainly at the beginning of the cold season. This cover is seldom more than 30 cm. thick, persists from six-eight months, is not stratified, and provides an excellent surface for foot and sled travel. Perpetual snow, its contribution to existing glaciers, the perpetual snow line as an index to climatic change, and the influence of snow on man are discussed."—SIPRE.

31232. PENNER, C. M. Note on radiative cooling in the free atmosphere over Arctic Bay. (Journal of meteorology, Apr. 1948. v. 5, no. 2, p. 69-70, graphs) 3 refs.

Data used in the study were results of twice-daily radiosonde ascents at Arctic Bay (northern Baffin Island; 73°00'08" N. 85° W.) during Sept. 1945-Aug. 1946. Only soundings taken with clear skies were used, 53 such ascents being made June-Aug., 93 during Dec.-Feb. An increase of radiative cooling with height up to approximately the 600-500 mb. layer was found. *Data* for summer and winter are given. Net radiative cooling of atmosphere in the Arctic is approximately 0.5 C. to 1.0 C. per day. Effects of observed radiative cooling on the lapse rate in the 800-500 mb. layer are briefly discussed.

31250. PEREZ, HENRY T. Alaska, land of construction opportunity. (Con-

struction methods and equipment, Dec. 1952. v. 34, p. 60-65, illus., map)

"Construction operations in Alaska are similar to those in the continental U. S. except in Fairbanks where permafrost is encountered. Gravel type permafrost is sufficiently consolidated to settle evenly upon thawing. Silty permafrost becomes mushy and must be removed and placed with non-frost-susceptible material. The extent of permafrost is determined and mapped, the ground is thawed with steam jets or consolidated by blasting where necessary, and the degree of compaction checked by probes and test pits before starting foundation construction. Frost-susceptible material on runway sites is removed to the depth of seasonal frost penetration. Interior work continued through the winter of 1950-51 on 60 percent of the projects and some outside work was done at sub-zero temperatures under heated tarpaulin tents. Underground utilities are encased in insulating concrete or laid in concrete tunnels where winter temperatures are more severe."—SIPRE.

31251. PEREZ, MICHEL. Glaciologie. (*In:* Expéditions polaires françaises. Expédition arctique, 1948-1951. Campagne au Groenland 1950; rapports préliminaires, 1952. Série scientifique, no. 15, p. 65-86, incl. 6 illus. on 2 plates, 4 tables, fold. map)

Contains a discussion of the glaciological work on the Greenland inland ice done by a four-man party led by the writer between June 8 and Sept. 7, 1950. Equipment is listed in detail and an itinerary given. Rates of melting and accumulation were measured in the ablation and accumulation zones, measurements made of the surface of the inland ice to determine rates of movement, and density measurements taken. Temperature profiles were made in the drill holes, stratigraphic sections of ice and snow from the holes examined, and effects of compression studied. Methods of drilling are discussed, including work done by the Benoto drill and thermal drills in different areas. Results of the studies for the various camps are given in tables, and a map shows the location of drill holes and profiles taken between Camp IV and the Central Station. *Copy seen:* CaMAI.

Contains extracts, July 27-Aug. 21/22, 1952, from a log kept by the writer, an engineer of the Decca Radar Co. during a voyage on the S.S. *North Anglia* from Cardiff, Wales, to Churchill, Manitoba, and return. The movements of the various icebergs sighted and their effects on the radar picture are described, with drawings illustrating each iceberg, its height, angle of slope, the ship's line of approach, and the wind direction. The state of the atmosphere, abnormal effects due to visual refraction, and the operation of radar in the fogs encountered, are noted. It is concluded that the detection ranges of the icebergs "compare quite favorably with those from land of similar height," and that the slope presented to the radar beam is the most important factor in iceberg detection. Effects of air temperature and density changes on the radar beam are discussed, and the target qualities of land ice, growlers, floebergs, hummocks, floes or field ice, and leads briefly summarized. Observations and results are recorded on tables, and sketch maps show the ship's course with relation to the ice encountered.

Tiedonnannot, 1951, pub. 1952. v. 6, no. 2, p. 102-104) **Title tr.:** Notes on aquatic vegetation in the communes of Kuusamo and Salla, in northern Finland.

From 17 lakes and eight rivers and rivulets in northeast Finland, 33 species of aquatic plants were collected and are listed. Summary in English.

Copy seen: MH-Z.

31263. PESONEN, NILO, 1902- . Rassische Zusammensetzung des finnischen Volkes. (Nord, 1941. v. 4, no. 2-3, p. 106-115, map) **Title tr.:** The racial composition of the Finnish people.

Contains review of anthropological investigations on the Finnish population. The works of the older (Retzius, Virchow, Nordenstreng) and recent anthropologists (Vesterlund, Viikman and Kajava) are summarized; most of the Finnish people are of tall stature, mesocephalic, have light eyes and blond hair; the pure Nordic race is represented by 11.1 percent of the entire population, and the East Baltic race by 15.2 percent. Among the racially mixed population 31.9 percent belong to the medium dark type, 22.3 percent to the dark type, and to the black type 4.9 percent of the entire population. Though Lappish influence is evident in the northern part of the country, it is insignificant, and not

responsible for all dark components among the Finns of today, the dark Alpine race having probably come into Scandinavia from western Europe.

31264. PESTEL', IVAN BORISOVICH, 1765-1843. Istoricheskaiâ zapiska o Kamchatke. (Kazan'. Universitet. Obshchestvo arkhologii, istorii i étnografii. Izvestiâ, 1926. t. 33, vyp. 2-3, p. 175-87) **Title tr.:** Historical report on Kamchatka.

Contains introductory note by N. N. Firsov, and the full text of a report on the situation in Kamchatka submitted to Emperor Alexander I in 1810 by the governor-general of Siberia, I. B. Pestel'. The report gives a survey of the Russian conquest of Kamchatka. It emphasizes the cruelties perpetrated upon the Kamchadals by Cossacks and the maladministration of government agents which destroyed the economy of Kamchatka and reduced native population. An attempt in 1803-10 to introduce agriculture into Kamchatka by military colonization ("landmilitiâ") is described and the causes for its complete failure analyzed.

31270. PETITOT, ÉMILE FORTUNÉ STANISLAS JOSEPH, 1838-1917. Accord des mythologies dans la cosmogonie des danites arctiques. Paris, E. Bouillon, 1890. xiii, 492 p. **Title tr.:** Agreement of mythologies in the cosmogony of the arctic Danites.

Contains material and discussion on the mythology and folklore of northwest American Indians, termed generally "Danites," or "Danes," (*Déné*) and (in more limited way) of Eskimos, in comparison with those of ancient Greece, Rome and Israel, and with occasional reference also to "European Danes or Scandinavians." The material is drawn from literature and from author's observations mainly among Athapaskan tribes of Mackenzie District: Hare, Kutchin and others, but extending to Tlingits, Aleuts, etc. Discussion deals with their fetishes, magic practices, the supreme deity, lunar myths, legends on the deluge, beliefs in man-dogs, man-bears, woman-birds, etc.

31272. PETITOT, ÉMILE FORTUNÉ STANISLAS JOSEPH, 1838-1917. Quinze ans sous le cercle polaire: Mackenzie, Anderson, Youkon. Paris, E. Dentu, 1889. xxi, 322 p. text illus., 18 plates, fold. map. **Title tr.:** Fifteen years beyond the Arctic Circle: Mackenzie, Anderson, Yukon.

Of five books planned as memoirs of the author's missionary work and exploration in northwest Canada and Alaska, 1862-82, this is the third. It deals with his trip down the Mackenzie to his mission station at Fort Good Hope in 1864; a journey down the Anderson River in 1865; and in 1870, a 50-day trip to and down the Yukon to Fort Yukon and return to the mission. Life at the fort, and mission are described. Indians of various Athapaskan tribes are noted as encountered in travels: Hare, Mountain,

Nehani (Déné) Kutchin (Dindjie) and Eskimos (Chigliit). Description is given of terrain, rivers and mountains, and attempts at mapping relatively or absolutely unknown areas. The severity of arctic winter, travel conditions, the life of natives and whites, their character, economy and social relations are sketched. Various customs, scenes of famine, cannibalism and infanticide are noted, also reaction to the author's missionary activities. Author's sketches of native types and individuals, natural features, etc. illustrate the text. Author's map (scale 1:2,100,000) of the Great Slave - Great Bear - Mackenzie region shows his (and others') itineraries, missions, forts, geologic characteristics and geographic features (native and French names), locations of native tribes, etc. Reviewed by G. Gravier, q. v. **Copy seen:** MH.

31274. PETRI, B. É. Sibirskii paleolit. (Irkutsk. Universitet. Sbornik trudov, 1923. vyp. 5, p. 209-253) 31 refs. **Title tr.:** The Siberian paleolithic.

Contains review of all paleolithic finds in Siberia to 1922, presented in three sections, designated Tomsk, Yenisey, and Angara. A complete mammoth skeleton was discovered in 1896 on the banks of the Tom River with indications of contemporary man. Another paleolithic site was found in 1884 near Krasnoyarsk and investigated by I. T. Savenkov. A third site was discovered in 1871 on the Ushakovka River, tributary to the Angara, near Irkutsk. Finds from all these sites, however, were destroyed by a great fire in 1879 in the Irkutsk Museum. Finally noted are the writer's extensive excavations in 1920-

1921 of a site called "Verkholenskaya Gora," in Irkutsk district where he secured 2,872 objects preserved at Irkutsk University. A classification and description is given of these objects: artifacts made of mammoth's tusk (a kind of dagger), of bones of the northern reindeer, ox, and horse (harpoon heads, chisels, etc.), and, the most numerous, stone artifacts (pointed flakes, prism-like knives, graters, scrapers, axes, etc.). The culture of Verkholensk Mts. may be dated into the Magdalenian period, some flakes, however, are of Solutrean type.

31278. PETROV, IVAN, 1842- . The limit of the Inuit tribes on the Alaska coast. (American naturalist, July 1882. v. 16, no. 7, p. 567-75)

Contains an account of the distribution of Eskimos, Innuits and Tlingit Indians in southern Alaska, based on author's observations, extending over a period of several years. The Eskimos migrated along the Alaskan coast southward and eastward until they met the Tlingits, and until they were stopped by a long stretch of inaccessible cliffs and icy promontories. The whole movement originated from the American arctic coast at a comparatively recent period, subsequent to the invention of the kayak, and the Eskimos probably never reached further south than Icy Bay and the glaciers of the Mt. St. Elias Range. The theory of Dall, who supposed great antiquity of the human occupancy of Alaska, is criticized. In a discussion of this paper recorded in Anthropological Society of Washington, Transactions, 1883, v. 2, p. 3-4, Petrov added some information on Eskimo demography, morals, family life, and on the hostility of the Tlingits.

Contains a description and tabular data on age, maturity and meristic characteristics of the lesser sand-eel *Ammodytes tobianus* taken in July 1926 near Teriberka and Vostochnaya Liĭsa.

Copied seen: DLC.

31286. PÉWÉ, TROY LEWIS, 1918- . Brief review of Pleistocene events and climatic changes in Alaska. Juneau, Sept. 1953. 14 p., table. Mimeographed. (U. S. Geological Survey. Reports; open file series, no. 226) 38 refs.

Contains preliminary review prepared for presentation at the Fourth Alaska Science Conference, Juneau, Sept. 29, 1953. The Pleistocene is divided into pre-Wisconsin and Wisconsin periods. Events in southern and central Alaska, Seward Peninsula, and the Brooks Range are considered in turn within these periods. Two pre-Wisconsin and two Wisconsin glacial advances are recorded, separated by interglacial intervals probably warmer than the present. Post-Wisconsin climatic changes are summarized.

Copied seen: DGS.

31287. PÉWÉ, TROY LEWIS, 1918- , and others. Multiple glaciation in Alaska, a progress report. Washington, D. C., 1953. 13 p. fold. map, table. (U. S. Geological Survey. Circular 289) 32 refs.

Previous glacial investigations are listed, and multiple glaciation in the following areas is discussed in separate papers: (1) northern Alaska Peninsula and eastern Kilbuck Mountains, by E. H. Muller; (2) Upper Cook Inlet region, by T. N. V. Karlstrom; (3) southwest Kenai Peninsula, by D. B. Krinsley; (4) Alaska Range in the upper Kuskokwim region, by A. T. Fernald; (5) Nenana River valley, by C. Wahrhaftig; (6) Big Delta area, by T. L. Péwé; (7) Seward Peninsula, by D. M. Hopkins; and (8) the Sagavanirktok-Anaktuvuk region of northern Alaska by M. L. Detterman.

A tentative correlation of Alaskan glaciations is added. In the eight areas discussed, which represent several major geomorphic divisions, similarities in glacial deposits show that the areas have had "broadly similar glacial histories." The latest major glaciation was probably late Wisconsin in age, probably equivalent to the Mankato substage in north central United States, and the next earlier major glaciation probably early Wisconsin. Evidence exists for older pre-Wisconsin glaciations, but deposits are few and poorly preserved and correlation difficult. Minor glacial advances have occurred within the last few centuries.

31290. PHILIPPE, JEAN. Eskimo psychology. (Eskimo, 1947, v. 5, p. 5-7; 1948, v. 8, p. 8-15; v. 9, p. 2-7; v. 10, p. 2-7; v. 11, p. 5-7; 1949, v. 12, p. 7-10, illus.)

Contains anecdotal introduction to Eskimo mentality, drawn from experiences of a Catholic missionary among the pagan and Christianized Eskimos living on the west coast of Hudson Bay. He finds the Eskimo lacking in analytic and coordinated thinking, though intelligent and apt at understanding advantages in material matters. Some typical features of Eskimo life are sketched; behavior at childbirth, education of children, betrothal and marriage customs (mates are chosen by parents). Family life, causes for divorce, cases of bigamy and polyandry, wrestling duel for wife, gambling game *nooglootak* (threading a harpoon through the hole in the rotating caribou antler), the custom of sex hospitality and trading of wives, and cases of voluntary death are described.

31297. PICHOTKA, JOSEF, and R. B. LEWIS. Effect of rapid and prolonged rewarming on local cold injury. (U. S. Armed Forces medical journal, Sept. 1951. v. 2, p. 1293-1310, 4 fig., 3 tables) 15 refs.

Contains a study of 314 rabbits with legs exposed for 30 minutes to -12° C. and -15° C.; spontaneous rewarming in air of room temperature resulted in superficial necrosis in 20 and 90 percent of these cases; rapid thawing in water of 42° C. for 5-8 minutes almost entirely prevented cutaneous necrosis, and decreased muscular necrosis; prolonged rewarming in 42° water, up to one hour, gave the same results as rewarming for 5-8 minutes; animals with rapidly rewarmed legs showed a better appearance and preserved better function of the injured legs, than those left to spontaneous rewarming.

Copy seen: DLC.

31298. PICHOTKA, JOSEF, and others. Influence of general hypoxia on local cold injury. (Texas reports on biology and medicine, Fall 1951. v. 9, no. 3, p. 601-612, fig., 5 tables) 5 refs. *Other authors:* R. B. Lewis, and U. C. Luft.

Contains an account of experiments with rabbits exposed to local cold, and subjected to hypoxia of a simulated altitude of 20,000 ft., simultaneously, prior to, and following cold exposure. Hypoxia did not affect the extent of cold injury (necrosis) if present only during exposure or up to 30 minutes earlier. Longer preceding hypoxias influenced the cold injuries in a complicated and irregular manner, some (one-two hours duration) increasing the injuries, others (two-three hours) having no effect, etc. Hypoxia following cold exposure increased the

extent of necrosis in proportion to its duration.

31299. PICHOTKA, JOSEF, and others. Sequence of increasing local cold injury. (Texas reports on biology and medicine, Fall 1951. v. 9, no. 3, p. 613-30, fig., 3 tables, 7 graphs) 4 refs. *Other authors:* R. B. Lewis and E. Freytag.

Contains a study of clinical and anatomical changes, and temperatures of the skin and deep muscle of legs of rabbits exposed for 30 minutes to cold of +5° to -40° C. Loss of muscular power, of spreading reflex of the toes, absence of response or hyperreaction to pinprick, all temporary, resulted from exposure to temperatures below -12° C. In the last case complete loss of the leg often followed.

31300. PICHOTKA, JOSEF. Das Verhalten der Schilddrüse bei Versagen der Wärmeregulation nach protrahierter Belastung. (Naunyn - Schmiedebergs Archiv für experimentelle Pathologie und Pharmakologie, 1952. Bd. 215, nr. 3-4, p. 317-27, 5 illus.) 13 refs. *Title tr.:* The behavior of the thyroid following failure of thermal regulation due to protracted stress.

Contains a report on guinea-pigs made hypothermic for one to several weeks. When rectal temperature reached 34° C., there occurred a sudden, sharp drop in that temperature leading to death, though external conditions remained unaltered. These animals showed an extreme or complete loss of colloid from the thyroid. The significance of this behavior is discussed. **Copy seen:** DSG.

31301. PICHOTKA, JOSEF. Das Verhalten der Schilddrüse und der Körpertemperatur bei der Adaptation an niedere Umgebungstemperaturen. (Naunyn-Schmiedebergs Archiv für experimentelle Pathologie und Pharmakologie, 1952. Bd. 215, nr. 3-4, p. 299-316, 6 illus., 2 tables) 43 refs. *Title tr.:* Changes in the thyroid and in body temperature during adaptation to low environmental temperatures.

Contains an investigation on rectal temperature and weight and histology of the thyroid of guinea pigs kept at low temperatures (0° to 3° C.) for periods of 5-97 days. Body temperature showed considerable individual variation; in many animals there was a prompt or delayed drop of 0.5°-1.0° C. with a return to normal after 30-40 days of

cold exposure. The histological picture showed a decrease of colloid in the first three weeks of exposure (due apparently to increased utilization of it), followed by an increased production in the central follicles.

31302. PICK, LEWIS A. The story of Blue Jay. (Military engineer, July-Aug. 1953. v. 45, no. 306, p. 278-86, illus., map)

Contains a popular account of the construction (by the Army Corps of Engineers in collaboration with the Navy, Air Force, and civilian construction companies) of the air base at Thule, northwest Greenland, by the general in charge of the execution of the project. The early problems of its planning, of transportation, personnel, of its equipment, and of the actual operation are outlined. The project was proposed in Dec. 1950, reconnaissance work carried out at Thule early in 1951, the main convoy with men and equipment arriving in mid-July when ice conditions permitted. By fall 1951, a large part of the necessary construction had been completed.

31303. PICK, W. H. A note on the upper wind observations taken in North Russia in 1919. (Great Britain. Meteorological Office. Professional notes, 1923. v. 3, no. 32, tables)

"Pilot balloon ascents at three stations in NW Russia between Feb. and Sept. 1919 analyzed. Percentage frequencies and mean velocities given to 16,000 ft. for Murmansk. Analyses for Arkhangel'sk and Lumbushi [i. e. Lumbovka?] given only to 10,000 ft."—*Meteorological abstracts and bibliography*, May 1953. v. 4, no. 5, p. 618. *Copy seen:* DWB.

31304. PICKERING, G. W., and M. KISSIN. The effects of adrenaline and of cold on the blood pressure in human hypertension. (Clinical science, London, 1936. v. 2, no. 2, p. 201-207, fig., 2 tables) 9 refs.

Contains a report of a study on patients with essential hypertension and with chronic nephritis, and of normal controls. When submitted to a standard cold stimulus, the rise in blood pressure was larger in old subjects than in young; was independent of the resting blood pressure and seemingly related to the degree of discomfort. The material was too small to elucidate the question whether the rise in blood pressure is larger in sub-

jects with hypertension, than in normal persons of similar age.

31306. PIÉRY, MARIUS, 1873-, editor. Traité de climatologie biologique et médicale. Paris, Masson et Cie, 1934. 3 v.: 2,664 p. *Title tr.:* A treatise of biological and medical climatology.

Contains an extensive study, encyclopedic in character, prepared by about 150 specialists from all over the world. Climate is dealt with in its broad meaning, in its effects on plants, animals and especially on man in health and disease. A relatively large part of the study (v. 3) is devoted to the utilization of climate for therapeutic purposes: health resorts, spas, sanatoria in various parts of the world. The following papers from v. 1-2, bearing more directly on arctic problems, appear in this Bibliography under their authors' names:

Contains note on some features of the incidence of the abnormal ionization in the E- and D-regions of the ionosphere during periods of magnetic disturbance. Two types of storm disturbance are selected and discussed in terms of three zones in the polar regions, in each of which the incidence of the phenomena varies in a fairly regular manner.

31309. PIHLAINEN, JOHN A. *Investigations of small buildings in permafrost*. (National Research Council of Canada. Associate Committee on Soil and Snow Mechanics. Technical Memorandum no. 19, Apr. 1951. Proceedings of the 1950 Soil Mechanics Conference. p. 11-15)

Contains results of a survey of construction techniques used for small building foundations on permafrost. The survey was made by a four-man party at Yellowknife, Hay River, and Fort Resolution on Great Slave Lake, and in

the Mackenzie River valley, June-Aug. 1950. Stops were made at the settlements of Fort Providence, Fort Simpson, Fort Wrigley, Fort Norman, Norman Wells, Fort Good Hope, Arctic Red River, Fort MacPherson, and Aklavik. Reports contained general descriptions of the settlements and a study of every "white man" building in each settlement. Over 250 buildings were reported on and 800 terrain and building photographs taken. Three main types of permafrost foundations were found in the Mackenzie River district and several minor types noted. Recommendations for future study are given. A discussion of the paper includes a comment on the permafrost deposit at Yellowknife, Great Slave Lake.

31310. PIKIN, K. I. *Materialy ob otmorozheniakh*. (Voenno-sanitarnoe delo, 1941, no. 2, p. 26-31) *Title tr.*: Materials on frostbite.

Contains an account of first aid in frostbite; body regions mostly affected; clinical course; laboratory findings (erythrocyte sedimentation rate blood sugar content); complications; therapy: open method followed by baths, physiotherapy, etc., vitamin-rich diet.

Copy seen: DSG.

31311. PILGERSTORFER, WALTER. *Die Kriegsnephritis*. (Wiener klinische Wochenschrift, May 21, 1943. Jahrg. 56, Nr. 19-20, p. 330-35) 18 refs. *Title tr.*: War nephritis.

Contains an account on the aspects, clinical course, therapy and prognosis of war nephritis and its difference from post-anginous glomerulonephritis. Its etiology, especially the role of cold exposure are also discussed, as well as the beneficial effects of the hunger and thirst therapy of Volhard. The disease is almost exclusively observed among soldiers in the field.

Copy seen: DSG.

31312. PILGERSTORFER, WALTER. *Zur Stellung der Kriegsnephritis im Nephritis-problem*. (Wiener medizinische Wochenschrift, Sept. 25, 1943. Jahrg. 93, Nr. 38-39, p. 523-28) *Title tr.*: Status of war nephritis in the nephritis problem.

Contains an account based on observations during the Russian campaign and on reports from World War I. Includes a description of the peculiar traits of war nephritis as compared with the acute form, the role of cold exposure in

its etiology, clinical course and prognosis, blood vessel injuries in war nephritis, supporting factors, etc. The term "cold-hydrops" (Kältehydrops) is proposed instead of "war nephritis," due to the primary role of cold in its etiology. The disease was seldom seen among civilians. **Copy seen:** DSG.

Contains descriptions of 27 species and subspecies of barnacles collected by U. S. F. steamer *Albatross* in Japanese waters and Bering Sea during the expedition of 1906, with six species and five subspecies described as new; includes *Lepas pectinata beringiana* and *Balanus rostratus apertus* n. subsp. and *B. cariosus* native to Bering Sea. **Copy seen:** MH-Z.

31314. PILSBRY, HENRY AUGUSTUS, 1862-. The sessile barnacles (Cirripedia) in the collections of the U. S. National Museum; including a monograph of the American species. Washington, D. C. Govt. Print. Off., 1916. xi, 366 p., plates 1-76. (Smithsonian Institution, U. S. National Museum. Bulletin 93)

Contains data on the morphology, geographic distribution and classification of fossil and recent sessile barnacles (p. 1-14); descriptions of genera and about 175 species and subspecies of which 25 species and 29 subspecies are described as new (p. 14-336), with keys to genera and species, literature citations, synonyms, dimensions, critical notes and data on geographic distribution. Illustrations on 76 plates are appended, with explanations to them (p. 339-57) and an index of Latin names. The distribution of marine barnacles covers practically all arctic seas and that of fresh water and

fossil barnacles, Europe, Asia, North America and arctic islands. Special attention is given to distribution of American species. The study is based mostly on collections of the U. S. National Museum. **Copy seen:** DLC; MH-Z.

31315. PINART, ALPHONSE LOUIS, 1852-1911. Eskimaux et Koloches; idées religieuses et traditions des Kaniagmiutes. (Revue d'anthropologie, 1873. t. 2, p. 673-80) **Title tr.:** Eskimos and Kolochi; religious ideas and traditions of the Kaniagmiut.

Contains sketch of the Kaniagmiut, the most southerly tribe of western Eskimos, living on Kodiak Island and the southern Alaskan coast from Cook Inlet to the Kujulik Bay (formerly as far as Kupreanof Point). The Kaniagmiut (about 1,500) author found to be Russian Christians, and about half of them cross-bred with the Kolochi (Tlingit Indians) who once defeated them. Many of their religious ideas were taken over from the Tlingits, e. g. veneration of the great raven (*kahlazpak*), ritual dances and masks. The Eskimos, however, preserved their own religious beliefs in the most powerful spirit *hlamchoua*, five heavens and five rebirths of a man, the myth and worship of the sun and moon, etc. Masked dances were performed also by the Aleuts. The society of whale hunters, their secret hiding-places in caves, rites and mummies of the dead, are described, as they were found on Kodiak Island.

Contains practical advice for measuring distances between transit stations of polygon or traverse surveys, with steel tape, in the winter conditions of Soviet Arctic. *Copy seen:* DLC.

31320. PIROZYNSKI, W. J., and D. R. WEBSTER. Changes in distribution of potassium and sodium in rabbit muscle following cold injury. (Society for Experimental Biology and Medicine. Proceedings, May 1952. v. 80, no. 1, p. 168-71, 3 fig., 2 tables) 10 refs.

Contains a report on experimental, local cold injury in rabbits' muscle. Following the injury, a loss of potassium paralleling the disintegration of the cells was observed, with a progressive gain in sodium; at the same time an increase of potassium and a loss of sodium was found to take

place in uninjured muscle, suggesting an exchange of intracellular potassium for sodium in the frozen cells.

Copy seen: DLC.

32321. PIROZYNSKI, W. J., and D. R. WEBSTER. Experimental investigation of changes in axis cylinders of peripheral nerves following local cold injury. (American journal of pathology, May-June 1953. v. 29, no. 3, p. 547-54, illus.) 9 refs.

The sequence and nature of degeneration of axis cylinders in the rabbit's ear were studied, following exposure to cold of -20° to -30° C. Changes were observed as early as two hours after cold injury, and consisted of fusiform swelling of axons, with fibrillation and their final destruction. The changes were apparently the result of direct action of cold. *Copy seen:* DSG.

Contains an account of histological changes in rats and rabbits appearing 2-72 hrs. after exposure. Of the two phases observed, degeneration began almost immediately after exposure, regeneration about eight hrs. later. Degenerative changes in muscle are apparently the direct product of cold. Formation of thrombi was observed not earlier than 36 hrs. after exposure. *Copy seen:* DSG.

Account of experimental cultivation of tomatoes in the Igarka region 1941-1946: selection of strains, methods of growing seedlings, planting in protected ground, preparation of soil, its fertilization, and data on crops (up to 10,000 lb. per acre). *Copy seen:* DLC.

31324. PITCHER, P. N. The Giant Yellowknife operation. (Canadian min-

ing and metallurgical bulletin, Mar. 1953. v. 46, no. 491, p. 147-50, illus., text map) Also pub. as.: Canadian Institute of Mining and Metallurgy. Transactions, 1953. v. 56, p. 55-58.

Contains a summary of the development of Giant Yellowknife Gold Mines, Ltd., west side of Yellowknife Bay, Great Slave Lake, from Sept. 1934 to 1952. The history of the company, its drilling and construction programs and financing are described. Transportation to and from the area, and the plant itself, its surface buildings and mine shafts, power supply, operation, and operating costs are discussed.

31327. PLAKIDA, M. È. Ostoi sudov pod zashchitoi ledianoi damby (Rechnol transport, Sept.-Oct. 1950. t. 10, no. 5, p. 19, diagsr.) *Title tr.*: Wintering of vessels protected by an ice dam.

On the low bank of one of the northern rivers, an ice dam is built each winter to

protect vessels in harbor against floating ice during the spring flood. The dam, 80-110 m. long, 10.5 m. high, its width 20 m. (at base) to 17 m. (top), is built at an angle of 80-85° to the shore line. The experiment is regarded as successful. Formulae are given for estimating the stability of the dam in flood, (involving buoyancy of the ice, force of its freezing to the bottom, and weight of its structure, at least one m. above flood level). Data are supplied on construction cost.

Contains a note on measurements of skin temperatures of frostbitten limbs as related to internal temperature and that of the armpit. An increased temperature was found in the injured area, which returns to normal upon recovery.

Copy seen: DSG.

31329. PLATNER, W. S., and M. J. HOSKO. Mobility of serum magnesium in hypothermia. (American journal of physiology, Aug. 1953. v. 174, no. 2, p. 273-76, illus., tables) 14 refs.

Contains a study of the increase of serum magnesium during hypothermia in the hamster, turtle, rat, cat and adult dogs and puppies. The rate of increase of serum magnesium was greatest in the turtle, followed (in descending order) by those in the dog (puppies), hamster, rat, cat, dog (adult). In turtles exposed to cold for 15-17 days serum Mg. fell by ten percent; in one third of the animals, by nearly 60 percent.

31330. PLATON, Archimandrite (PIOTR IVANOVICH LĬUBARSKĬI, d. 1811. Kurze Beschreibung der Wogulischen, einer im Tscherdünschen Kreise der Statthalterschaft Perm nomadisierenden Völkerschaft. (Journal von Russland, Bd. 2, no. 8, Feb. 1794, p. 119-28; no. 10, Apr. 1794. p. 264-77) The paper is stated to have been first published in Tumanski's Russian Magazine, Sept. 1793. *Title tr.*: Short description of the Voguls, a nomadic people in the District of Cherdyn, Government of Perm.

Contains a detailed description of localities where the Voguls nomadize, their communal hunting practices, tents and contents, elevated storage rooms, abandon-

donment of the tent in case of death in the family. Historical information is given on wars and trade between Russians and Voguls. The Vogulian calendar, with the new year beginning in November is noted also, winter as the principal hunting season and summer a resting time, chiefly because of mosquitoes. Settlements of Voguls (inhabited places and number of persons) are given, with sketch of their social organization, physical appearance and abilities (they excell in running and use of the bow), their food and clothing, beverages (beer, *braga* and *vodka*), customs connected with naming of children, marriage and burial, their religious beliefs, idols and sacrifices, morals and conversion to Christianity (in 1757). The author, an abbot in Moscow, derived his information from priests working among the Voguls.

31332. PLAVIL'SHCHIKOV, NIKOLAI NIKOLAEVICH. Nasekomye zhestkokrylye, t. 21-22. Zhuki-drovoseki, ch. 1-2. Moskva-Leningrad, Izd-vo Akad. nauk SSSR, 1936-40. 2 v. v. 1: xi, 612 p. illus. (247 fig.); v. 2: xiv, 785 p., illus. (382 fig.). (*In:* Fauna SSSR. Insecta Coleoptera, t. 21-22. (Nov. ser. no. 7,

22)) **Title tr.:** Beetles (Coleoptera) Cerambycidae, pts. 1-2.

Contains (in v. 21) a systematic index to phytophagous beetles of the fam. Cerambycidae (subfam. Prioninae and Cerambycinae, groups Disteniites and Lepturites), followed by an introductory part (p. 1-46) giving a morphological sketch of cerambycids, their metamorphosis, mode of life, geographic distribution, economic importance (injurious to trees, timber, wooden houses and some herbaceous plants), and their systematics. In the special part are keys to the subfamilies, tribes, genera and species; descriptions of 218 species and 12 subspecies and varieties (including 16 new species and three new subspecies), with critical notes and data on variation, geographic distribution and ecology. In v. 22, 265 (including ten new) species and 11 species of cerambycids (subfam. Cerambycinae, group Cerambycites) are treated similarly. This study is to be continued in v. 23. Some species (mostly in v. 21) are native to northern regions of the U.S.S.R. and other countries. Summaries in English, p. 479-595 (in v. 21) and p. 614-770 (v. 22).

31333. PLECH, R. Behandlung der Erfrierungen. (Medizinische Klinik, Apr. 30, 1943. Jahrg. 39, Nr. 17-18, p. 351-52) **Title tr.:** Treatment of frostbite.

Contains a report on the therapy of 76 cases of frostbite, of the first to third degree. In addition to "dry" therapy with powders, including sulphur powder, suction through application of negative air pressure to whole limbs was applied. Wet treatment (physiological salt solution, glucose solution, etc.) and ointments were also applied topically, alternatingly with dry treatment in cases of ulcerating lesions.

Contains the results of the author's three years' (1931-33) observations on the hunting and fishing methods of the Russian and native (Nentsy, i. e. Samoyed) population of Kolguyev Island (69°05' N. 49°15' E.) in Barents Sea. Social and economic conditions in pre-revolutionary and Soviet periods are sketched. The marine game animals (seals, walruses, etc.), methods of hunting them and preparation of their skins are described, as is fox hunting, especially the polar fox, its biology, various hunting and trapping methods and equipment. Birds and fishes of commercial importance in the area are noted. A more rational utilization of the rich resources of Kolguyev Island is recommended with a view to improving the social and economic conditions prevailing there.

(Rybnoe khozâistvo, Sept. 1948. t. 24, no. 9, p. 41-43, table) **Title tr.:** Are the Siberian rivers and seas suitable for the introduction of dog salmon (keta)? Siberian section of the All-Union Institute for Lake and River Fisheries.

Contains criticism of P. L. Pirozhnikov's views recommending the introduction of dog salmon (*Oncorhynchus keta*) into the Lena (Aldan) and Yenisey River basins and the Siberian seas. Differences between natural conditions of the arctic seas and Siberian rivers and those of Far Eastern seas and rivers, where the dog salmon breeds, are considered, and doubts expressed on the feasibility of transferring the fish. Temperature and salinity data for Okhotsk, Kara and Laptev Seas to the depth of 100 m. are given in table (p. 42). The failure of

attempts to introduce Pacific salmon in America is mentioned.

Popular description of Greenland: its general geographic features, climate, history of its discovery, and of European settlements there; the rule of Denmark, growth of American influence; critical remarks on Danish-American cultural and economic policy in relations with Eskimos, etc.

Copy seen: DLC.

31348. POKORNY, JULIUS, 1887- Beiträge zur ältesten Geschichte Irlands. 1. Die *Fir Bolg*, die Urbevölkerung Irlands; 2. der *gae bolgae* und die nördliche, nicht-iberische Urbevölkerung der Britischen Inseln. (Zeitschrift für celtische Philologie, 1917, Bd. 11, p. 189-204; 1918, Bd. 12, p. 195-231) **Title tr.:** Contributions to the oldest history of Ireland. 1. The *Fir Bolg*, the oldest inhabitants of Ireland; 2. The *gae bolgae* and the old northern non-Iberian inhabitants of the British Isles.

Contains linguistic study in explanation of some controversial terms. The second part deals with *gae bolgae*, often mentioned in Irish literature; it means a harpoon with a bladder and shaft, probably borrowed from the Eskimos, not later than the second century A. D.; the

skin boat, mentioned around 500 A. D., is also a borrowing from the Eskimos. Archeological and anthropological investigations show that the British Isles were inhabited in paleolithic time by a Mongoloid dolichocephalic race (Eskimos, not Lapps) who came from Greenland or northeastern North America before the coming of the Celts. The mound dwellings and steam bathhouses, the institution of druids, the legends about the dwarfs living in the fairy mounds might also be the reminiscent of the small Eskimo race.

31358. POLAR RECORD. British Spitsbergen Expedition, 1952. (Polar record, July 1953. v. 6, no. 46, p. 804-805)

Contains summarized note on geologic work and surveying (for a 1:20,000 scale map) done east of Isfjorden, Vestspitsbergen, July-Aug. 1952, by a party of eight (listed) led by G. A. Sutton.

Copy seen: CaMAI; DLC.

31359. POLAR RECORD. C. Blair's trans-Arctic flight, 1951. (Polar record, July 1952. v. 6, no. 44, p. 531)

Contains brief note on a flight by Capt. Charles Blair of Pan American Airways on May 29, 1951, from Bardufoss Airfield, northern Norway, northward along 20° E. long. to the North Pole, southward along 160° W. long. to lat. 70° N. and southeast to Fairbanks, Alaska. Summarized from information in *The Times* (London), May 30 and 31, 1951.

Copy seen: CaMAI; DLC.

31360. POLAR RECORD. Canadian Eastern Arctic Patrols, 1947-50. (Polar record, July 1952. v. 6, no. 44, p. 515-17)

Contains a summary of calls made and work done by the Patrol in the Canadian Arctic east of approx. 95° W. long., each summer, 1947 through 1950. Posts supplied, vessels, their officers, sailing dates, etc., are indicated. Administrative and medical activities are noted and comment made on condition of the Eskimos in some of the areas visited.

Copy seen: CaMAI; DLC.

31361. POLAR RECORD. Canadian Snow Survey, 1947-50. (Polar record, Jan. 1953. v. 6, no. 45, p. 673)

Contains summary of report by D. C. Pearce and L. W. Gold (*Arctic Bibliography*, No. 25010) on a study of physical characteristics of the snow cover in Canada. Instruments ("Canadian snow kit"), stations and scope of observations are noted. **Copy seen:** CaMAI; DLC.

31362. POLAR RECORD. The "Cattalo." (Polar record, July 1953. v. 6, no. 46, p. 814-15, plate)

The cattalo is a range beef animal, the

result of cross-breeding the American buffalo (bison) with domestic beef cattle. The experiment, being carried out since 1915 at Manyberries, Alberta, by the Canadian Dept. of Agriculture, is intended to produce a good beef animal capable of withstanding severe winter climate and summer fly infestations. At present the cattalo form "does not . . . compare favourably with that of improved domestic breeds." The herd numbered 212 in 1949.

Copy seen: CaMAI; DLC.

31363. POLAR RECORD. The coldest place on earth. (Polar record, July 1953. v. 6, no. 46, p. 821-22) 6 refs.

Contains a brief discussion of air temperature at Verkhoyansk on the Yana River, and Oymyakon on the Indigirka, in Yakutia, as noted by several Russian scientists; with conclusion that Oymyakon has evidently replaced Verkhoyansk as the "cold pole." Lowest recorded air temperatures for North America (Snag in Yukon Territory) and Antarctica are cited.

31368. POLAR RECORD. French expedition to Greenland, 1950. (Polar record, July 1953. v. 6, no. 46, p. 792-794)

The travel, supply and scientific work of the Apr.-Oct. expedition led by P.-É. Victor, are summarized, with list of personnel, indicating members of wintering party. *Copy seen:* CaMAI; DLC.

31369. POLAR RECORD. French expedition to Spitsbergen 1950. (Polar record, Jan. 1953. v. 6, no. 45, p. 645-646)

Contains a summary (from *Alpinisme polaire: l'expédition Maillard au Spitsberg* by Bernard Cabanes, 1951, q. v.) of the personnel and objectives of a six-man party: to climb "Mont Général-Perrier" and to determine its elevation, believed to be slightly higher than that of the neighboring Newtontoppen, held to be the highest peak on West Spitsbergen (1717 m.). Due to failure of the barometer, the altitude of "Mont Général-Perrier" was not established.

Copy seen: CaMAI; DLC.

31370. POLAR RECORD. German attacks on shipping along the Northern Sea Route, 1942-44. (Polar record, July 1953. v. 6, no. 46, p. 822-26, map)

Contains a chronological account of German naval and air activities in the Barents and Kara Seas during the ice-free seasons of 1942, 1943, and 1944. Cruiser and U-boat operations (together with ice and weather reconnaissance) in

harassment of Russian merchantmen and lend-lease shipping west of Murmansk and Arkhangel'sk are noted, and German claims of sinkings indicated. Map shows areas described.

Copy seen: CaMAI; DLC.

31371. POLAR RECORD. Glaciological work on Grinnell Glacier, Baffin Island, 1952. (Polar record, July 1953. v. 6, no. 46, p. 805)

Contains note of work done by John Mercer and Weston Blake, July 16-Aug. 22. The maximum height of the icecap (62°35' N. 66°55' W.) and névé line were determined and shrinkage and advances of parts of the ice cap noted.

Copy seen: CaMAI; DLC.

31372. POLAR RECORD. Henning Jakob Henrik Lund. (Polar record, July 1953. v. 6, no. 46, p. 840)

Contains a brief outline of the events in the life 1875-1948, of the national poet of Greenland, where he was known as Intal' Éraq. His formative influences and types of poetry are noted.

Copy seen: CaMAI; DLC.

31373. POLAR RECORD. "Ice islands" in the Arctic Ocean. (Polar record, Jan. 1953. v. 6, no. 45, p. 684-687, map)

Contains a summary account of the discovery of the "ice islands" T_1 - T_5 ; their course; characteristics distinguishing them from pack ice; their size and shape; their origin; location of additional, smaller "ice islands"; landing of a party on T_3 , then (Mar. 19, 1952) 100 miles from the North Pole; flight to the Pole from T_3 (May 3, 1952) observations on T_3 by the original party (Mar.-May) and by a succeeding one (summer 1952).

Copy seen: CaMAI; DLC.

31374. POLAR RECORD. Ice reconnaissance flights over Hudson Bay, 1948-50. (Polar record, Jan. 1953. v. 6, no. 45, p. 643-44)

Contains a summary of several reports on a study suggested by indications that Hudson Bay freezes in winter and its marine climatic influence disappears in December. Reconnaissance flights made in the spring of 1948 and 1949 by Royal Canadian Air Force confirmed the existence of a continuous ice cover on the Bay with extensive pressure ridges and a few narrow leads. Regular flights were made during the winter of 1949-50: as from Nov. 22, an increasingly large area was

found frozen, and early in January the Bay was completely covered with ice except the usual few lanes and shore leads, the latter also tending to disappear in March.

Copy seen: CaMAI; DLC.

31375. POLAR RECORD. Ice shelf terminology. (Polar record, July 1953. v. 6, no. 46, p. 838)

Contains a ruling by the Antarctic Place-Names Committee, May 15, 1953. The terminology for formations variously called "ice barrier" and "ice shelf" is clarified, and several place names in Antarctica and the Falkland Island Dependencies officially accepted.

Copy seen: CaMAI; DLC.

31376. POLAR RECORD. Influenza virus epidemic at Victoria Island, Northwest Territories, 1949. (Polar record, Jan. 1953. v. 6, no. 45, p. 680-81)

Contains a note regarding an outbreak (Mar.-Apr. 1949) affecting the entire native population of Victoria and adjacent islands, with a death toll of 18; the white population numbering about 50 was hardly affected; the causative agent was most probably virus A.

Copy seen: CaMAI; DLC.

31377. POLAR RECORD. International ice observation and ice patrol service in the North Atlantic Ocean, 1946-50. (Polar record, July 1953. v. 6, no. 46, p. 817-21)

Contains a chronological summary of ice patrol activities. Includes names of ships and commanding officers of the patrol, types of aircraft used, and services rendered. In addition to oceanographic work an "iceberg census" was carried out in 1948 and 1949 in Baffin Bay and Davis Strait.

Copy seen: CaMAI; DLC.

31378. POLAR RECORD. Joint Canadian-United States meteorological stations in the Canadian Arctic, 1949-1951. (Polar record, July 1952. v. 6, no. 44, p. 518-20, text map)

Contains note on the establishment of weather station at Alert on northern Ellesmere Island in Apr. 1950, and the supplying of stations at Resolute, Mould Bay, Isachsen, and Eureka, on Cornwallis, Prince Patrick, Isachsen, and Ellesmere Islands respectively. The meteorological program and other scientific observations are described. Annual mean, highest and lowest recorded tem-

peratures, mean annual precipitation, and geographic coordinates of the stations are given.

Copy seen: CaMAI; DLC.

31379. POLAR RECORD. Juneau Ice Field Research Project, 1950 and 1951. (Polar record, July 1952. v. 6, no. 44. p. 524-26, illus.)

Contains a summary of work done by an American Geographical Society expedition of 29 men, June 15-Oct. 5, 1950; eight men, Jan.-Feb. 1951; and 16 men, May-Sept. 1951. The parties were led by M. M. Miller and received support from the U. S. Office of Naval Research and U. S. Forest Service. The research and main glaciological stations were on upper Taku Glacier, with 16 subsidiary stations scattered over the Ice Field. Glaciological, geological, meteorological, ecological, chemical, and surveying work was carried on. Equipment is described and party members and duties listed.

Copy seen: CaMAI; DLC.

31380. POLAR RECORD. The Kara Sea route, 1945-52. (Polar record, July 1953. v. 6, no. 46, p. 826-29, 2 tables)

Contains a note "summarized from information in *Lloyd's list and shipping gazette*, 1945-52, *passim*, in official logs, agreements and chief officers' logs provided by the shipping companies; and from information supplied by the Timber Branch of the National Coal Board, the Registrar General of Shipping & Seamen, and the Shipping Editor of *Lloyds*."

A large proportion of the Siberian timber export from Igarka, the lower Yenisey River port, goes to foreign countries. The navigational procedure of foreign ships sailing to Igarka is noted. Tables show "timber exports from the Kara Sea to non-Russian countries, 1935-52," and "timber exports since 1945 from Igarka to countries outside the U.S.S.R."

Copy seen: CaMAI; DLC.

31381. POLAR RECORD. Loss of five Norwegian sealing vessels, 1952. (Polar record, July 1953. v. 6, no. 46, p. 821)

The *Pels*, *Buskøy*, *Brattind*, *Ringsel*, and *Vårglint* were reported missing in April 1952 in the Greenland Sea northwest of Jan Mayen. No survivors were found.

Copy seen: CaMAI; DLC.

31382. POLAR RECORD. Mineral industry of District of Mackenzie, Northwest Territories. (Polar record, July 1953. v. 6, no. 46, p. 811-14, plate)

Norman Wells and Great Slave-Great Bear Lakes areas are the main centers of prospecting and production. Mineral resources include gold (93 percent of production value, 1949), silver, uranium, scheelite, copper, lead, and zinc. Oil fields developed in the now-abandoned Canol Project meet present needs of the region. High costs of mining and difficulties in transportation are major obstacles. Transport is mainly by water, with some air traffic. Diesel fuel from Norman Wells and hydroelectricity provide power for mining operations.

Copy seen: CaMAI; DLC.

31383. POLAR RECORD. Norwegian Lapp Society. (Polar record, Jan. 1953. v. 6, no. 45, p. 674-75)

Contains note from information supplied by A. Nesheim, on the reorganization of a local society in Oslo to a national scale in 1950. Known as Sámiid Saer'vi (Lapp) or Sámisk Selskap (Norwegian), the society has as its aim the dissemination of information on behalf of the Lapps and the improvement of their standards of education. It is intended to publish a yearbook. **Copy seen:** CaMAI; DLC.

31384. POLAR RECORD. Norwegian Mountaineering Expedition to East Greenland, 1951. (Polar record, July 1953. v. 6, no. 46, p. 803)

A party of three made glaciological observations and collected botanical and geological specimens in Aug. and early Sept. 1951.

Copy seen: CaMAI; DLC.

31385. POLAR RECORD. Oil in northern Alaska. (Polar record, July 1953. v. 6, no. 46, p. 815-16)

At the end of World War II, intensive drilling and exploration began in U. S. Navy Petroleum Reservation no. 4. The provision of heavy supplies and equipment has been a major problem. An oil field with an estimated capacity of 50-150 million barrels, was discovered at Umiat, 175 miles southwest of Pt. Barrow. Exploration will end in 1953.

Copy seen: CaMAI; DLC.

31386. POLAR RECORD. Poliomyelitis epidemics in the Canadian Eastern Arctic, 1948-49. (Polar record, Jan. 1953. v. 6, no. 45, p. 679-80)

Contains a summary of two polio epidemics: one, appearing in Churchill in July 1948 spread to Nunalla, Eskimo Point, Padlei and the Kazan River area,

affected some 500 natives, and ceased in March 1949; there were four deaths and 21 cases of paralysis. The other outbreak occurred at Chesterfield Inlet and lasted from Feb. 14 till Mar. 7th 1949; at least half of the native populace of 275 is believed to have been affected, with 14 dead and 39 paralyzed. Quarantine and medical measures, suspected ways of spread, etc., are noted.

Copy seen: CaMAI; DLC.

31387. POLAR RECORD. Post-war diplomatic exchanges between Norway and the U. S. S. R. concerning Svalbard. (Polar record, July 1953. v. 6, no. 46, p. 830-36)

Contains translations of notes and statements of the Norwegian and Soviet governments as published in *La Documentation Française. Notes et Études Documentaires* (Paris), *Série Internationale* 259, no. 1573, 1952; *Times Jan.* 15 and 18, 1947, Nov. 13, 1951; *Soviet News*, Oct. 19, 1951; *Press Bulletin* (Norway), Nov. 3 and Dec. 8, 1951. These document the Soviet Government suggestion in Jan. 1947, of joint Norwegian-Soviet fortification of Svalbard, though contrary to the 1920 Treaty of Spitsbergen. The Norwegian Government refused unless proper modification of the Treaty were made. In Oct. and Nov. 1951 the Soviet Government stated that Norway had violated the Treaty of Spitsbergen by joining the North Atlantic Pact. Norway in reply stated the demilitarized status of Svalbard to remain unchanged. **Copy seen:** CaMAI; DLC.

31388. POLAR RECORD. Project "Snow Cornice", 1950 and 1951. (Polar record, Jan. 1953. v. 6, no. 45, p. 646-48)

Contains a summary, from several reports, of brief visit by the leader in 1950, and of extensive work by a large party (personnel listed) in 1951. Investigations of 1948-49 on Seward were extended to Malaspina Glacier (59°52' N. 140°30' W.) and first ascents were made of Mt. Hubbard (14,950 ft.) and Mt. Alverstone (14,500 ft.) in the St. Elias Range. Both the field work and the climbing party were headed by Walter A. Wood of the Arctic Institute of North America. The study of the Malaspina Glacier included seismic and gravimetric measurements and observations on the rate of snow ablation, annual accumulation, density of the névé, etc. **Copy seen:** CaMAI; DLC.

31389. POLAR RECORD. Provst Christian Wilhelm Schultz-Lorentzen. (Polar record, July 1953. v. 6, no. 46, p. 840-41)

Contains a summary of his life, 1873-1951, and his educational and religious work in Greenland. His dictionary and grammar of the West Greenland Eskimo language (Arctic Bibliography, No. 15569 and 15574) are noted.

Copy seen: CaMAI; DLC.

31390. POLAR RECORD. Queen's University Expeditions to Southampton Island, 1949 and 1950. (Polar record, Jan. 1953. v. 6, no. 45, p. 645)

Contains summary of information supplied by Dr. M. Brown on three trips made to obtain clinical data on Eskimos: two in spring and midsummer 1949 to study the metabolism of fat and ascorbic acid, diet, peripheral blood circulation, etc. and on one in 1950 to continue studies on peripheral blood flow.

Copy seen: CaMAI; DLC.

31391. POLAR RECORD. Royal Navy survival tests in arctic waters, 1950. (Polar record, July 1952. v. 6, no. 44, p. 521)

Contains brief note on experiments carried out off northern Norway in Feb.-Mar. 1950, by eight Royal Navy volunteers, supervised by R. A. McCance, E. M. Glaser, and R. Luff. The experimental equipment and survival rations are listed.

Copy seen: CaMAI; DLC.

31392. POLAR RECORD. The sealing vessel *Theron*. (Polar record, July 1952. v. 6, no. 44, p. 543, plate)

Contains brief description of the dimensions, engine and equipment of the ship, which is designed for use in arctic waters and fitted with a laboratory. It was completed 1950, for Messrs. Christensen Canadian Enterprises Ltd., Montreal.

Copy seen: CaMAI; DLC.

31393. POLAR RECORD. Sherborne School visit to Spitsbergen, 1952. (Polar record, July 1953. v. 6, no. 46, p. 805)

Fifty pink-footed geese were ringed and some surveying done by G. T. Wright and five boys during Aug. 1952, from a base at the head of Tempelfjorden (southern Vestspitsbergen).

Copy seen: CaMAI; DLC.

31394. POLAR RECORD. The Soviet Arctic in the fifth Five-year Plan. (Polar record, July 1953. v. 6, no. 46, p. 829)

Contains a note summarized from Pravda, Aug. 20 and Oct. 10, 1952.

Economic development in the Plan includes work on a railway line along the Yenisey River, enlargement and reconstruction of the ports of Murmansk and Nar'yan-Mar (at the mouth of the Pechora), development of inland waterway port where the Vorkuta railway crosses the Pechora, improvement of transport on Siberian rivers, further development of trade along the Northern Sea Route and in the Lena basin, as well as provision of new ice-breakers for the merchant fleet.

Copy seen: CaMAI; DLC.

31395. POLAR RECORD. Studies of blood-sucking flies in northern Canada, 1947-51. (Polar record, Jan. 1953. v. 6, no. 45, p. 675-79)

Contains a review of the entomological and insecticidal work begun in 1947 on behest of the Canadian Dept. of National Defence and Dept. of Agriculture. The taxonomy, ecology, distribution and abundance of mosquitoes and blood-sucking flies have since been investigated in 38 arctic and subarctic localities ("Northern Insect Survey"). Insecticides and repellents were studied and evaluated (jointly with U. S. authorities) and are discussed in detail in this review, together with some biological, climatological and human aspects of the insect problem.

Copy seen: CaMAI; DLC.

31396. POLAR RECORD. U. S. Navy operation "Skijump I," 1951. (Polar record, Jan. 1953. v. 6, no. 45, p. 650-51)

Contains a summary from an unpublished report by J. F. Holmes and L. V. Worthington, of an oceanographic project carried out during Feb.-May 1951 in Beaufort Sea. Twelve aircraft landings were made without mishap on the pack-ice, 100 and 400 miles north from the Alaskan coast. Data were collected on the depth, temperature, salinity, currents, etc., of the water, and on the thickness of the pack ice.

Copy seen: CaMAI; DLC.

31397. POLAR RECORD. The use of compressed air to keep waterways ice free. (Polar record, Jan. 1953. v. 6, no. 45, p. 690-91)

Contains a description, based on papers by Bengt Persson (in: Tryckluft. Aktiebolaget Atlas Diesel, Stockholm, nr. 1-2, 1949). The installation, thoroughly tested and now used in inland waters of Sweden, consists of one or more pipes laid at the bottom of waterways; the up-

per side of the pipes has small holes at regular intervals; air pumped into the pipes rises through the holes to the surface and carries with it the warmer bottom water, thus preventing formation of surface ice. The limitations of the system are also discussed.

Copy seen: CaMAI; DLC.

31398. POLAR RECORD. Voyage round Cornwallis Island, Northwest Territories, 1950. (Polar record, July 1953. v. 6, no. 46, p. 794-96)

A geological survey of the coastal area was made by Y. O. Fortier, R. Thorsteinson, and T. A. Harwood, July 21-Aug. 22, traveling by freight canoe with outboard motor. Relics from a Franklin Search expedition, 1850-51, were found. A detailed geological survey was made of the area around Resolute, June 1-July 21. The island had been circumnavigated previously only by Franklin in 1845.

Copy seen: CaMAI; DLC.

31399. POLAR RECORD. Wreck of the British trawler *Norman*, 1952. (Polar record, July 1953. v. 6, no. 46, p. 821)

The wreck occurred on the southeast coast of Greenland near Kap Farvel, Oct. 4, 1952. One survivor was found in an extensive search.

31400. POLDUSHKIN, G. L. Aërofotos'emka na lesosplave. (Lesnāia promyshlennost', July 1950. t. 10, no. 7, p. 18-20, illus., 2 plates (1 inserted))

Title tr.: Aerial photography in logging.

An experiment in using aircraft to check the rafting and free log drive on the Vychegda River was successfully carried out by the Forest Aviation Trust in 1949. Extension of this work to Severnaya Dvina River was planned for 1951.

Copy seen: DLC.

31401. POLEVOI, P. I. Poleznye iskopaemye Kamchatskoĭ oblasti. (In his: Poleznye iskopaemye Dal'nego Vostoka, pub. as U.S.S.R. Geologicheskii komitet. Dal'nevostochnoe otdelenie. Materialy po geologii i poleznym iskopaemyim Dal'nego Vostoka, no. 27, 1923, p. 253-88, fold. col. map in pocket) 63 refs. **Title tr.:** Mineral deposits of Kamchatka Province.

Contains a general description of the area, with an historical sketch of its prospecting. Orography, geology and geomorphology are briefly reviewed. Detailed tabular data in a regional arrange-

ment (p. 266-81) are given on the mineral deposits which include gold, coal, graphite, sulfur, copper and lead-silver ores. Chukotsk Peninsula and the Commander Islands are included in the study. Map (at end of vol.) Kamchatka sheet, scale 1:4,200,000, shows localities of the deposits; it was compiled in 1923 by the author who headed a prospecting party that year.

31402. POLIĀNSKIĬ, IURĬI IVANO. VICH. Nekotorye novye i malo izvestnye paraziticheskie nematody iz kishchnika morskikh ryb. (Akademiā nauk SSSR. Zoologicheskii institut. Trudy, 1952. t. 12, p. 133-47, illus.) **Title tr.:** Some new and little known parasitic nematodes from the digestive tract of marine fishes.

Contains a discussion of the systematic position of nematode genera *Ascarophis* and *Capillospirura*, and descriptions of *Ascarophis morrhuae*, *A. arctica* n. sp., *A. filiformis* n. sp., and *Capillaria salvelini* n. sp. obtained in Barents Sea, parasitic in fishes. **Copy seen:** MH-Z.

31403. POLIĀNSKIĬ, IURĬI IVANO. VICH. Sezonnye izmeneniā chuvstvitel'nosti mnogoshchetinkovogo kol'chetsa *Spirorbis borealis* Daudin k temperature. (Akademiā nauk SSSR. Doklady, 1951. nov. seriā, t. 76, no. 5, p. 751-54) **Title tr.:** Seasonal fluctuation in the reaction of *Spirorbis borealis* to temperature.

Reaction of a marine worm, *Spirorbis borealis*, to low and high temperature, was studied on the eastern Murman coast (Barents Sea). It withstood the effects of low temperature much better in the winter than in the summer season (tables 1-3); but its hardness to high temperature was the same in both seasons. **Copy seen:** DLC; MH.

31404. POLIĀNSKIĬ, IURĬI IVANO. VICH. Sravnitel'noe izuchenie stolkosti mnogoshchetinkovykh kol'chetsov *Spirorbis borealis* Daudin i *Spirorbis spirillum* (L.) k nekotorym vneshnim faktoram. (Akademiā nauk SSSR. Doklady, 1950. nov. seriā, t. 73, no. 2, p. 389-92) **Title tr.:** A comparative study of the hardness of polychaetous worms, *Spiror-*

bis borealis Dac. *spirillum* (L.) to some outside environmental factors.

Contains an ecological study of the adaptation of two species of Barents Sea polychaetes to temperature fluctuation and to being out of the water. These two species, closely related systematically, but living in different ecological zones (littoral and sublittoral), showed quite different degrees of adaptation to environmental factors (tables 1-4).

Contains a study of 152 patients with injuries in the cervical, thoracic or lumbar portion of the spinal cord. The cold stimulus produced reflex activity from the distal end of the injured spinal cord; the effectiveness of the cold stimulus applied, was less than that of scratch or of multiple pinprick. An analysis of the muscle reflexes—or lack of such—in relation to regions injured, is presented.

31411. POLUNIN, NICHOLAS VLADIMIR, 1909–, and **C. R. EKLUND.** Notes on the food habits of waterfowl in the interior of Ungava Peninsula. (Canadian field-naturalist, July–Sept. 1953, v. 67, no. 3, p. 134–37) 3 refs.

Contains detailed analyses of the stomach contents of an Ungava Canada goose (*Branta canadensis interior*), an old-squaw (*Clangula hyemalis*), three other geese of the same subspecies, and a black duck (*Anas rubripes*), with conclusions on feeding habits. The birds were collected at Payne Lake (59°30' N. 74°30' W.) and Gregory (Octopus) Lake (58°29' N. 70°06' W.), in Northern Quebec, in July 1949. Aquatic plants, usually important food for waterfowl, are lacking in this area. The geese and black duck fed primarily on monocotyledonous plants growing in damp places; one-sixth to one-half of the stomach content was mineral matter. The old-squaw fed on animal matter. Field work and collections made during the Canadian Wildlife Service—U. S. Fish and Wildlife Service annual survey of Canadian waterfowl breeding grounds (of which this study was a part) are briefly noted.

31412. POLUNIN, NICHOLAS VLADIMIR, 1909–. Vascular plants from Mill Island, Hudson Strait. (Canadian field-naturalist, Nov.–Dec. 1952, v. 66, no. 6, p. 165–67, sketch map) refs.

Contains an annotated list of 28 species of plants collected July–Aug. 1951 by D. O'Bryan, and D. Rogers at Morrissey Harbour, Mill Island (63°59' N. 78° W.), Hudson Strait, probably the first such collection from this island. Brief notes on soil and permafrost are added. Six

phanerogams were also collected at Seahorse Point, the easternmost part of Southampton Island. Publications on the flora of Southampton, Mansel, Salisbury, and Akpatok Islands are listed.

Copy seen: DGS.

31413. POMERANTSEV, BORIS IVANOVICH, 1903–1939. Paukoobraznye, t. 4, vyp. 2. Iksodovye kleshchi (Ixodidae). Moskva–Leningrad, Izd-vo Akad. nauk SSSR, 1950. 224 p. illus. (638 fig.). (*In*: Fauna SSSR. Arachnidea, t. 4, vyp. 2 (Nov. ser, no. 41)) 68 refs. *Title tr.*: Arachnids. Ticks (Ixodidae).

Contains in the introduction (p. 7–32) a morphological study of the ticks of the fam. Ixodidae, inhabiting the U.S.S.R., and a bibliography (68 items). In the special part (p. 33–219) are keys to the genera and species (males and females); a systematic enumeration of 52 species and 15 subspecies (three new), with synonyms, descriptions and data on biology, geographic distribution, hosts (men, mammals, birds, reptiles), and on pathogenic importance. Some species native to northern regions of the U.S.S.R. are included in this work, a posthumous publication. *Copy seen:* DLC; MH-Z.

31414. POMERANTZ, MARTIN A. Trailing cosmic rays in Canada's north: 20 miles aloft over Hudson Bay, scientists find clues to origin of high-speed atomic particles that bombard earth. (National geographic magazine, Jan. 1953, v. 103, no. 1, p. 99–115, 15 illus., text map) 7 refs.

Contains popular account of the National Geographic Society—Bartol Research Foundation Cosmic Ray Expedition, 1949–1950, based at Churchill, Man. Balloons were sent up to make a count of numbers of cosmic rays penetrating the earth's magnetic field at high latitudes. Instruments and techniques are briefly discussed, and Churchill and surrounding countryside are described.

31415. POMERAT, GERARD ROLAND. Cell changes in the pituitary and ovary of the white rat following exposure to constant light or darkness. (Anatomical record, Apr. 25, 1942, v. 82, no. 4, p. 531–42, table) 24 refs.

Contains an account of experiments and histological observations which demonstrated that both continuous light or darkness cause a reduction in size of the ovary and in the amount of luteal tissue. Pituitaries of animals kept in continuous

light showed no significant quantitative or qualitative changes of their cellular elements; those from animals kept in darkness resembled pituitaries of young castrate females. **Copy seen:** DSG.

31416. POMUS, M. I. U Angarskikh porogov. (Nauka i zhizn', Jan. 1953. t. 20, no. 1, p. 33-35, illus.) **Title tr.:** At the Angara rapids.

The waters of 300 rivers flow into Lake Baykal, and its outlet, the Angara, carries them to the Yenisey. The Angara's speed reaches 15 km. per hour, and its hydrotechnical capacity amounts to 60 billion kw-h annually. The main features of the Angara and its basin are briefly described and their economic potentialities stressed.

31434. POPOV, ANDREI ALEKSANDROVICH. Poluchenie "shamanskogo dara" u Vilyŭŭskikh fakutov. (Akademiŭ nauk SSSR. Institut etnografii. Trudy, nov. seria, 1947. t. 2, p. 282-93) **Title tr.:** Receiving the "shamanistic gift" among the Yakuts of Vilyuysk.

Contains detailed description of how a person becomes a shaman among the northern Yakuts, based on material (several accounts cited) collected by the author in 1922-25 in the Udyugaysk ulus. The shaman (*oyun*) is mediator between men and gods or spirits. At birth, the future shaman is robbed by spirits of all of his souls, that of the air, the earth, and the mother-soul. For several years, each of his souls receives a special "education" from the spirits and "the old women of the North" (*severnnye starukhi*). Later the souls return to his body, and his quality as shaman depends on the kind of "education" which his souls obtained. Grown-up, the would-be shaman falls in a state

of great physical and mental weakness; he sees himself decapitated by spirits, his body rent into pieces (99 in all) and divided among spirits of the diseases which later he will be able to cure. Then his body is restored to him, the shamanistic costume laid on, and the drum given into his hands by the spirits, who teach him the words of incantations. The shaman receives also his protective spirits (a great shaman has 47 of them, a small one three at least). Among the shaman's accessories, three stone arrows and one small iron triangle are important. Shamans may be helpful or harmful, good or bad; they often struggle with each other by magic means. A shamaness is considered to be more powerful than her male brother. The most powerful shamans of both sexes are said to become pregnant and give birth three times: to a bird, a fish (pike) and to a mammal (bear or wolf) which run to the woods or water. The dead shaman may be reborn after many years with the help of a bird which he once bore. There are also less important shamans who get their vocation from *üör* or the soul of an unruly man, and become pupils of a real shaman; they have no shamanistic accessories, however, can shamanize three years only and are helpful only in small cases. Only one who had great shamans among his ancestors can become a true shaman.

Popular account of the activities of the pioneer arctic agriculture academician, Iogann Gansovich Elkhfel'd: his first horticultural experiments in Khibina tundra in 1923, foundation of a polar station for agriculture, search for new methods of plant breeding under arctic conditions; establishment of the 1500-hectare (3,700-acre) state farm "Industriia" in the neighborhood of Kirovsk in 1930; its success: with meadows, cultivated land and hot houses (10,000 sq. m. under glass) and a thousand horses and cows. Selection of soil (peat), its fertilization, selection and cross-breeding of plants, etc., are briefly noted. Damage to the Khibina experiment station from

German air-raids during the war are mentioned. **Copy seen:** DLC.

Edible plants of the Arctic. (Arctic,

Mar. 1953. v. 6, no. 1, p. 15-34, illus.) 20 refs.

Contains an introductory discussion of the vitamin value, use and storage of plant food by the Eskimos, Chukcheis and white men; preferences in plants or their parts used for consumption; preparation of plant foods. Then follows an account (with illus.) of some 40 species of edible plants of the Arctic, including lichens, mushrooms, and seaweeds, whose fruit and berries, roots, tubers, leaves, etc. are eaten, used as potherbs, or for preparation of beverages, "pickles," etc. Descriptions of the individual plants are followed by notes on their distribution, localities where usually found, parts eaten, way of preparation, etc. Poisonous plants of the northern forest are noted and figured (p. 17, 32). This paper was originally prepared for Dr. Vilhjalmur Stefansson's *Encyclopedia arctica*. **Copy seen:** CaMAI; DLC.

31462. PORSILD, ALF ERLING, 1901- . Land use in the Arctic. (*In:* Alaskan Science Conference . . . 1951. Proceedings, pub. 1953, p. 75-80) 8 refs.

The direct and indirect importance of plants in the economy of arctic man, and the practices of land cultivation, gardening, and plant and animal husbandry are briefly discussed. Large-scale breeding and domestication of reindeer, caribou, and musk-oxen in Alaska, Canada, and the U.S.S.R. is judged impractical. Careful administration of remaining wildlife in the arctic and subarctic tundra and taiga is considered the most practical approach to the support of the sparse human population of these areas.

The poor health service in this district is noted and, as a consequence the perpetuation among the rural population of magic cures and traditional medicaments. Author spent three weeks of Aug. 1925 in Russian villages of the Kolarovskiy district and collected considerable material on local practices. Various healing herbs, popular medicaments and their use are described. The material is presented according to diseases, some 50 are named. The types of "medicine-men" and their activities are sketched. *Copy seen:* DLC.

31483. PRIKLONSKIĬ, VASILĬ L'VO-VICH, 1851 (or 2)-1899. Materialy po étnografii iakutov iakutskoi oblasti. (Vsesoiuznoe geograficheskoe obshchestvo. Vostochno-sibirskii otdel. Izvestiia, 1887, pub. 1888. t. 18, p. 1-43) *Title tr.:* Materials for the ethnography of the Yakuts in the province of Yakutia.

Contains description of Yakut daily life, traditions and material culture: Yakuts' work and mood in spring-time, the making of kumiss and kumiss festivals, running and fighting contests, spring songs, legends on Yakut origin and migration. The winter and summer dwellings are described, and account given of the life of fisher Yakuts, native dishes and hospitality, boats, men and women's clothing, riding equipment, harness, sleeping bags, etc. *Copy seen:* DGS.

31484. PRIKLONSKIĬ, VASILĬ L'VO-VICH, 1851 (or 2)-1899. Das Scha-

manentum der Jakuten; nach dem Russischen des V. L. Priklonskij von Friedrich S. Krauss. (Anthropologische Gesellschaft, Wien. Mitteilungen, 1888. Bd. 18, p. 165-82) **Title tr.:** Yakut shamanism; from V. L. Priklonskij's Russian [original] by F. S. Krauss.

The Russian original was published in Vsesoiuznoe geograficheskoe obshchestvo. Vostochno - Sibirskij otdel. Izvestiia, 1886. t. 17, vyp. 1-2.

Monograph based on Priklonskij's field observations, material supplied by his Siberian correspondents (especially a teacher named Pripuzov), and the literature. Raw materials are given, and Priklonskij's consideration of the development of Yakutian shamanism from viewpoint of cultural history. The following topics are treated: the *meryak* (a kind of hysteria, especially among women), shaman's initiation and oath, names of demons and their origin, shamanistic healing performances and the mental state of a shaman in action, the professional gains of a shaman, the shamaness, shamans' burial places, etc. The old shamanistic religious conceptions: good and bad spirits, three worlds and seven heavens, soul beliefs, burial customs, beliefs on thunder and lightning are discussed. Text of an oath, and a legend on the creation of the earth are given.

Copy seen: DSI-M.

31485. PRIKLONSKIĬ, VASILĬ L'VOVICH 1851 (or 2)-1899. Totengebräuche der Jakuten; nach der russischen Originalhandschrift, von Friedr. S. Krauss. (Globus, 1891. Bd. 59, nr. 6, p. 81-85, 6 illus.) **Title tr.:** The funeral customs of the Yakuts; by F. S. Krauss, based on [Priklonskij's] original manuscript in Russian.

Contains first-hand material on the treatment of diseases, the sick and the dead among the Yakuts, their shamanistic practices, and forms of burial ancient and modern (drawings show the Yakut graves). The observations were made by Priklonskij, a high Russian official in eastern Siberia, who traveled for several months each year over the region between Yakutsk and the mouths of the Lena and Yana Rivers. The Yakuts consider diseases as either slight, i. e. those which can be healed by popular medicaments; or serious and chronic, those caused by demons who take possession of a man's soul, and for which aid can be rendered only by a shaman

(*oiun*). Description of a typical shamanistic performance is given. The Yakuts' panicky fear of the dead is noted and the abandonment of the sick by their relatives. Professional "undertakers" (*kiuvers*) are hired to bury a corpse. Burial forms are described: platform burial as formerly used, the surface, and earth burial forms of more recent date; the survivors' purification after funerals by leaping over fire; a wooden dummy made to represent the deceased, placed in the cattle shed and fed.

In spring 1944, an exceptional mass migration of the sturgeon (*Acipenser baeri* Brandt) which breeds in Obskaya Bay, was observed, and an extraordinarily rich catch was made. The phenomenon is explained by an abnormal amount and a peculiar distribution of the oxygen-less Ob' River winter water in the Bay that year, which forced the fish to migrate into the Poyute. The latter is a small stream flowing from the eastern slopes of Yamal into Obskaya Bay 40 km. north of Novyy Port. Its lower part is described and data are given on the condition of the fish caught.

31488. PROEKT I STANDART. OST na ustroistvo osnovaniia i fundamentov v raionakh vechno merzloty; vzamen OST 4544 v redaktsii 1923 g.; proekt. (Proekt i standart, 1937. t. 6, vyp. 1, p. 37-40, tables) **Title tr.:** OST [All-Union Standard] for the layout of foundations in permafrost regions; replacing OST 4544 edited in 1932; plan.

"Construction properties of soils and maximum loading on permafrost for different temperature and moisture conditions are listed. The force necessary to separate wood and concrete from soil at below freezing temperatures (adfreezing strength) for different soil moisture conditions are given. The adfreezing strength for wood at -1° C. varies from 2-6 kg./sq. cm. and for concrete 1-5 kg./sq. cm. for soil ranging from 25-100 percent saturation; at -10° C. the value varies from 3-16 kg./sq. cm. for wood and 7-13 kg./sq. cm. for concrete over the same moisture range. Intermediate data are obtained by interpolation. Engineering and geological investigations of construction sites with varying thickness of the active layer, and basic principles of construction techniques are proposed."—SIPRE. **Copy seen:** DLC:

31489. PROKOF'EV, G. N. Ėnetskil (enisetsko-samoedskii) dialekt. (In: Ėzyk i pis'mennost' narodov Severa. 1937. chast' 1, p. 75-90) 2 refs. **Title tr.:** The Ėntsý (Yenisey-Samoyed) dialect.

Contains phonetics and morphology of a small Samoyedic tribe (378 in 1926), nomadizing on the right bank of the Yenisey from near Dudinka to Golchikha. They consist of three sibs and are blood relatives of Nganasans (Tawgis).

Copy seen: NNC,

31490. PROKOF'EV, G. N. Materialien zur Erforschung der Ostjak-Samojedischen Sprache; die Tasovsche Mundart. (Ungarische Jahrbücher, 1931. Bd. 11, Heft 1-2, p. 91-98, Heft 3, p. 293-97, Heft 4, p. 440-52, tables) **Title tr.:**

Contribution to the investigation of the Ostyak-Samoyed language; the dialect of Taz.

Contains grammatical essays: declension, pronominal suffixes, independent pronouns, and verbal forms. Based on material collected by the author who spent three years (1925-28) in the Taz River region, making ethnological and linguistic studies, and teaching at an Ostyak-Samoyed school. Many references are made to the Samoyedic grammar and vocabulary of Castrén.

Copy seen: DLC.

31491. PROKOF'EV, G. N. Nenetskil (ŭrako-samoedskii) ŭzyk. (In: Ėzyk i pis'mennost' narodov Severa, 1937. chast' 1, p. 5-52) 25 refs. **Title tr.:** The Nenets (Yurak-Samoyed) language.

Contains an introduction on the number (15,000), living places and names of the Yurak people; their native geographical names; general character of their language, its dialects; history of research on the Samoyedic language; and new trends in language development: the Latinized alphabet since 1932, new terminology, etc. A sketch of Yurak literature is presented: the old property marks (*tamgi*) used in place of signature by illiterates; 18 school books, popular reading books, and two papers published in the short period of the "northern alphabet" (1932-35). A grammar follows: phonetics, morphology and syntax, and notes on vocabulary (no glossary). The Yuraks are the most numerous Samoyedic group living from the eastern shores of the White Sea to the lower Yenisey, including territories of Yamal, Taymyr and Kanin Peninsulas, the Timanskaya and Bol'shezemel'skaya Tundras, also the islands of Kolguyev, Vaygach, and Novaya Zemlya.

Contains a short grammar and general notes on this nomadic people; their number (807 in 1926) and territory (east of Yenisey, between the Pyasina and Khata-tanga Rivers) with an administrative center at Dudinka. The region has a mixed population of which the Tawgis are a minority. Two sibs and two dialects of Tawgis are known: *nŭ* and

asīa. The grammar outlined here represents the first dialect.

Copy seen: NNC.

Contains a sketch of phonetics, morphology, syntax and lexical notes to the language of the second largest Samoyedic group (4355 persons in 1926). They are hunters and fishers, living in a territory between the rivers Taz and Ket, also on the Tym and Narym. A characterization of their language and its three dialects, those of Ket, Tym and Taz, is given. Five school books were published in 1932-34 in the new Latinized Sel'kup alphabet, introduced in 1931.

Contains description of life in a village (ulus) of 4,000 inhabitants, all of them animal-breeding Yakuts, among whom the author worked as physician. He describes the exterior conditions, those indoors, and living habits: climate (-40° R. in winter to $+28^{\circ}$ R. in summer), clothing and food, hygienic conditions (underclothing never changed), psychological characteristics (the Asiatic inclination to feuds, love of tobacco and alcohol), the economy (breeding of horses and cattle, fishing). Diseases are attributed by the author to poor drinking water, and little care for the sick is noted, greater concern being evinced for well-being of the livestock than for health of the family. Leprosy is common, and each of 14 villages in the region had some persons so stricken.

19-22, illus.) *Title tr.:* Types of outer coats of the Siberian peoples.

Contains an attempt at classification of outer garments for men and women in two principal groups: (1) "pull-over" coats with a head opening only, of which three types, used by the Chukchis, Koryaks, Samoyeds, and Eskimos, are described; and (2) coats with a full-length front opening. Seven types of the latter are described, and their use attributed to (among others) the Tungus, Dolgans, Yakuts, Ostyak Samoyeds, Yeniseians, Yukaghirs, Ostyaks and Voguls. These are the customary or everyday clothes. There are also special garments for professional use, traveling, festivals and cult. Until the 17-18th century, many of the Siberian peoples had no knowledge of any kind of underclothing and their body covering consisted of a single garment only.

plates. (Harmondsworth, Eng. Road Research Laboratory. Road research technical paper no. 19)

"The paper is a report of present practices and of research on snow fences done in America, Scandinavia, and Germany. Leading fences are designed to lead snow to hollows in the ground. Leading fences are used in Norway where snow-bearing winds vary little in direction. Collecting fences deposit snow on the ground by slowing the wind before the wind reaches the road. Collecting fences are located on the windward side of the road, parallel to the road, with sections staggered at an angle to the road, or wing staggered on both sides of the road. The direction of the wind and of the road govern the arrangement of the fences. The research of Finney and Nøkkentved on wind tunnel model fences is reported. Each type of fence produces a characteristic eddy area in which snow is deposited. Eddy area depends on wind speed, height and construction of the fence. An open fence, 50 percent covered with slats, gives optimum eddy area. Clogging is prevented by elevating the fence six in. from the ground."—SIPRE. A fragmentary survey of the main events of Russian domination in Kamchatka from the foundation of Petropavlovsk by V. Bering in 1740. The town is described: its site, gradual growth and changes in conditions of life there. Political events in Petropavlovsk and Kamchatka in the last century are stressed: the defense of Petropavlovsk in Crimean

War, its fate in Russo-Japanese war, its importance as a base for Russian control of the Chukotsk Peninsula and Vrangeli Island (p. 110-18); economic expansion in 1913-16, the impact of the Russian Revolution 1917, brief rule of the Bolsheviks in 1918, the attempts to organize self-administration and the final victory of Bolsheviks in 1922.

31505. PUTNAM, DONALD FULTON, 1903-, and others. Canadian regions: a geography of Canada. New York, Thomas Y. Crowell, 1952. 601 p. illus. maps, diagrs., tables. *Other authors:* B. Brouillette, D. P. Kerr, and J. L. Robinson.

Contains a geographical description in which the country is divided into eight main regions, Newfoundland-Labrador (p. 42-70), the Maritime Provinces, Quebec, southern Ontario, northern Ontario (p. 318-39), the Prairie Provinces, British Columbia, and the Canadian Northland (p. 480-508). These are described in turn, in most cases separate chapters being devoted to physical background, human geography, economic geography, and regions and cities of each main region. An introductory chapter deals with the physical background of the country as a whole, and concluding chapters concern Canadian production, commercial activity, and problems and trends in national development.

The Canadian Northland is divided into two parts on the basis of differences of climate, topography, vegetation, people, and resources. The Northwest con-

sists of the Mackenzie valley and the Yukon, excluding the arctic coast, while the Arctic includes the mainland north of the tree-line and the arctic islands, and is further subdivided into the eastern Arctic, western Arctic, and far northern arctic islands (north of McClure Strait-Lancaster Sound), recently named: Queen Elizabeth Islands. *Copy seen:* DLC.

31512. QVIGSTAD, JUST KNUD, 1853- . Lappische Opfersteine und heilige Berge in Norwegen. (Oslo. Universitet. Etnografiske museum. Skrifter, 1926. Bd. 1, hefte 5, p. 317-56, 12 illus.) **Title tr.:** Lappish sacrificial stones and sacred mountains in Norway.

Contains detailed description and some photographs of Lapp cult places. Regional lists are given of (altogether) some 220 stones, rocks and mountains, based on records left by Isak Olsen (1715), K. Leem (1767), and supplemented by author's own finds. In the introduction he discusses the Lapps' worship of peculiarly shaped stones and rocks, called by them *sieide*; the sacrifices made to bring good luck in hunting or fishing; smearing with the blood and fat of killed reindeer, and depositing the horns and bones. Though many of the stones were destroyed by missionaries, the larger ones still remain; none bears traces of sculpture. Native names and geographical location of such places and objects are given. Reverence is paid them by doffing the cap and footgear when passing by, or approaching the sacred stones creeping on all fours. **Copy seen:** DLC.

31513. QVIGSTAD, JUST KNUD, 1853- . Lappische Sprichwörter und Rätsel. (Oslo. Universitet. Etnografiske museum. Skrifter, 1922. Bd. 1, hefte 3, p. 137-251, refs.) **Title tr.:** Lappish proverbs and riddles.

Contains 757 proverbs and 132 riddles in Lappish and German, taken from printed sources available (as indicated in the introduction), or noted down since about 1890 by author himself and his collaborators. Many of the proverbs are borrowings from neighboring peoples, mostly Finns, and most of the riddles have been taken over from the Norwegians and Finns. Riddles are rather rare among present-day Lapps. Comparative and bibliographical notes are added. **Copy seen:** DLC.

31514. QVIGSTAD, JUST KNUD, 1853- . Lappische Texte aus Kalfjord und Helgøy: Reste eines ausgestorbenen Seelappendialektes. (Oslo. Universitet. Etnografiske museum. Skrifter, 1925.

Bd. 1, hefte 1, p. 21-40) *Title tr.*: Lappish texts from Kalfjord and Helgöy: remains of an extinct dialect of the Sea Lapps.

Contains description of the dialect and texts (in Lappish and German) of 16 narratives. These were noted down by the author in 1886 on two islands near Tromsø from 17 persons, who were the last remaining individuals to use this dialect of "Sea-Lappish."

31519. R., R. Permafrost. (Federal science progress, May 1947. v. 1, no. 4, p. 8-11, illus., map, diagrs.)

"Permafrost prevails in regions with long, cold winters and short, dry summers, small annual precipitation and a mean annual temperature below 0° C. The depth of continuous permafrost in arctic regions varies from a few in. to 1400 ft. Permafrost in subarctic regions is complicated by irregular active layers, ground water, islands of unfrozen ground, ice veins, ice sheets or lenses, and water pockets. Construction problems arise from disturbance of the thermal régime between active layer and permafrost. Heat transfer from a building to the ground is avoided by providing an open air space between the building and the ground through which cold air circulates in winter and warm air is kept out in summer, and by placing insulating layers between the floor and the floor beams. Granular soils with their high critical moisture content, good drainage and strong bearing capacity are preferred for building sites. Arctic research programs are reviewed."—SIPRE.

31527. RÄNK, GUSTAV, 1902- Die heilige Hinterecke im Hauskult der Völker Nordosteuropas und Nordasiens. Helsinki, Suomalainen Tiedekatemia, 1949. 246 p. 60 illus. on plates, 250 refs. (Folklore Fellows. FF. Communications, no. 137) *Title tr.:* The sacred back-corner in the domestic cult of the peoples in northeastern Europe and northern Asia.

Contains an ethnological study on the worship of house or family spirits among the east European peasant population, and among the primitive peoples of northern Eurasia. In the sacred corner, opposite the common entrance, in the men's part of a dwelling, the idols of the head of the family are placed: they are helpful to man's work (hunting and fishing). The housewife, being from another sib and having her own gods, is prohibited from entering the sacred corner, and from touching the idols and the hunting or fishing implements. Among the northern hunters and reindeer nomads, the woman's cult place is near the entrance. The Lapp tent has a separate back door, or merely a hole in the back wall, for men starting upon or returning from a hunting party, bringing in killed animals, passing out hunting implements, or the shaman's drum. Remnants of similar customs can

be observed also among several other northern Asiatic peoples, e. g., the Yurak Samoyeds, Ostyaks, Tungus, and Paleo-Siberians: idols placed on a sledge and kept behind the tent, a place forbidden to womenfolk; hunting prey, especially bear, never brought through the common door, but through the back door (hole), a window, or even through the smoke hole (chimney). The Eskimos in Asia and Greenland carry the human corpse through a hole made in the back part of the house. Similarly, idols of Samoyeds and Ostyaks are never transported through the common door. The author's theory, which he tries to prove here, is that the numerous tabus for womenfolk originate not in the notion of "woman's impurity," but from the idea that the wife in an exogamic society has other family gods.

31528. RÄNK, GUSTAV, 1902- . Das System der Raumeinteilung in den Behausungen der nordeurasischen Völker; ein Beitrag zur nordeurasischen Ethnologie. I Teil. Stockholm, Institutet för Folklivsforskning 1949. 136 p. 33 illus. (Institutet för folklivsforskning vid Nordiska Museet och Stockholms högskola. Skrifter 2) 140 refs. **Title tr.:** The system of space division in the dwelling of the northern Eurasian peoples. A contribution to the northern Eurasian ethnology. Part I.

Contains a monograph on the situation and plan of the peasant's dwelling house, and especially on its interior arrangement: parts allocated to men and to women, location of oven and dining table, the place of honor and the sacred corner in the house. The materials are drawn from works on the eastern European peoples: Finns, Karelians, Estonians, northern Russians, Cheremis and Vot-yaks. Part 2 will deal with the peoples of the far North and eastern Eurasia. The author stresses the great influence of the religious beliefs upon the interior arrangement of the dwelling.

31536. RAINEY, FROELICH GLADSTONE, 1907- . The significance of recent archaeological discoveries in inland Alaska. (In: *Asia and North America, trans-Pacific contacts*, pub. as: Society for American antiquity, Jan. 1953, v. 18, no. 3, pt. 2, p. 43-46)

Contains a review of work in post-war years, discussing sites and small collections of implements discovered in the region, particularly by Giddings and Larsen. The importance of discoveries of a flint industry in a site on the campus of the University of Alaska, at Cape Denbigh, on Birch Lake, in the Shakwak valley, on Trail Creek, and at Ester Creek near Fairbanks, is appraised. Author concludes that the data, limited and scattered, provide no evidence of the migrations from Asia across Bering Strait assumed to have taken place in the Neolithic period. The Eskimo culture has developed in the Arctic in recent times and it has undergone surprisingly rapid changes; northwestern America and northeastern Siberia, under present climatic conditions, together form one of the most formidable barriers to human communications one can find anywhere in the world.

Contains a lecture on various types of vessels used in arctic waters, and their construction, particularly those used by A. E. Nordenskiöld, the *Frithjof*, *Vega* and *Sofia*. **Copy seen:** DLC.

31543. RANKE, OTTO F. Die Wärmeregulation bei Kälte. (Klinische Wochenschrift, Feb. 6, 1943. Jahrg. 22, Nr. 6, p. 113-16) 12 refs. **Title tr.:** Temperature regulation in cold environment.

Contains a review dealing with the division of the body into a thermally stable interior and the variable surface; the mechanism of thermal regulation of the skin; heat production; physiology during cold exposure (circulation, endocrines, metabolism, excretory system, etc.); physiology of cold injury; cold acclimatization, etc. **Copy seen:** DSG.

31544. RANSOM, JAY ELLIS. Aleut linguistic perspective. (Southwestern journal of anthropology, 1946. v. 2, no. 1, p. 48-55) 14 refs.

Contains a report on the history of linguistic work on the Aleut language, chiefly the Fox Island dialect, from the time of Veniaminov to present day. The distribution of this dialect is sketched. Problems and investigators are mentioned and the works published and unpublished, old and new, are briefly reviewed.

Copy seen: DLC.

31545. RANSOM, JAY ELLIS. Writing as a medium of acculturation among the Aleut. (Southwestern journal of anthropology, 1945. v. 1, no. 3, p. 333-44) 17 refs.

Contains an account of the role played by printed books and the art of writing among the Aleuts of today. The male Aleuts, as a rule, can read and write in their native language, the youth learns from father or uncle. They write expressively and like to write letters, to keep diaries and personal notes, especially of fur catch, etc. Religious books, printed in the Aleut language since

Veniaminov invented an Aleut alphabet, are commonly read. Printed and written matter in Aleut is preserved and treasured in the family. English learned in the schools has in writing and print less regard and more limited use (trade). A short list of books printed in Aleut is added. The observations were made in 1936-37 among the Umnak and Unalaska Aleuts living in the Fox Islands group.

31546A. RASMUSON, ELMER EDWIN, 1909- . The financial threshold of Alaska. (Scientific monthly, July 1953. v. 77, no. 1, p. 19-23, illus.)

Reasons for Alaska's "pioneer, or frontier, economy" are noted with particular reference to lack of investment capital, high cost of living, lack or scarcity of corporations, investment companies, etc., and the "negative" attitude of legislators toward business. In Alaskan development, cost reduction is important and may be brought about by such factors as development of hydroelectric power, improvement in transportation, stimulation of agriculture, and increased population. Lack of statehood is considered a psychological barrier to economic development. Future financial problems and progress are considered with regard to social welfare, natural resources, role of government, public power, banks, and insurance companies. Based on author's address to the Third Alaskan Science Conference, 1952.

31547. RASMUSSEN, KNUD JOHAN VICTOR, 1879-1933. The Alaskan Eskimos as described in the posthumous notes of Dr. Knud Rasmussen, by H. Ostermann. Edited after the latter's death with the assistance of E. Holtved.

Copenhagen, Gyldendal, 1952. 292 p. 21 illus. incl. map. (Thule Expedition. 5th, 1921-1924. Report. v. 10, no. 3) Translated from the Danish by W. E. Calvert.

Previously published reports from this expedition are listed in *Arctic Bibliography*, No. 17665.* This is the last of its leader's three posthumous studies worked up by Ostermann. Rasmussen's visits, in the final phase of the Fifth Thule Expedition, May-Sept. 1924, to Alaskan Eskimo settlements at Point Barrow, Icy Cape, Point Hope, Kotzebue, Nome, Little Diomed and King Islands are described, and (p. 83-96) extract given from his diary covering the trip to the Eskimos and Chukchis at Uelen on the Chukotsk Peninsula, U.S.S.R. Notes on customs, history, etc., are given for each settlement visited. Ethnographical notes (p. 113-43) are included on hunting (weapons, traps, customs), phases of life (birth, death, etc.), religion and beliefs, settlements and hunting grounds, names, origin of the Chukchis, etc. Some 54 Eskimo myths and tales are related in English (p. 150-264).

31556. RAUN, ALO, 1905- National in form, socialistic in content. (Ukrain-

ian quarterly, 1950. v 6, no. 2, p. 115-21)

Contains discussion on theory and practice in treatment of national minorities in the U.S.S.R. Shortly after the October Revolution, a period of national freedom was proclaimed with propagation of the use of national languages in literature, schools, and press. Numerous ethnic minorities had their native alphabets put into Latin characters. Since 1937, practically all the minorities have been under strong pressure of Russianization: after a period of Latinity (1920-1937), the Institut ŝazyka i pis'menosti (Institute of languages and written languages) at the Akademiā nauk worked (1937-40) to replace the native alphabets in Latin with new ones in Russian characters. The native alphabets were abolished; several native tongues (e. g. the Yeniseian and Kamchadal) were eliminated as literary languages; in 1940, during the Finnish-Russian Winter War, the Karelians were allowed, as a political measure, to abandon the Russian characters introduced in 1937, and to resume their Latin alphabet.

Copy seen: DLC.

31557. RAUN, ALO, 1905- . The present state of the world language problem with special reference to Russian and English. (Scholar. Heidelberg, 1947, no. 1, p. 22-25)

Contains brief survey of Russian and of English as a potential internationally-used language, stressing difficulties of the former. Soviet policy regarding languages of non-Russian peoples of the U.S.S.R. is summarized, including specific reference (p. 23) to those of the North; latinization of vernacular alphabets was promoted during (roughly) 1922-37. Since 1937, latinized and vernacular alphabets have been superseded by the Cyrillic (dates given). This it is suggested, is "meant to pave the way for adoption of the Russian language" itself among non-Russian national minorities. Linguistic difficulties are noted.

RAUP, HUGH MILLER, 1901- . Physiographic ecology in Alaska; with comment by R. S. Sigafos. *See* Alaskan Science Conference, Nov. 1950. Proceedings, 1951. No. 20117.

31558. RAUP, HUGH MILLER, 1901- . Some botanical problems of the

arctic and subarctic regions. (Arctic, July 1953. v. 6, no. 2, p. 68-74)

Northern vegetational problems include primarily those of flora and of plant communities. A "comprehensive, descriptive flora, with keys and illustrations" has not been developed for boreal North America, but published regional lists are noted here. The study of plant communities must be correlated with climate (including microclimate and climatic change), soils, and the evolution of land forms. Training of field workers is discussed, and examples are given of problems met in the field. An outline of problems derived from the study follows the text.

31559. RAUSCH, ROBERT LLOYD, 1921- . Animal-borne diseases. (U. S. Public Health Service. Public health reports, May 1953. v. 68, no. 5, p. 533-34)

Contains account of a paper presented at the Third Alaskan Science Conference, Sept. 1952, and dealing with the intermediary hosts and transmission of hydatid disease (Echinococcosis), trichinosis, rabies, etc.

Copy seen: DSG.

RAUSCH, ROBERT LLOYD, 1921- . Biotic interrelationships of helminth parasitism in Alaska. *See* Alaskan Science Conference, Nov. 1950. Proceedings, 1951. No. 20117.

31560. RAUSCH, ROBERT LLOYD, 1921- . On the land mammals of St. Lawrence Island, Alaska. (Murrelet, May-Aug. 1953. v. 34, no. 2, p. 18-26, 4 tables) 21 refs.

Contains introductory notes on the geography, population and reindeer of the island, followed by some new data on the local mammals, with particular reference to their taxonomy. Craniometrical data are included for some forms. This work is part of an investigation on animal-borne diseases of the Arctic Health Research Center, Anchorage, Alaska.

Copy seen: DSI-M.

31561. RAUSCH, ROBERT LLOYD, 1921- . On the status of some arctic mammals. (Arctic, July 1953. v. 6, no. 2, p. 91-148, illus., maps, diagrs., tables) 83 refs.

Contains a study of mammals of arctic Alaska, mainly from the Brooks Range, each species discussed in terms of hol-arctic distribution. The information

was obtained during investigations by the Animal-borne Disease Branch of the Arctic Health Research Center, Anchorage, Alaska, during which 4,500 mammals were collected. Alaska has about 30 widely distributed species, many circum-boreal. These and their varieties are described in systematic order. The grizzly or brown bear, wolf, arctic hoary marmot, ground squirrel, tundra vole, narrow-skulled or gregarious vole, and caribou are treated in some detail, and the relationship of the caribou to Alaskan Eskimo economy is described. The Romanzof Mts. of the Brooks Range and Arctic Village near the southern limits of the Brooks Range on the East Chandalar River are briefly described. Photographs show skulls, tables give cranial measurements, and maps show Alaskan distribution of various species.

31562. RAUSCH, ROBERT LLOYD, 1921- . Studies on the helminth fauna of Alaska, XIII. Disease in the sea otter, with special reference to helminth parasites. (Ecology, July 1953. v. 34, p. 584-604, illus.) 21 refs.

Contains a study based on autopsy findings and such from diseased animals on Amchitka Island. A variety of helminths are described from 31 hosts including at least two highly pathogenic forms. In the latter cases gross- and histo-pathological changes are described as well as pathogenicity, symptomatology, etc. An introductory part deals with the distribution and abundance of the animals, their food, weight, etc.

31563. RAVDONIKAS, V. I. K izucheniiu naskal'nykh izobrazhenii Onezhskogo ozera i Belogo moria. (Sovetskaiia arkheologiya, 1936. no. 1, p. 9-50, 8 text illus., 3 text maps, 10 plates) about 40 refs. *Title tr.:* A contribution to the study of rock engravings on Lake Onega and the White Sea.

Contains description of petroglyphs investigated by the author in 1934-35 at Besov Nos on the shore of Lake Onega (near Bessonosovskaya village, district of Pudov), and on the White Sea island of Bessovy Sledki, near Vygostrov village (see map p. 23). Several new pictures were discovered after cleaning the rocks of lichens, and 750 reproductions of petroglyphs were made, using modern techniques. The author considers the pictures to belong to different periods,

some are neolithic (comb ceramic sites were found in the vicinity), and two styles, naturalistic and geometrical, were observed. The pictures represent animals and birds ("swans" are a common motif), also human figures ("devils"). Summary in French, p. 46-50.

31568. RAWSON, DONALD S., 1905- . Limnology in the North American Arctic and Subarctic. (Arctic, Oct. 1953. v. 6, no. 3, p. 198-204)

Distribution of arctic lakes is noted and the literature reviewed. General problems in arctic limnology include thermal and trophic classifications, water circulation, productivity as compared with arctic marine waters, and comparison of arctic and alpine lakes. Future research programs should comprise a reconnaissance of lakes in the Canadian Arctic, intensive investigation of selected lakes and a river, expansion of Ungava work, and general studies on distribution of fresh-water fish. Cooperation between limnologists, plant ecologists, and geologists is urged.

31570. RAY, LOUIS LAMY, 1909- . Permafrost research problems. (In: Alaskan Science Conference . . . 1951. Proceedings, pub. 1953. p. 178-83)

Permafrost and seasonally frozen ground are defined. Research problems suggested and discussed include the origin, age, and geographical extent of permafrost, its effect on geomorphic processes in the active layer, determination of its lateral and vertical extent in certain areas, factors affecting its growth and decay, and the origin, growth, and decay of ground-ice masses, temperature within the permafrost, and related problems of the geophysical properties of ice

and supercooled water, and the electrical and acoustical properties of perennially frozen material. Work at the Arctic Research Laboratory, Point Barrow, is noted.

Contains critical notes on a grasshopper, *Melanoplus borealis*, collected by S. C. Palmer, a botanist of Bowdoin-Baffinland Expedition of 1929, under Capt. D. B. MacMillan, near Cape Mugford and at Nain; also information supplied by Palmer on the occurrence of the species in the area studied. **Copy seen:** MH-Z.

31585. REICHEK, MORTON A. See end of CMP by second quarter of 1953—tough going for Alcoa's Alaskan venture. (Engineering and mining journal, Oct. 1952. v. 153, p. 108)

Summarizes difficulties to be overcome by the Aluminum Co. of America before it can begin building its proposed \$400 million power project in Alaska's Taiya valley (59°30' N. 132°21' W.) near head of Chilkoot Inlet in Southeast Alaska. In its initial phase the project comprises an aluminum reduction plant and an 800,000 kw. hydroelectric plant. Alcoa

must get Canadian approval to dam the Yukon gorge, raise the level of five interconnected Canadian lakes, reverse part of the discharge of these lakes through a 13½ mile tunnel beneath Chilkoot Pass, and drop the water into Alaska to generate power. It must also purchase large land areas in Alaska for its smelter, powerhouse, and townsite; and get clearance as to military risk. **Copy seen:** DLC.

Contains a report of cold pressor tests made on normal and toxemic patients during pregnancy and in the puerperium. The results failed to support the idea that the test may reveal impending toxemia, or that it may be of practical value in differential diagnosis of pregnancy toxemias. **Copy seen:** DLC.

31587. REIKHARDT, AKSEL' NIKOLAEVICH. *Nasekomye zhestkokrylye*, t. 5, vyp. 3, Sem. *Sphaeritidae i Histeridae*, Ch. 1. Moskva-Leningrad, Izd-vo Akad. nauk SSSR., 1941. xiii, 421 p., illus. (177 fig. incl. maps). (*In*: *Fauna SSSR. Insecta Coleoptera*, t. 5, vyp. 3 (Nov. ser. no. 26)) 100 refs. **Title tr.:** Beetles. Fam. Sphaeritidae and Histeridae, pt. 1.

Contains an index to species of these two families, diagnosis, morphological sketch, data on distribution and ecology, a key, and descriptions of two species of Sphaeritidae (p. 1-10). Taxonomic treatment of Histeridae is given: in the general part (p. 11-64) a diagnosis of the family, morphology and terminology, systematic position and phylogeny, classification, geographic distribution (tables 1-2), biology, ecology, economic importance (useful as enemies of some plant pests), and bib-

liography. In the special part (p. 65-344) are the tables for the determination of subfamilies, genera and species; and descriptions of 222 species and 17 sub-species (seven species and three sub-species described as new) with synonyms, and data on biology, ecology, variation and geographic distribution. Index of Latin names is appended. Some species native to northern regions of the U.S.S.R. are included. Summary in German, p. 345-409. **Copy seen:** DLC.

31588. REIMERS, CARL. Symptome und Behandlung der örtlichen Erfrierungsschäden. (*Zentralblatt für Chirurgie*, Oct. 1943. Bd. 70, no. 44, p. 1573-84) **Title tr.:** Symptoms and treatment of local frost injuries.

From experience in two winter campaigns in Russia, author deals with kinds of cold injury and its pathology; sympathetic intervention; rewarming; degrees of frostbite; sepsis after frostbite; gangrene and its management; surgery. **Copy seen:** DSG.

31589. REIMOSER, EDUARD, 1864-1940. Katalog der echten Spinnen (Araneae) des paläarktischen Gebietes. Wien, 1919. 280 p. (Zoologische-botanische Gesellschaft, Vienna. *Abhandlungen*. Bd. 10, heft 2) 1800 refs. **Title tr.:** Catalog of true spiders (Araneae) of the palaearctic region.

Contains a systematic list of over 3400 species of palaearctic Europe and Asia, including some native to northern Scandinavia, European Russia and Siberia. Additions and corrections, also an index of families and genera are appended (p. 276-80). **Copy seen:** MH-Z.

31590. REIN, H. Physiologische Grundlagen zum Verständnis von Wärme- und Kälteschäden am menschlichen Organismus. (*Archiv für Dermatologie und Syphilis*, Jan. 15, 1943. Bd. 184, p. 23-33, 2 diagr.) 13 refs. **Title tr.:** Physiological basis for the understanding of heat and cold injury in human organisms.

Contains an account of the achievements of the previous 20 years in elucidating the problem of thermal adaptation, defense against, and injuries from extreme temperatures. Includes discussion of the role of circulation, nervous and

endocrine systems, metabolism, etc., during exposure to cold as well as temperature regulation, heat balance, temperature gradient in the body and the pathology of cold injuries. Author believes that abnormal metabolism is the cause of heat and cold injuries, and not the gross physical or chemical lesions; also, that all parts of the organism participate in temperature regulation. The skin as a seat of temperature receptors, the importance of the trigeminal supply area in thermoreception, the paucity of receptors in the feet, are noted. Some practical recommendations on prevention of frostbite conclude the account. Abstracted in *Deutsche medizinische Wochenschrift*, Dec. 1942, *Jahrg.* 69, Nr. 50, p. 1231. **Copy seen:** DSG.

31591. REINHARD, KARL R. A distemperlike disease. (U. S. Public Health Service. Public health reports, May 1953. v. 68, no. 5, p. 535-36)

Contains account of a paper delivered at the Third Alaskan Science Conference, Sept. 1952, and dealing with the importance of huskies in Eskimo life and economy; the distemper-like epizootic at Point Barrow (fall 1951) and at Anaktuvuk Pass (summer 1952) in northern Alaska, the symptoms of the disease and its course; immunization measures taken during the outbreak. **Copy seen:** DSG.

31597. REMPEL, G. Muskeg crawler solves problem of exploration in northern Canada. (*World petroleum*, Aug. 1953. v. 24, no. 9, p. 42, illus. incl. text-map)

Describes vehicle designed by Imperial Oil Co. for exploratory travel in muskeg country in Northwest Territories. It has hydraulic drive and two continuous revolving 24-inch wide rubber-belted tracks running on four sets of dual 4.50 x 16 tires. Data for this article is taken from a paper by G. Rempel of Imperial Oil, Ltd., presented before the Canadian Institute of Mining and Metallurgy.

Lovĕn. **Title tr.:** Materials contributing to the study of the ethnic character of the Finnish races.

Contains anthropological investigation of the Finns proper, with occasional references to the other Finno-Ugric peoples. Based on literature and field work, measurements are given of 26 male and 31 female individuals from Tavastland, 28 males and seven females from Karelia, also those of 72 skulls in the Anatomical Museum of Helsinki, mostly of criminals from different parts of Finland. Two different racial types are established, one for Tavastland, another for Karelia. Physical and psychological characteristics of both types are given. The Karelian type shows a considerable Russian influence.

31617. RICHARDSON, HAROLD W. Build railroad through north Canadian bush. (Construction methods and equipment, Oct. 1953. v. 35, no. 10, p. 62-64+, 32 illus., text map)

The building of a 145 mi. railroad from Sherridon to the new Sherritt-Gordon mine at Lynn Lake, Manitoba, is reported, with emphasis upon problems of access, transportation and distribution of equipment rather than actual construction.

A string of camps was established along the entire route, complete with buildings, supplies, fuel, and equipment. In winter, caterpillar tractor-sleds operated over frozen tundra; in summer, a fleet of light float planes carried men, parts, and supplies; during break-up and freeze-up, helicopters were used. Some construction methods in rock and muskeg are briefly discussed; items of equipment are listed. Illustrations show various phases of the operations. **Copy seen:** DLC.

31618. RICHTER, CHARLES FRANCIS, 1900- Seismicity and structure of the Pacific region of North America. (*In: Pacific Science Congress. 7th, New Zealand*, 1949. Proceedings, v. 2, Geology, pub. 1953, p. 671-81, 5 text maps, 2 tables) 15 refs.

Includes brief discussion of western Alaska-Aleutian region. This area forms a typical active Pacific arc, for which no data on gravity anomalies are yet available. Shallow earthquake shocks are frequent, intermediate ones uncommon, and deep shocks lacking. The youngest, most active volcanic vents are north of the older ones, on the concave side of the arc, "an apparently exceptional feature" for such arcs. A chronological list of great earthquakes includes five from the Alaska-Aleutian area. Maps show earthquake epicenters in this region and the arc in relation to other Pacific seismic belts.

Ph. D. thesis on the influence of arctic climate and a nomadic mode of life upon the physical appearance of arctic peoples, their mentality, forms of economy and social organization. Their adaptation to cold in regard to clothing, diet and dwellings is investigated. The process of acclimatization is noted (Whites begin to like the polar regions after a lengthy sojourn); and the force of assimilation is mentioned (e. g. Russians become Yakutized and Eskimo girls are favored by Whites for marriage). Many references are made to Eskimos, Tungus, and Chukchis.

Seriiã geograficheskaiã, 1953, no. 1, p. 15-22, map) 13 refs. **Title tr.:** Some regularities in formation and distribution of the snowdrifts and principles of preventive measures.

Analysis of causes and processes of formation of snowdrifts. "Transfer of snow is usually observed in the layers near to the ground at wind speeds of 4 m./sec. and more. The most frequent snowstorms in U.S.S.R. occur at wind speeds of 6-9 m./sec. Greater wind speeds do not affect the rise of snowdrifts, which is explained by the small turbulence of air flow and by the heavy compressive action of strong winds. Rough surfaces covered by grass and the surface of wet or crusted snow do not contribute to snow transfer. Retention of snow, but not protection against snowdrifts, is an effective preventive measure . . ."—SIPRE. A tentative division of the U.S.S.R. into five regions of frequency of snowdrifts is proposed and illus. (map). The arctic and tundra regions, excepting the northeastern provinces (Chukotka),

belong to the sections of the most frequent snowdrifts. **Copy seen:** DLC.

31629.* RITTER, CHRISTIANE. Eine Frau erlebt die Polarnacht. Berlin, Propyläen-Verlag, 1938. 191, [1] p.,

*English translation *A woman in the polar night* (188 p.) is pub. by Allen & Unwin, London, and Dutton, New York, 1954 (copies in DLC).

1 l. illus., 6 col. plates, map. **Title tr.:** A woman experiences the polar night.

Contains the narrative of a Berlin artist, covering a year spent in West Spitsbergen while visiting her husband who lived there (at Gråhøken) as a hunter and trapper. Having no special interest in the Arctic nor a particular foreknowledge, the author's views (and illustrations, some in color) are distinguished by objectivity, remarkable observance, sense of color and "Stimmung." The effects of the environment, such as fog, the long night or day, storm, cold, solitude, etc., on her mood, thoughts and behavior are very keenly felt and aptly described. It is one of the few such sustained accounts, and one of the very few written by women who lived in the Arctic.

31631. RIVERS, VICTOR CLAUDIUS, 1905- . Transportation by tractor train in virgin areas of the far North. (Pacific builder and engineer, Jan. 1944. v. 50, p. 41-46, illus.)

"Experience indicates that large Caterpillars D-7 and D-8 are most satisfactory and economical for tractor-freighting heavy loads, even over frozen water ways, swamps, and tundra. Ten to 50-ton reinforced bobsleds with welded steel yokes or hitches are suitable for hauling large loads over extremely rough territory. Cradles or go-devils consisting of a large, strong pair of skids tied to form a sled of the same gage as the pulling tractor, are sometimes reinforced for longer durability with steel members and shoes on the skids. Wanigans are small, sled-mounted or skid-mounted structures accompanying the tractor-train to provide cooking, eating, and sleeping quarters. The crossing of doubtful ice or deep spots is made safer by laying mats of brush and trees, covered by iced-down snow perpendicular to the

line of travel. Behavior of engines and operating methods in extreme cold are discussed."—SIPRE. **Copy seen:** DLC.

31632. RIVOIR, JOHANN. Erfrierungen, Frostganganr und ihre Behandlung. (Monatsschrift für Unfallheilkunde und Versicherungsmedizin, 1942. Jahrg. 49, Nr. 1, p. 295-300, 2 illus.) **Title tr.:** Frostbite, frost gangrene and their treatment.

From experience with Greek troops during the Albanian campaign, information is given on degrees of frostbite, body regions most often affected, and therapy applied (conservative). An apparatus is described for creation of negative pressure and used in the treatment of frostbite among Greek soldiers.

31635. ROACH, F. E., and others. The diurnal variation of [OI] 5577 in the night-glow: geographical studies. (Journal of geophysical research, Mar. 1953. v. 58, no. 1, p. 73-82, 3 graphs, 3 tables) 31 refs. **Other authors:** D. R. Williams, and H. B. Pettit.

Includes a section (p. 81) on the

similarity shown by the diurnal change of oxygen line 5577 in the polar aurora to that of the nightglow 5577 at low latitudes. Measurement of 5577 in the polar aurora was made at Chesterfield, Keewatin District. Observations on auroras at Scoresby Sund, East Greenland, are also briefly discussed. **Copy seen:** DGS.

31636. ROADS AND CONSTRUCTION. Dr. Retty describes Labrador iron-ore project. (Roads and construction, Feb. 1950. v. 88, p. 53-54, illus.)

Summary of address before the Empire Club of Toronto, Jan. 1950, given by Dr. J. A. Retty, chief geologist of the Hollinger North Shore Exploration Co., Ltd., and of Labrador Mining & Exploration Co., Ltd., holders of concessions in the iron ore field. The terrain, hydro-electric possibilities, ore deposits, and development of the field to 1950 are described briefly. Canadian and United States markets are discussed. A company of certain American steel interests, the Iron Ore Co. of Canada, finances the operation, and a Canadian company, the Hollinger-Hanna, Ltd., will manage it.

Copy seen: DLC.

31637. ROADS AND CONSTRUCTION. Preliminaries in Quebec-Labrador iron ore mining project. (Roads and construction, Jan. 1950. v. 88, p. 58-59, 75, illus.) Reprinted from *Imperial Oil review*.

Outlines the history of discovery and development to 1950 of the immense iron ore field on the Quebec-Labrador boundary, near Burnt Lake and Knob Lake (approx. 58°48' N. 66°50' W.), 360 miles north of the St. Lawrence River, and describes the installation at Seven Islands on the St. Lawrence, of storage facilities for oil and gas, needed for preliminary road construction and exploratory work.

Copy seen: DLC.

31638. ROADS AND ENGINEERING CONSTRUCTION. Construction in the hydro-electric field reaches new peak of activity. (Roads and engineering construction, May 1953. v. 91, p. 124-25, 162-65, illus.)

Includes (p. 162-63) notes about the developments on Mayo River in Yukon Territory, and about the Laurie River development of the Sherritt Gordon Mines Ltd., in northern Manitoba, to supply power to the Lynn Lake mining field.

Copy seen: DLC.

31639. ROADS AND ENGINEERING CONSTRUCTION. Maintenance of the Alaska Highway requires constant vigilance. (Roads and engineering construction, July 1953. v. 91, p. 83-86, 108, illus.)

Describes maintenance of the 1,221-mile Canadian section of the Alaska Highway by the Royal Canadian Engineers.

Copy seen: DLC.

31640. ROADS AND ENGINEERING CONSTRUCTION. Permafrost problems under field investigation. (Roads and engineering construction, Feb. 1953. v. 91, p. 64)

Announces the establishment of a small experimental research station at Norman Wells, Mackenzie District by the Division of Building Research, National Research Council of Canada, with the co-operation of the Imperial Oil Co. Ltd., for the study of permafrost building problems.

Copy seen: DLC.

31641. ROADS AND ENGINEERING CONSTRUCTION. Progress of Labrador ore development. (Roads and engineering construction, May 1951. v. 89, p. 91-92, 130, illus. incl. map)

Summary of speech at Canadian Association of Equipment Distributors convention, Quebec Apr.-May 1951. Dr. J. A. Retty, chief geologist of the Iron Ore Co. of Canada, describes the Knob Lake iron ore project in general, and outlines the progress made on railway and on roads. Sketch map (p. 92) of eastern Canada shows location of the iron ore deposits. The abundant water power of the area is stressed.

Copy seen: DLC.

31642. ROADS AND ENGINEERING CONSTRUCTION. Tracklaying in northern Manitoba by C. N. R. (Roads and engineering construction, Feb. 1953. v. 91, p. 66, illus.)

Illustrates operation of tracklaying machines of Canadian National Railways on branch line to the Lynn Lake mining field in northern Manitoba.

31645. ROBERTS, PALMER W. Cold weather engineering. Part I. (Military engineering, Jan.-Feb. 1953. v. 45, p. 1-5, illus., map) 3 refs.

"A brief history of polar exploration, outline of terrain features of the Arctic, resources, and sea and ice conditions are presented. Environmental factors discussed include temperature, wind precipi-

tation, visibility and light. Preparations for arctic operations include the compilation of a Work Feasibility Chart. Personnel and clothing requirements are discussed."—SIPRE. *Copy seen:* DLC.

31646. ROBERTS, PALMER W. Cold weather engineering. Part II. (Military engineering, Mar.-April 1953. v. 45, p. 114-17, incl. illus., diagrs.)

"The fundamentals of arctic engineering practices are presented. The natural balance must be preserved, the supporting value of permanently frozen ground utilized, the thermal regime maintained. Migration of water through the frost zone must be held to a minimum. Factors affecting the building design are discussed. Masonry and continuous foundations are not recommended. All loads for large structures should be carried on footings, piles, or columns set well into the permafrost. The depth of column should be greater than twice the thickness of the active zone. Criteria for airfield, highway, and road design, location and construction are analyzed. Methods of sanitation are discussed."—SIPRE.

1947. 105 p. 46 illus. 8 fold. maps, 2 diagraphs, graphs, 6 tables. (U. S. Geological Survey. Alaskan volcano investigations, Report no. 2*) 71 refs. *Other authors:* G. C. Kennedy, H. H. Waldron, F. M. Byers, Jr., D. M. Hopkins, K. L. Wier, B. Fisher, F. S. Simons, D. E. Mathewson, and R. R. Coats.

Contains (in seven parts) results of volcano research with the object of protecting "civilian and military establishments from future destructive volcanism." Existing information on the Aleutian arc was collected and evaluated, and detailed field work was carried on in summer 1946. Areas studied include: (1) Pavlov volcano area near Cold Bay, Alaska Peninsula; (2) northwestern Unimak Island near Fort Glenn; (3) Great Sitkin Island; (4) northern Adak Island; (5) northern Kanaga Island; and (6) western Aleutian Islands from Kasatochi to Attu, a reconnaissance report. The above regions are covered separately, each report including general physical geography, detailed geology, description of volcanoes and lava flows, comments on future volcanic activity, and in some cases recommendations for future research. Geochemical and geophysical investigations on Unimak are discussed. Detailed geologic maps and many black and white photographs accompany each report.

31660. ROCHE, M. A., and M. R. C. MITCHELL. Waterworks and sewerage in the far North. (Public works, Aug. 1948. v. 79, no. 8, p. 21-22, 24, illus., table)

Contains account of an unusual distribution system at Flin Flon, Manitoba (54°45' N. 101°53' W.). "Permanent frost exists between one and sixteen ft. below the surface. Water for the mining company and the town is pumped from Cliff Lake through 13,000 ft. of 20 in. wood stave pipe to a reservoir for distribution. Storage tanks and utilidors for distribution are steam heated. Distribution lines are in 4000 ft. circuits in which water is circulated continuously. Steam is used to hold temperature at not less than 38° F. Water mains and sewers at Sherridon, Manitoba, are laid close together in trenches about eight ft. below the ground surface or together with steam pipes on the surface in wooden boxes packed with sawdust. The water mains are discharged into the dead ends of sewers to prevent freezing. Sewers laid in boxes are cast iron pipe and those buried in the ground are vitrified clay. The cost of heating the pipes in the boxes is quite high."—SIPRE.

31661. RODAHL, KÅRE, 1917- , and J. EDWARDS, Jr. The basal heat production of man exposed to cold environment. (*In:* Alaskan Science Conference . . . 1951, Proceedings, pub. 1953, p. 110)

In some women exposed to low environmental temperature, a rise in basal metabolism occurs, a condition ascribed by Du Bois to muscle tension preceding shivering. Experiments are reported by the author which confirm this earlier assumption. *Copy seen:* CaMAI; DLC.

31662. RODAHL, KÅRE, 1917- , and J. EDWARDS, Jr. The body surface area of Eskimos as determined by the linear and the height-weight formulas. (*In:* Alaskan Science Conference . . . 1951. Proceedings, pub. 1953, p. 119-20) 2 refs.

The surface area of 53 Eskimos from

five locations in Alaska was carefully measured by the Du Bois linear method. It was found that the average difference between the linear and the height-weight formulas was ± 1.3 percent in Eskimos, as against ± 1.5 percent for Whites. It is concluded that the height-weight formula is applicable to Eskimos, and its use should not cause any significant error in calculating their basal metabolic rates.

Copy seen: CaMAI; DLC.

31663. RODAHL, KÅRE, 1917- . The body surface area of Eskimos as determined by the linear and the height-weight formulas. (American journal of physical anthropology, Dec. 1952. new ser., v. 10, no. 4, p. 419-26, 3 tables) 10 refs.

Contains a comparative study of the body surface calculating method of E. F. DuBois and his height-weight method, as they apply to Eskimos. Forty-two males and 11 females, 16-53 years old, from five different areas of Alaska were investigated. Both methods were found to be within limits of accuracy in the material tested.

Copy seen: DLC.

31664. RODAHL, KÅRE, 1917- . The body surface area of the Eskimo. (Journal of applied physiology, Nov. 1952. v. 5, no. 5, p. 242-46, tables) 9 refs.

Contains an account of careful measurements of the body surface area of 53 Eskimos from five different localities in Alaska, made according to the Du Bois linear method, and compared with results obtained by the height-weight formula. It is concluded that the differences between the two methods are within limits of accuracy and the height-weight formula is therefore also applicable to the Eskimo.

31666. RODAHL, KÅRE, 1917-, and C. R. SHAW. Nitrogen output of Eskimos on a high protein diet. (*In: Alaskan Science Conference . . . 1951. Proceedings, pub. 1953, p. 120-21, table*) 2 refs.

Contains a report on five-hour post-absorptive determinations of nitrogen output in four groups of Eskimos from various Alaskan areas. The observations were made following native (high-protein) and white man's diets. Following the latter, the nitrogen output dropped gradually to levels of the same order as those in white controls. The highest N-intakes and outputs were recorded in Eskimos from Anaktuvuk Pass, suggesting a much higher rate of N-metabolism than observed in experiments with white subjects.

31667. RODAHL, KÅRE, 1917-. North; the nature and drama of the polar world. New York, Harper & Bros., 1953. 237 p., 16 plates.

Contains (p. 127-227) popular account of Project Icele, a U. S. Air Force expedition under Colonel James O. Fletcher, to establish a scientific station on the floating ice island T-3 (approx. 88°17' N. 166° W.), Dec. 1951-Apr. 1952. The reconnaissance flight from Alaska Dec. 21, 1951; preparations and launching of the expedition Mar. 19, 1952, from Thule, northwest Greenland; 13-day sojourn on the "island" by party of four; air transport and landing and supply operations, are described. The station established, its personnel and work are outlined. The nature of the ice island, and the topographic, glaciological, oceanographic, biological, and particularly, meteorological studies carried out are summarized. An introductory survey of arctic exploration; the ice, biology and natural resources of the polar basin; and brief sketch of the discovery of the floating ice islands since 1946, precedes the account of Project Icele. Requirements for human survival in the way of physical abilities, physiological and psychological factors, food, clothing and shelter, are dealt with (p. 74-111), summary given in popular style of author's studies of vitamin A consumption, trichinosis in arctic mammals, disease among Eskimos,

frostbite, spekk finger, and his extensive observations of human behavior under arctic conditions. Reviewed by Trevor Lloyd in *Arctic*, Dec. 1953, v. 6, no. 4, p. 273-75; and by P. D. Baird in *Beaver*, Mar. 1954, p. 56.

Contains an account of experiments on rabbits with experimental frostbite of the feet and subsequent periarterial sympathectomy. The latter when performed up to one hour after freezing, produced a considerably increased edema as compared with the other, non-denervated foot. Sympathectomy resorted to two hours later had no effect on the cold injury.

31683.* ROSBERG, JOHAN EVERT, 1864-1932. Anteckningar om lapparna i Finland. (Terra, 1910. v. 22, no. 1-2, p. 1-26; no. 3-4, p. 181-244; no. 5, p. 277-99, illus., tables) 37 refs. **Title tr.:** Notes on the Lapps of Finland.

Contains (pt. 1, p. 1-26) an illustrated anthropological study of the Lapps. The available literature (refs. given) is compared with field studies conducted in course of six summers' sojourns (of varying length) in Lapland (66°-70° N. lat). Body proportions are discussed and measurements of height, length of arms, hands and feet are given; size of skulls is included and discussed in comparison with data from the literature. Facial features and expressions as well as mental characteristics are discussed. The color of hair, eyes and complexion is considered. On the whole, agreement is found between data from the literature and author's observations. The study comprises the reindeer-, sea- and river Lapps. The peculiar catlike gait of the Lapps (in particular reindeer Lapps) is discussed. In pt. 2 (p. 181-224) five

*No. 31683-31684 have the same text and illus. as No. 25644, but lack the German summary appended to the latter, 1912, issue.

groups of reindeer Lapps in northern Finland (Lapps whose reindeer herds graze in the mountains) are discussed in relation to their respective regions: (1) Sodankylä (farthest south, 67°30' N. 26°40' E.), (2) Kittilä and Muonio, (3) Enontekiö and Muonio, (3) Enontekiö (68°30' N. 23°30' E.), (4) Inari, and (5) Utsjoki (farthest north 69°50' N. 27° E.). An historical survey of each group from about 1750 to 1910 is presented (the Sodankylä Lapps from 1600 on). Population figures, based on parish records, are given for each tenth year from about 1800 to 1890 and then for each year from 1890 to 1910. Information on the settlements of the reindeer Lapps, their migrations, the size of their herds, and their daily life is given.

In pt. 3 (p. 277-79), the river or fisher Lapps of the Tana (Teno) River region (between northern Lappi and Finnmark) are dealt with. They fish salmon in rivers, thus differing from the lake Lapps, who fish pike in lakes and reject the salmon. The customs, dialects and clothing of the river and reindeer Lapps are similar. Reindeer are also kept by the river Lapps, while the lake Lapps keep cows and sheep. Table shows number of reindeer owned in 1901 by river Lapp families in Utsjoki parish (from four to 300 head per family). Although the river Lapps are poorer than the other groups, some of them own cabins with several outhouses. The apparel, household goods, tools and vehicles of the river Lapps are described. Numerous photographs and some sketches illustrate dwellings (incl. interiors), costume, occupations, etc., in specific localities.

31684.* ROSBERG, JOHAN EVERT, 1864-1932. Anteckningar om lapparna i Finland. (Terra, 1911. v. 23, p. 15-50, illus.) **Title tr.:** Notes on the Lapps in Finland.

Two groups of Lapps are discussed: the lake Lapps of the Inari region and the "ekolts," Russian Lapps who settled on the northern and eastern shores of Lake Inari (69° N. 28° E.). The former are considered by some authorities to be descendants of Lapland's earliest inhabitants. The lake Lapps speak an old dialect not understood by the reindeer Lapps. Their family and place names are discussed. There were approxi-

mately 845 lake Lapps in the Inari region in 1910. Fishing is their main occupation, but most of them also possess some livestock and reindeer. They live in huts, not in tents, but they frequently change their abode because of the barrenness of the terrain. They are a sober people, but heavy coffee drinkers. The last "skolt" in the region died before the turn of the century. **Copy seen:** DLC.

31685. ROSBERG, JOHAN EVERT, 1864-1932. Docenten Ragnar Hult. (Terra, 1899, v. 11, no. 6, p. 355-67, plate) **Title tr.:** University lecturer, Ragnar Hult.

A biographical sketch of the Finnish geographer, Ragnar Hult (1857-1899), one of the founders of the Finnish Geographical Society and the first editor of its journal, *Geografiska föreningens tidskrift* (later *Terra*). He was especially interested in plant geography and published a number of studies on the vegetation and flora of Finnish Lapland. He wrote many articles of a popular nature in order to increase public interest in all aspects of Finland's geography. His cartographic work, particularly is praised. He was also the author and co-author of a number of school geographies. Several of his writings are cited in text but a complete list is not given.

31687. ROSBERG, JOHAN EVERT, 1864-1932. Finnarna i Tromsø amt. (Terra, 1915. v. 27, p. 219-236, illus.) **Title tr.:** The Finns in Troms county.

Of the approximately 12,200 persons of Finnish stock in northern Norway, a considerable number live in Troms county. An historical survey of Finnish colonization of the region is given.

*No. 31683-31684 have the same text and illus. as No. 25644, but lack the German summary appended to the latter, 1912, issue.

Culturally the Finns occupy an intermediate position between the Norwegians and the Lapps. Finnish is still spoken by many. The physical appearance of typical Finns of the region is compared with that of the Norwegians and Lapps. It is assumed that the Finnish element will gradually disappear, due to the lack of continued immigration.

Copy seen: DLC.

31688. ROSBERG, JOHAN EVERT, 1864-1932. En lafshedbrand i norra Enare. (Terra, 1907. v. 19, p. 101-102) *Title tr.:* A lichen fire in northern Inari.

A lichen fire was observed and quenched by the author and others during a journey in the region between Lake Inari and Neiden in northernmost Lappi. It was due to the negligence of a fisher Lapp. The author points out that a reindeer Lapp would never make a fire where there is any vegetation, as he uses the lichen-covered terrain as a pasture for his reindeer.

31689.R OSBERG, JOHAN EVERT, 1864-1932. Några ord om finnarna vid Pasvik älf (Patsjoki). (Terra, 1907. v. 19, p. 217-22) *Title tr.:* Some facts about the Finns along the Pasvik River (Patsjoki).

The Patsjoki flows from Lake Inari into the Arctic Ocean (between 69° and 70° N.). The first inhabitants of the region were Russian "skolt" Lapps and some Russians, but toward 1860 it was again completely deserted. A little later, Finns from Lappi province began to settle there. In 1907, 330 Finns were living along the Patsjoki, all of them Lutherans. Their chief occupations were fishing and logging. After 1870 the Norwegian government encouraged its nationals to settle there, and with the development of the iron-mining district around Kirkenes, the Norwegian population soon outnumbered the Finnish element. No further colonization of the region by Finns is likely.

31692. ROSBERG, JOHAN EVERT, 1864-1932. Skidturer i de nordnorske fjällen. (Terra, 1918. v. 30, p. 128-35, plate) *Title tr.:* Skiing trips in the mountain tracts of northern Norway.

Summer skiing is possible in parts of northern Norway that are from 600 to 1000 m. above sea level, but the spring is the best time for skiing and for conducting snow studies. The type of skis used in Norway is described. Snow profiles, the distribution of snow in the different mountain zones, types of snow, the development of a layer of ice beneath the snow in the maritime regions, avalanches, the effect of thawing on snow, etc., are discussed in a popular manner.

Copy seen: DLC.

31693. ROSBERG, JOHAN EVERT, 1864-1932. Snöbroar i de norska fjällen. (Terra, 1916. v. 28, p. 309-314, illus.) *Title tr.:* Snow bridges in the Norwegian mountains.

Natural snow bridges are rarely found in Finland, but they are frequent in the mountain regions of northern Norway,

where they generally last longer and are stronger than those in the Alps, due to the greater duration and severity of the Norwegian winters. Snow bridges often have a thickness of several meters and are commonly used by reindeer herds to cross gorges. The frozen spray of waterfalls contributes to the formation of such bridges. They are dangerous after mid-summer. Those that are still able to support weight in August are without doubt accumulations of several years' standing.

31704. ROSS, J. E. R. Shoran operations in Canada. (International hydrographic review, Nov. 1953. v. 30, no. 2, p. 23-31, text map, 3 tables)

Operations with shoran as applied to surveying and mapping began in 1947. To 1951, the shoran net extended down the Mackenzie River to the arctic coast. Thirteen stations have been prepared in a 1,200 mile belt from Great Bear Lake eastward to Hudson Strait which will form the basis of a net of 46 lines to be measured in 1952. Triangulation arcs in Yukon Territory and northern Quebec are noted. The shoran project, methods of operation and application to mapping are discussed in some detail. Electronic methods greatly facilitate survey work in the North where normal control methods are slow and difficult.

31707. ROSSOLIMO, LEONID LEONIDOVICH, 1894—. Über einige neue und wenig bekannte Infusoria-Astomata aus den Annelida des Russischen Nordens. (Zoologischer Anzeiger, 1926. Bd. 68, no. 1-2, p. 52-57, illus.) **Title tr.:** On some new and little known Infusoria Astomata from the annelids of the Russian North.

Contains descriptions of ten species of Infusoria Astomata, of which six are new to science, living parasitic in annelid worms obtained in Barents Sea, in Kola Peninsula (Umba) and in Vestsjitsbergen.

Copy seen: MH-Z.

31708. ROST, HELEN, and T. SOOT-RYEN. Notes on the winter-food and parasites of the plaice, *Pleuronectes platessa* L. Tromsø, Norway, Tromsø Museum, June 30, 1952. 7 p. 3 tables. (Astarte, no. 3) 4 refs.

Contains results of study of 389 samples of intestines of plaice collected from ten localities near Tromsø. Dominating food was found to be small pelecypods, polychaetes, crustaceans, and *Ammodytes*. More than one-third of the plaice were infected with nematodes; trematodes and acanthocephalans were rare.

Contains note on the snail *Cepaea hortensis*, 1,727 specimens of which were collected from seven different localities in summers 1949-51. Geographical distribution outside Norway is considered, then the Norwegian localities and the various forms of this species are described. Observations are made on feeding, and plant species listed. This snail's northernmost limit in Norway is 67°25.5' N.

31710. ROTH, H. Trikinosen i Grønland. (Grønlandske selskab. Årsskrift 1950. p. 57-68, illus., map). **Title tr.:** Trichinosis in Greenland.

Contains a review of research work on *Trichinella spiralis* in arctic regions, particularly in Greenland. Tabulated results 1948-1950, of analysis of 1,489 meat samples from 22 species of animals show that the parasite appeared most frequently in dogs (66.5 percent infected), polar bears (27.7 percent) and foxes (1.1 percent), also in walrus (.9 percent), bearded and ringed seal (1.8 and 1.9 percent respectively). The distribution of the disease in Greenland is shown on map (hosts indicated). Counter measures include freezing of meat for consumption down to -9° C. for 10 days, or adequate boiling. Disposal of animal remains is by freezing, boiling, burial, or cremation.

Contains an explanation in popular style, of the present importance of the polar regions and a general description of their nature, with emphasis on the Arctic. The various standard definitions of the Arctic are given in terms of astronomy, history, oceanography, limit of habitability, etc., and are rejected as inadequate. The behavior of the sun and moon within the Arctic Circle and the duration of day, night, and twilight throughout the year at different latitudes are explained. Auroras are described in some detail and a map shows the "aurora belt" of maximum frequency and the area of minimum frequency.

Contains a popular discussion of optical and magnetic phenomena. Refraction and deformation of sun, moon and stars visibility, sound perception, and colors seen in the landscape are dealt with. The psychological effects on men including illusions, mirages, etc., and the movement of the magnetic poles and resulting problems are described. Air temperature at various localities, wind, blizzards, and the importance of proper food and clothing are also discussed.

French expeditions to Greenland 1949-1951.

Contains an account of the air transport and supply of expeditions to the Greenland icecap directed by P.-É. Victor: (1) July-Oct. 1949, (2) summer 1950, (3) winter 1950-51 and summer 1951. Navigation of the aircraft, the packing, parachuting, and free-dropping of supplies and scientific equipment are described in detail, and illustrated; weights, numbers, and content of dropped packages and equipment are listed. The problems of aerial support and their solution are discussed and a French-English glossary of relevant technical terms appended. *Copy seen:* CaMAL.

31716. ROUILLON, GASTON. Transports. (In: Expéditions polaires françaises. Expédition arctique, 1948-1951. Campagne au Groenland 1950; rapports préliminaires, 1952, série scientifique no. 15, p. 117-30, incl. 8 illus. on 3 plates.) *Title tr.:* Transportation.

Contains a chronological summary and description by stages of the transportation of the expedition from Paris to the Greenland inland ice and return, Apr.-Oct. 1950. Weights of scientific and transport equipment are given. The journey and conveying of equipment from the west coast to the Central Station on the icecap are described in some

detail with a discussion of the terrain. On June 7 the scientific sections of the expedition separated to carry out specific programs. An inventory of transport equipment (17 weasels, 23 sledges, 2 laboratory cabins) is given and the equipment taken by each section is listed. The transport section consisted of nine men, a mechanic being assigned to each scientific section using a vehicle. Refueling and dropping of supplies on the inland ice by airplane is briefly described, and convoys between Camp VI and the Central Station, around the Central Station, and from the Central Station to the east coast are discussed. On the return to the west coast some vehicles were abandoned due to weather conditions and the state of the terrain. Brief sections on aerial and land transport are given in conclusion, the latter including an approximate list of kilometers logged by each section of the expedition. **Copy seen:** CaMAI.

Paris, 1947. Actes. Paris, 1948. p. 207-315, plate) **Title tr.:** The shaking tent ceremony among the Mistassini.

Contains detailed description of the ceremony, as observed by the authors in 1946 among this Algonkian tribe living by Lake Mistassini (51° N. 73° W. in northern Quebec): how an individual becomes a divinator (here termed "jongleur"), the construction of the tent, and a performance. The divinator or sorcerer (*mittayo*) calls upon spirits to come down into the tent; they apparently come, sing in an unknown language, the tent trembles and spirits reveal the future. The Mistassini are converts of the Catholic Church although they have preserved much of their ancient faith and in practice are adherents of both religions.

31720. ROWE, ROBERT B. Pegmatitic lithium deposits of Canada. (Economic geology, Nov. 1953. v. 48, no. 7, p. 627)

Contains abstract of a paper presented to the joint meeting of the Society of Economic Geologists and the Geological Society of America, Toronto, Canada, Nov. 9-11, 1953. One of the five pegmatitic lithium deposits of interest occurs in the Yellowknife - Beaulieu region, Mackenzie District. The composition and general appearance of the pegmatites are described for the five localities as a whole. Lithium minerals found in the pegmatites include spodumene (the most important), amblygonite, lepidolite, zinnwaldite, other lithium-bearing micas, lithiophilite, and petalite.

Izvestiĭa, July-Aug. 1953. t. 85, no. 4, p. 373-81, diagrs., tables, 2 fold. col. maps) **Title tr.:** Influence of the distribution of the world's oceans and lands on the air temperature.

Analysis of anomalies of temperature, as a method for investigation of this problem, was applied by Dove (1852), Gorchinskii (1918), Meinardus (1925), and Ershov (1938). On the basis of these sources, supplemented by recent data, the author compiled a new world map of isanomals for January and July, reduced copies of which are attached. The principles of compiling maps and analysis of their contents are discussed. Includes remarks on anomalies of air temperature in arctic regions, e. g. the two cold poles in Yakutia (p. 380).

31724. RUBTSOV, I. A. Tsentry razvitiĭa i puti rasseleniĭa moshek. (Priroda, 1938, no. 7-8, p. 73-83, text maps) **Title tr.:** The development centers and migration routes of the Simuliidae.

Contains a study of the phylogeny of Simuliidae, a family of small nemecorous dipters, the origin of which is traced to the late Mesozoic. Several centers of development, including central and northern Asiatic and North American, are discussed, as are the differentiation of the family and the migration routes. The connection of Siberian fauna with the North American (Alaska and Canada) in the earlier stages of development, and

the exchange of European and Asiatic elements in the later periods is stressed.

RUDBERG, STEN, see Hedberg, O., and others. Botanical investigations of the Páltsa region of northernmost Sweden. 1952. No. 29586.

31726. RUDENKO, SERGEÏ IVANO-VICH, 1885- . Drevnie nakonechniki garpunov Aziatskikh éskimosov. (Akademíá nauk SSSR. Institut étnografii. Trudy, 1947. nov. seriá, t. 2, p. 233-56, 35 illus.) 40 refs. **Title tr.:** Ancient harpoon heads of the Asiatic Eskimos.

Contains description and drawings of some 35 harpoon heads of Eskimo type from the Chukotsk Peninsula, made of bone or ivory, and belonging to the Old Bering Sea and later cultures. Types of the harpoon heads are described; their different parts (shaft socket, lashing slots, lateral barbs, end blade, etc.) and ornamentation, and comparison is made with Eskimo harpoons from the American continent. The age and origin of different types of harpoons are investigated with frequent citation of the works of H. B. Collins, D. Jenness, J. Murdock, Th. Mathiassen and others. The author concludes that all types of Eskimo harpoon heads known from the excavations on Bering Strait and in North America, existed also on the Chukotsk Peninsula. But some extremely archaic forms (fig. 6, 7) not yet found outside the Asiatic continent, are represented in this rather small Asiatic collection. However, some harpoon heads excavated on the Bering Sea islands and in northwestern Alaska represent complicated and greatly differentiated forms which may have developed in the process of a prolonged his-

torical evolution. Eskimo-type harpoon heads have not been found further west than the Chukotsk Peninsula, e. g. the excavations on the Yamal and Kola Peninsulas did not produce a single harpoon head of undoubted Eskimo-like type. **Copy seen:** DLC.

31727. RUDENKO, SERGEÏ IVANO-VICH, 1885- . Graficheskoe iskusstvo ostfákov i vogulov. (Materialy po étnografii, 1929. t. 4, vyp. 2, p. 13-40, illus., 15 plates) 15 refs. **Title tr.:** The graphic art of the Ostyaks and Voguls.

Contains description and investigation of: znamena, i. e. pictorial signatures of illiterate Ostyaks, found on documents from the mid-17th century, usually representing animals, birds or fish (supposedly family totems); designs tattooed on the arms for decorative or medical purposes; pictographs carved on tree barked by a hunter to indicate his whereabouts; the geometric ornamentation of clothing and utensils. Finally the penoil drawings on paper, encouraged by the author are discussed. The Ostyaks and Voguls have a typical style in representing birds; another interesting motif in their graphic art is a rider representing the son of the god of heaven. Birch bark was used for their picture carving. The materials were collected by the author on his expedition of 1909-1910. **Copy seen:** DSI.

31728. RUDENKO, SERGEÏ IVANO-VICH, 1885- , editor. Ob'iasnitel'nafá zapíska k étnograficheskoí karte Sibiri. Leningrad, 1929. 104 p. (Akademíá nauk SSSR. Komissíá po izucheníu plemennogo sostava naseleníá SSSR i sopredel'nykh stran. Trudy, t. 17) 209 refs. **Title tr.:** Explanatory notes to the ethnographic map of Siberia.

Contains summary accounts of the numbers and localities of 55 ethnic groups, based on censuses of 1897 to 1926, and prepared as a supplement to the Commission's ethnographic map of Siberia (not included in the book). Northern groups included are Zyryans, Ostyaks, Voguls, Samoyeds, Karagas, Soyots, Yakuts, Dolgans, Tungus, Golds, Yeniseians, Yukaghirs, Chukchis, Koryaks, Kamchadals, Gilyaks, Asiatic Eskimos, and Aleuts. **Copy seen:** DLC.

illus.) **Title tr.:** Objects from an Ost-yakian cemetery near Obdorsk.

Contains an account of excavations made by the writer in 1909 in an old burial place at the confluence of the rivers Poluya and Ob' (approx. 66°35' N. 66°32' E.). The graves belong to the Ostyaks of the 17th century, some however, are of more recent date (mid-19th century). All of the bodies buried in shallow graves about 40 cm. deep, had been placed in dug-outs, on their backs, with feet to the North where supposedly the other world is located. Numerous objects were found in the graves: iron axes, knives, arrows, cauldrons and spoons, ornaments, belts, pendants, idols, etc. The objects of bone were rare. Summary in French, p. 2 (supplement). **Copy seen:** DSI.

"Military designs for latrines in winter camps are discussed. Proper site-selection to prevent the pollution of streams and rivers is stressed. The unburnable waste should be covered by ashes and/or snow when the camp is moved."—SIPRE. **Copy seen:** DLC.

31732. RUNE, OLOF. Plant life on serpentines and related rocks in the North of Sweden. Uppsala, Almqvist & Wicksells boktr., 1953. 139 p., 54 illus., 8 plates. (Acta phytogeographica suecica, 31) 154 refs.

Contains descriptions of flora and vegetation on serpentines and other

ultra-basic rocks in northern Sweden, arranged by districts, including (p. 19-44) Åsele and Lule Lappmark. More than 100 flowering plants (four varieties new) and about 50 species of mosses and lichens (some native to Swedish Lapland) are listed. General characters of the serpentine flora are discussed; flora of other, mainly northern, serpentine areas outside Sweden (Norway, Finland and Gaspé Peninsula in North America) are reviewed briefly, as are flora of different kinds of magnesian rocks and specific minerals. Data are given on serpentine soil and its effect on plant life (chemical and mechanical analyses). Index of Latin names is appended.

31737. RYDER, THEODORE. Compilation and study of ice thicknesses in the Northern Hemisphere, 1952-1953. New York, American Geographical Society, 1953. 2 v: 20, lxp., map, 59 graphs; 59, 26 p. (Contract DA-19-016-ENG-2312) 566 refs.

"Ice-thickness data on rivers and lakes in the U. S., Canada and environs were compiled from the literature. A number of annual ice-thickness curves for one or two yr. as well as snow-depth data are given for 53 stations in the U. S., Canada and Alaska [including the following arctic stations: Nome, Bethel, and Fairbanks, Alaska; Lewes River, Yukon Territory; Port Radium, Mackenzie District; Arctic Bay, northern Baffin Island; Nottingham Island in Hudson Strait; Stupart Bay on Ungava Peninsula, northern Quebec; Port Burwell, northernmost Labrador]. Six average ice-thickness curves are also given for smaller geographical regions. The appended bibliography contains 566 references, some with brief annotations. Of these, 186 references to books, reports, articles, manuscripts and bibliographies yielded data on ice thickness or break-up and freeze-up data on lakes and rivers; 275 references are listed on fresh-water ice conditions in Europe and Asia. *Supplement A* contains ice thickness tabulations for six stations in Alaska, 38 in Canada and 41 in the U. S. *Supplement B* contains tabulations for 11 stations in Canada, three in Newfoundland and three in Greenland."—SIPRE.

31738. RYLES, C. S. Trench-foot. (In: Inter-Allied Conferences on War Medicine, London, 1942-1945, pub. 1947. p. 143-45)

Contains information and data on trench-foot in World War I and II; its causes, preventive measures, clothing, instructions for armed forces entering waterlogged areas, and discipline; formulae for foot soap and foot powder.

Copy seen: DLC.

31739. RYLOV, VIACHESLAV MIKHAILOVICH, 1889-1942. Rakobraznye, t. 3, vyp. 3. Cyclopoida presnykh vod. Moskva-Leningrad, Izd-vo Akad. nauk, 1948. 318 p. illus. (79 fig.). (In: Fauna SSSR. Crustacea, t. 3, no. 3.

(Nov. ser. no. 35)) about 250 refs. **Title tr.:** Crustaceans. Fresh-water Cyclopoida.

Contains a morphological and anatomical sketch of fresh-water crustaceans of the fam. Cyclopidae (p. 17-49); metamorphosis and cycle of the development, classification, geographic distribution and history of this fauna (p. 49-87); its biology (p. 87-107); economic importance, as intermediary hosts of various parasitic worms and as food of fishes (p. 107-117); bibliography. In the systematic part (p. 127-312) are keys to the subfamilies, genera and species, and an enumeration of all known species and varieties (over 100) with synonyms, descriptions (males and females), and data on the biology and geographic distribution. Many species native to water basins of northern European Russia and Siberia are included. This is a posthumous publication, and the text is preceded (p. 3-10) by a biographical sketch of the author and a bibliography of his works, prepared by V. I. Zhadin.

Contains a key to and description of ten forms of this group of flies. One of them *Lasiopleura shewelli*, n. sp. is re-

ported from Hay River, Mackenzie District, among other localities.

Copy seen: DLC.

31746. SACK, GEORG. Beitrag zur vasculären Purpura und ein neuer Vorschlag zur Behandlung. (Deutsches Archiv für klinische Medizin, 1939. Bd. 185, Heft 2, p. 186-91) 10 refs. **Title tr.:** A contribution to vascular purpura and a new method of treatment.

Contains presentation of a case of vascular purpura caused by cold. The role of low temperature in the etiology of this syndrome is discussed. Intravenous administration of Melubrin proved very effective.

Copy seen: DLC; DSG.

31747. SACKS, JEROME GERALD, 1915- . Psychologic reactions to winter arctic conditions. (U. S. Armed Forces medical journal, Feb. 1951. v. 2, no. 2, p. 309-313)

Contains observations on an Army Medical Test Team which spent two months of the winter of 1948-49 in an arctic area. The soldiers, none of whom had previously experienced severe cold, made few complaints as to the direct effect of cold; the complaints were rather on such indirect effects as the adverse affects on motor vehicles, machinery and tools, which made working difficult; the lack of recreational activities and adequate housing, complaints mitigated by knowledge that the arctic sojourn was to be brief and by the good example of the officers. The cold was important from a psychological standpoint primarily because it intensified the isolation. Men who excelled, and those who proved inadequate under arctic conditions, were those who had performed similarly under normal conditions. Emotional problems among soldiers under arctic field conditions do not appear different from those encountered under other climatic extremes.

31749. SAFFORD, FRANK K., Jr., and M. B. NATHANSON. Clinical observations on tissue temperatures; pathologic and therapeutic effects. (Archives of surgery, 1944. v. 49, p. 12-22, 10 tables) 42 refs.

Contains a report of a study to determine the optimum temperatures necessary for satisfactory refrigeration anesthesia, the duration of cooling required to obtain these temperatures and the minimum temperature not injurious to the tissues. Cutaneous temperatures of 40°-50° F. and deep muscle temperatures of 45°-65° F. gave satisfactory results, the best refrigeration anesthesia being obtained at slightly lower temperatures. It took three hours to obtain these levels and two hours when a tourniquet was applied, in addition. Tissue temperature of 50° F. for more than 12 hours may cause damage, when factors like certain circulatory obstructions, slight pressure, etc., are present.

31756. SALAZKIN, A. K. D. Nosilov i severnye narodnosti. (Permskii kraevedcheskii sbornik, 1927. vyp. 3, p. 118-20) **Title tr.:** K. D. Nosilov and the northern nationalities.

Contains biographical sketch of Konstantin Dmitrievich Nosilov, 1858-1923, outstanding Russian ethnographer, who studied the natives of the Ob' and Pechora: Ostyaks, Voguls and Samoyeds. He explored the arctic coast of European Russia and northwestern Siberia, and participated in expeditions to Yamal Peninsula and Novaya Zemlya, etc. His published works are listed here and briefly reviewed. **Copy seen:** DLC.

31757. SALAZKIN, A. S. Estestvennye kormovye ugod'ia Murmanskogo okruga. (Sovetskoe olenovodstvo, 1934. vyp. 1, p. 9-66, map, tables) 51 refs. **Title tr.:** The natural grazing lands of Murmansk Province.

Contains (p. 9-15) general geographic and economic information on Kola Peninsula: its area, climate, population, industry, agriculture; sketch of the geology, surface structure, soils and a general characterization of the vegetation cover. Then follows phytogeographic characterization of 13 types of grazing ground, and (p. 32-50) description, with map, of 16 pasture regions on the peninsula. The forage potential is summarized in terms of the administrative districts. The fodder resources are stated to be considerable but not more than one quarter currently exploited. Podsol and peat bog soil types predominate. The northern section of the peninsula is tundra zone, the south and southwest, forest zone. A wide distribution of lichen and considerable swampi-

ness characterize the region, which is not rich in meadow lands. Index of plant species at end of volume. Summary in English.

Trudy, vyp. 75) **Title tr.:** The Indigirka Expedition of 1926, vol. 1. Astronomical and topographic work.

Contains the results of the authors' exploration for the Geological Committee of U.S.S.R., of the eastern part of the Verkhovansk Range and the upper course of Indigirka River in northeastern Yakutia. The expedition discovered a lofty range more than 1,000 km. long and 200 km. wide, crossing the central part of the Indigirka-Kolyma region about 65°-66° N. 140°-144° E. These mountains, exceeding in height all those of northern Siberia, were named the Cherskiy Range in honor of I. D. Cherskiy, an explorer of Yakutia. These results of the expedition comprise a report on the geodetic survey carried out by K. Salishchev (p. 6-32); his account of the methods of calculating the cartographic projections (p. 33-44); explanatory notes to the map by both explorers (p. 45-49); Obruchev's report on the data collected by the expedition (p. 40-55); a list of 195 elevations established. Appended is a sketch map of the upper Kolyma River system and a detailed map of the Indigirka basin, scale 1:1,000,000 showing rivers, elevations, settlements, groups of nomadic Yakuts, trails, the expedition's track and that of Cherskiy in 1891-92 (see *Arctic Bibliography*, No. 3105-3106). *Contains a geobotanical sketch of the winter reindeer pastures around the Pechora estuary (67°39' N.) based on the investigation of the author and O. F. Gase in Sept. of 1927; with data on climatic and edaphic factors, genesis of the vegetation and descriptions of various plant associations, typical plants are listed for each habitat, and a survey given (p. 162-64) of all plants mentioned in the paper, including 52 flowering plants, 24 mosses and an annotated list of 27 lichens. Summary in German. **Copy seen:** Microfilm in CaMAI and DLC, from Dr. Eric Hultén's copy.*

31774. SAMBUK, FEODOSII VIKTOROVICH, 1900- . Kormovye ugod'ia tundr Nenetskogo okruga Severnogo Kraia. (Sovetskoe olenevodstvo, 1934. Vyp. 1, p. 67-98, map, tables) 29 refs. **Title tr.:** Grazing lands in the tundras

of Nenetski district of the Northern Region.

Contains a description of the tundra zone of this district along the northern coast of Arkhangel'skaya Oblast' from Kanin Peninsula on the west to Pay Khoy on the east. It is divided into 24 natural regions (map p. 74), and each is characterized as to climate, land forms, soils and vegetation. The latter is classified into 14 principal types and each described, noting predominant plant species, and forage crop. The reindeer capacity of the winter pastures is estimated at 300,000 head, of the summer pastures, 1,010,000 head. Tabular data on type of grazing lands, feed resources and reindeer capacity are given for various tundra areas, such as Kanin, Timan, Bol'shezemel'skaya, and Malozemel'skaya Tundras. Index of plant species at end of volume. Summary in English.

31775. SAMKO, K. P. O poezdke s éntomologicheskoi tsel'iu letom 1928 g. na reku Shchuch'iu Tobol'skogo Severa. (Tobol'sk. Muzel. Obschestvo izucheniia kraia pri Muzei Tobol'skogo severa. Bülleten' 1928, no. 3, (4), p. 7-12) **Title tr.:** On an entomological trip to the Shchuchya River in northern section of the Tobol'sk region.

Contains a general account of the trip sponsored by Zoological Museum of the Academy of Sciences U.S.S.R., from Tobol'sk to Obdorsk (now Salekhard) and Shchuch'ya River (southern limit of the Yamal Peninsula); with some meteorological data (temperature, atmospheric pressure, wind), entomological notes, and a list of 16 birds obtained during the journey.

Copy seen: NN.

31776. SAMKO, K. P. Zametki o skakunakh i zhuzheli'sakh (Coleoptera, Cicindelidae et Carabidae) Tobol'skoi fauny. (Tobol'sk. Muzel. Obschestvo izucheniia kraia pri Muzei Tobol'skogo severa. Bülleten', 1930. no. 2, p. 23-25) **Title tr.:** Notes on tiger and ground beetles (Coleoptera, Cicindelidae et Carabidae) of the Tobol'sk fauna.

Contains a list of ten species of tiger and ground beetles, with localities and data on habitat; includes a few species from the Obdorsk region.

Copy seen: NN.

31777. SAMOILOVICH, G. G. Noveye metody (aviometody) dlia izucheniia geograficheskogo rasprostraneniia lesov. (In:

Vsesofuznyi geograficheskii s"ezd. 2d, Leningrad, 1947. Trudy, 1948, t. 2, p. 436-42, 2 fold. maps) *Title tr.*: New methods (aviomethods) for investigation of geographical extension of forests.

The significance of visual aerial survey is discussed and illustrated by its results in locating the northern forest limits in the Ob' and Lena basins, also in investigations elsewhere in the U. S. S. R. Two schematic maps, scale ca. 1:1,000,000 (inserted between p. 456-57) show cedar and pine growth in the Ob' in the Yamal forest kolkhoz on the lower tributaries of the Ob' (64°30'-66°20' N).

31778. SAMUEL, S. Erstarrung und Entzündung. (Virchows Archiv für pathologische Anatomie und Physiologie und für klinische Medizin, 1868. Bd. 43, Heft 4, p. 552-58) *Title tr.*: Freezing and inflammation.

Contains an account of experiments with rabbits' ears, apparently the first ones on artificial frostbite. Both macro- and microscopic findings are reported and the vascular and blood changes taking place during freezing and thawing, stressed. Inflammation, and gangrene, resulting from freezing are also described, and compared with those from other injuries. The main role of circulatory disturbances in cold injury, is pointed out.

Copy seen: DSG.

31779. SAMUELSON, ANNA. Cold weather effects on circulation. (Hygeia, Dec. 1946. v. 24, p. 896-97, 951, illus.)

Contains a popular article on the injurious effects of cold on peripheral circulation and blood vessels; on cold lesions, frostbite, Raynaud's disease, cold allergies, prevention of cold injuries, etc.

31780. SANDBERG, BÖRJE, 1906- . Suomi ja suomalaiset; Finland and the Finns. [4. painos. Helsinki] Kustannusosakeyhtiö Otava [1947]. 96 p. of illus.

Contains photographs with explanatory notes in Finnish, Swedish, English and French, on important cities, buildings, personages, scenery, people at work and leisure; etc. Includes the arctic region, its forests and timber industries, fishing, reindeer breeding, life of the Lapps, etc.

Copy seen: DLC.

SANDBERG, G., see Qvigstad, J. K., and G. Sandberg. Lappiske eventyr og folkesagn. 1887. No. 31517.

31781. SANDERSON, MARIE. The measurement of evaporation in Canada. (International Geodetic and Geophysical Union. Association of Scientific Hydrology. General Assembly, Brussels, 1951, pub. 1952? t. 3, p. 474-79, illus., diagr., table, graphs) 6 refs.

Contains the results of experiments, by the Ontario Research Foundation and the Meteorological Division, Canadian Dept. of Transport, with the Thornthwaite climatic formula for potential evapotranspiration (water need) at Toronto, Ont., and at Norman Wells, N.W.T. Two evapotranspirometer tanks were installed at Norman Wells in June 1949, and daily measurements taken during July-Aug. 1949 and June 12-Sept. 7, 1950. Results proved that measured evapotranspiration bore a close relationship to evapotranspiration computed by the Thornthwaite formula, and that the formula was therefore a successful means of determining water need at that latitude. The climate was classified as dry, sub-humid, with summer water deficiency.

31782. SANDFORD, KENNETH STUART, 1899- . The geology of Isis Point, North-East Land, Spitsbergen. (Geological Society of London. Proceedings, Mar. 9, 1953. No. 1495, p. xxxvii-xxxviii)

Contains abstract and discussion of a paper presented at a meeting of the Society, Feb. 1953. Isis Point is a rock outcrop on the east coast of Nord-austlandet, consisting of a schist-gneiss complex intruded by granodiorite and diorite, one of the three most easterly outcrops of these rocks in Svalbard. The relation of these rocks to the successive layers of sediments which overlie them to the east is discussed.

Copy seen: DGS.

31783. SANGSTER, A. G. A new approach to sled design. (Arctic circular, Feb. 1953. v. 6, no. 2, p. 18-21). Also pub. (with 2 illus.) in *Canadian army journal* Apr. 1953, v. 7, no. 1, p. 132-35.

Disadvantages of the conventional commercial bobsled in regard to steering and distribution of load are noted; and an improved sled, designed by Canadian Army Development Engineers,

is described. Steering parts, runners, suspension units, platform, critical loadings on stressed components, and suspension factors are noted. The new sled (unladen weight 1364 lbs., and payload 4000 lbs.) will carry, with greater efficiency, a load three times as high as the conventional sled.

31784. SANTUCCI, GASTONE, and others. Indagini sull'apparato cardiovascolare dei congelati. (Minerva medica, Dec. 15, 1940. anno 31, v. 2, no. 50, p. 592-94, illus.) Other authors: D. Bussa and P. F. Antognetti. **Title tr.:** Investigations of the cardiovascular apparatus in frostbite cases.

Contains an account of observations on pulse rate, arterial and venous pressure, rate of circulation, electrocardiogram, etc. in 104 subjects with first- to third-degree frostbite. Four case histories are presented. No injury of the cardiovascular system was found in first- to second-degree frostbite. In third-degree cases oscillometric irregularities were noted, suggesting local, inflammatory hyperemia.

Glavnoe upravlenie gidrometeorologicheskoi sluzhby. Trudy nauchno-issledovatel'skikh uchrezhdeniî, Seria I, Meteorologîa. vyp. 25, Fizika prizemnogo sloa vozdukhâ, 1947, p. 68-86, 9 illus. incl. diagrs., 5 tables) 3 refs.

Title tr.: Some results of stationary observations on wind velocity and air temperature in the air layer near the ground.

Includes (p. 68-73, 82) some data from observations organized by Central Geophysical Observatory in 1943 and carried out at various meteorological stations one of which was Kyusur on the right bank of Lena River in the tundra zone (70°41' N. 127°24' E. altitude 30 m.). Changes in wind velocity at 1-5 m. from the ground, and air temperature gradients 5-150 cm. from ground level as presented for some stations are discussed. Instrumentation, error and observation techniques are described. **Copy seen:** DLC.

31788. SAPOZHNIKOVA, S. A. Teplovî balâns defat'noi poverkhnosti v osnovnykh geograficheskikh zonakh SSSR. (In: Vsesoûznyî geograficheskii

s"ezd. 2d, *Leningrad*, 1948. t. 2, p. 228-39, tables) 20 refs. *Title tr.*: Heat balance of the active soil surface in the principal geographical zones of the U.S.S.R.

"Data on solar and outgoing radiation and albedo are tabulated for 8 zones of the U.S.S.R. from 80°20' N. lat. (Tiksi Bay) to 41°20' N. lat. (Tashkent). The values of heat exchange in soil were calculated with reference to soil moisture, evaporation and turbulent exchange of heat between the soil and the air. The monthly mean albedo at Tiksi Bay and Calm Bay (Tikhaya Bukhta) was 86 percent during a winter with a stable snow cover. The albedo diminished to 80 percent in May with the beginning of snow melting."—SIPRE.

Copy seen: DLC.

31789. SAPPER, KARL THEODOR, 1866-1945. Die Anthropogeographische Bedeutung des Renttieres. (*Geographische Zeitschrift*, 1931. Bd. 37, Heft 9, p. 513-25; Heft 10, p. 599-608) *Title tr.*: The anthropo-geographic importance of the reindeer.

Contains an extensively documented account of the reindeer and its importance for northern peoples. The physical characteristics of the animal are outlined: its ability to survive in the arctic climate, its food, causes for seasonal wanderings, its geographic dissemination in the past and present. Hunting techniques are described: attacking as the herd crosses a river, corralling the animals between two converging fences, use of lassos and showshoes, and of the domesticated reindeer as decoy, etc. The problem of domestication is discussed (theories of E. Hahn and G. Hatt); economic importance of the domesticated reindeer: as beast of burden, for riding (among the Tungus, Yukaghirs, Soyots and Karagas, originally probably in imitation of the horse), as a sledge animal (among the Lapps, Samoyeds, Ostyaks and Voguls, Koryaks, and Chukchis, apparently derived from use of the sledge dog. In both wild and domesticated state, the reindeer yields meat and furs as its most important products. The domesticated animal yields milk, with butter and cheese as by-products. Several methods of slaughter are noted for a domesticated reindeer. The taming of the reindeer may be dated from the beginning of the Christian era, and probably originated in the Sayan Mts. region and near Lake Baykal (B. Laufer).

Reindeer herding among the various arctic peoples is described, dogs being used as herders among the Lapps, Samoyeds and the Tungus in the region of the Yeniseysk. Description is given of the modern reindeer industry in Alaska (since 1891) and Labrador (since 1908), and a suggestion made that this animal could be transplanted to some regions in the Antarctic.

31790. SAPPER, KARL THEODOR, 1866-1945. Nachrichten über Zukunftsaussichten der Eskimobevölkerung von Grönland und Labrador. (Petermanns geographische Mitteilungen, 1918. Bd. 64, p. 210-18, tables, diagrs.) *Title tr.*: News on the future prospects for the Eskimo population in Greenland and Labrador.

Contains a discussion of two statements made to the author by A. Stolberg and Morten P. Porsild on population trends: that of West Greenland Eskimos upward in numbers (12,939 in 1915) and, the Labrador Eskimos apparently decreasing in numbers (1,272 in 1905). The high mortality among Eskimos is caused by their poor resistance to infectious diseases brought from outside among ships' crews (the half-breeds have higher immunity), by syphilis (in Labrador), high child mortality, infanticide particularly of females, and the custom of blood revenge (among the Polar Eskimos at Cape York). Finally, reckless extermination of marine animals by commercial fisheries has forced Eskimos to starve. Statistical data are tabulated and remarks of various missionary and scientific workers in the two regions correlated. Some details are given on the Danish Arctic Station at Disko where Stolberg wintered in 1912-13, and of which Dr. Porsild was long director; also on the activities of the Herrnhuters, Moravian missionaries, in both areas discussed here.

31810. SCHAUB, HANS PETER, 1912- . On the Pre-Cambrian to Cambrian sedimentation in NE-Greenland. København, C. A. Reitzel, 1950. 50 p. illus. plate, 2 sketch maps, table. (Meddelelser om Grønland. Bd. 114, nr. 10) 23 refs.

Contains results of stratigraphical investigations on the north coast of Ella Ø (73° N. 25° W.) at Kap Oswald and vicinity, made by the author Nov. 1936-Feb. 1937, during the Danish Expedition to East Greenland. The sequence exposed at Kap Oswald includes limestones of the upper Eleonore Bay formation (Precambrian), the Tømmer Bay group of elastic sediments (including two tillite members indicating glaciation), and an upper limestone group (Lower Cambrian). Detailed description of the rocks and conditions of sedimentation is given, with comments on the age and significance of the sequence.

Contains an account on population distribution, exploration and mapping, transportation, weather, etc. Beginnings and development of air transport and mapping, types of air transport, advances into the Arctic during World War II, arctic airfields, transpolar flights, weather stations, etc., are considered, as well as Canadian airlines, their routes and connections; number of planes and turnover; kind of cargo, etc. **Copy seen:** DLC.

31817. SCHELL, IRVING ISRAEL, 1906- . On the role of the ice off Iceland in the decadal air temperatures of Iceland, and some other areas. (Inter-national Council for the Study of the Sea. Journal, 1952. v. 18, no. 1, p. 11-36, text map, 6 tables) 34 refs. **Also pub. as:** Woods Hole, Mass. Oceanographic In-stitution. Collected reprints, 1952. Contribution no. 603.

Contains a discussion of the general circulation of the atmosphere, its bearing upon climatic fluctuations, and the role of polar ice in long-period variations in the circulation of the North Atlantic and adjacent areas. As the longest arctic ice records are from Iceland, these are used and compared with long records of air temperatures from Stykkisholm (Iceland), Arkhangel'sk (Arkhangel'skaya Oblast', U.S.S.R., 64°34' N. 40°32' E.), and Vardø (N. Norway, 70°22' N. 31°07' E.). Ice and tempera-ture data are averaged by decades, 1831-1940, shown in tables, and discussed in some detail for each locality. A definite relationship was found between mean decadal ice extremes and the mean tem-peratures for the same decades at the three stations, severe ice off Iceland being accompanied by below average tempera-tures at the three stations, and light ice conditions by above average tempera-tures. In addition, temperatures at the

stations seem to be related to ice condi-tions of the previous decade, showing local persistence of the effects of ice and cold water. The period 1941-1950 is discussed in relation to 1919-1940. The author suggests that while "solar changes may be the basic cause of the variations in the general circulation, they cannot be readily discerned in the temperature fluctuations examined here." **Appendix** gives data showing the possible influence of city development on temperatures at the stations. **Copy seen:** DGS.

31826. SCHLACHTER, W. Ein lap-pisches Kulturdokument. (Ungarische Jahrbücher, 1941. Bd. 21, Heft 1-3, p. 251-58) **Title tr.:** A Lapp cultural document.

Contains discussion of the process of civilization among the Lapps, and an extensive evaluation of the paintings of the native Lapp artist, Nils Nilsson Skum, published in his book *Same silt* (see Arctic Bibliography, No. 16202).

Copy seen: DLC.

31827. SCHMID, F. Le group de Chilostigma (Trichopt., Linnoph.). (Archiv für Hydrobiologie, 1952. Bd. 47, Heft 1, p. 75-163, illus.) **Title tr.:** The Chilostigma group (Trichopt., Linnoph.)

Contains a critical revision of caddis flies of the group Chilotigma of the fam. Limnophilidae, with characteristics of this group and its subgroups and descriptions of 27 species, including diagnoses of two new species, synonyms, critical notes and data on distribution. At least five species are recorded as native to Alaska, Mackenzie District, Baffin Island, Greenland and northern Siberia (up to 70°21' N. lat.). **Copy seen:** MH-Z.

31828. SCHMIDT, HENRI. Recherches histopathologiques de l'action du froid sur les tissus de la cavité buccale. (Schweizerische Monatsschrift für Zahnheilkunde, Aug. 1925. Bd. 35, no. 8, p. 349-77, 2 illus.) 16 refs. **Title tr.:** Histo-pathological investigations on the action of cold upon the tissues of the buccal cavity.

Contains a report of an investigation on the macro- and microscopic changes in the lips, tongue and teeth of rats, following exposure(s) to temperatures of -60° to -70° C. The changes in the mucosae were similar to those observed in the skin: circulatory disorders, hyperemia, hemorrhages, swelling with leucocytic and lymphocytic infiltration, necrosis. In and around the tooth, hyperemia, hemorrhages, formation of vacuoles in the pulp, and of secondary dentine, were observed. Regeneration after these injuries is also discussed.

31830. SCHMIDT, WILHELM, 1868-1954. The Central-Algonkin floodmyth. (International Congress of Americanists. 28th, Paris, 1947. Actes. Paris, 1948. p. 317-19)

Contains a discussion on the myth of the Great Hare, the trickster; and of the great flood, an animal diving for earth.

In the northern group of Algonkians, comprising the Cree, the Great Hare is a trickster and the benevolent protector of animals, especially of those hunted by man. The author stresses that the whole question of the flood-myth and its Culture Hero is a highly complicated one.

Copy seen: DLC.

31831. SCHMIDT, WILHELM, 1868-1954. Das Nationalepos der Jakuten. (Saeculum, 1951. Bd. 2, Heft 4, p. 473-516) **Title tr.:** The national epos of the Yakuts.

Contains analysis of Yakut heroic songs, based on texts published by A. T. Middendorff, V. L. Priklonskii, and N. Gorokhov (see *Arctic Bibliography*, No. 11369, 13946). The songs are investigated from a literary and religio-historical approach. The author finds three types (western, eastern, and mixed) of epic songs on the same theme: the divine origin of the first man, or first Yakut; his fight with a demonic adversary; and winning a bride. The western type (Middendorff's version) is considered the most ancient and pure. The hero is son of the highest god Ar Toyon and the first man on the earth. In the eastern type of songs the hero is also of heavenly origin and is the first Yakut. In both types the hero must fight with a demonic adversary for a bride. The mixed type shows the influence of shamanistic ideology, and the hero has a sister. The epos was created at a time when the Yakuts lived further to the south, probably in the region of Altay and Abakan. **Copy seen:** DLC.

31832. SCHMIDT, WILHELM, 1868-1954. Zu den Anfängen der Herdentierzucht. (Zeitschrift für Ethnologie, 1951. Bd. 76, Heft 1, p. 1-41) 50 refs. **Title tr.:** The beginning of animal husbandry.

Contains an ethnological study as to the original domestication of various animals: reindeer, horse, sheep, goat, camel and cattle. The creation myths of Samoyedic reindeer breeders, the origin of domesticated reindeer, the Samoyedic Soyots as the oldest reindeer breeders, the transition from reindeer-hunting to -breeding, the question of the chronological priority of the domestication of reindeer to that of the horse (p. 7-16), are discussed in turn. The relatively late development of horse-breeding among the Yakuts (p. 19-20), the lack of proof of yak- and cattle-breeding among the Yeniseians (p. 31-32), and other problems are noted. Considerable

attention is paid to the relationship between mythology and economic forms of life. References are made to the Paleo-Siberian, Finno-Ugric, Ural-Altaic and other Asiatic peoples.

31833. SCHMITT, ALFRED, 1888-. Die Alaska-Schrift und ihre Schriftgeschichtliche Bedeutung. Marburg, Simons, 1951. 200 p. [16] p. (illus.) (Münstersche Forschungen. Heft 4) *Title tr.*: The Alaskan writing and its importance for history of writing.

Contains history and analysis of a kind of writing invented by the Eskimos at the Kuskokwim Moravian mission station around 1900. The chief inventor was the Eskimo, Neek (native name Uyakoo), born around 1860, a shaman before his conversion. He and the other natives at the mission station took to writing in imitation of the white missionaries, invented symbols for whole words and "wrote" from memory, stories from the Bible. Later they developed another system based on notation of sounds. An appendix (p. 172-77) investigates the pictographs of the Kotzebue Eskimos, based on material published in H. D. Anderson and W. C. Eells *Alaska natives*, 1935 (*Arctic Bibliography*, No. 434).

This book is an abridgement (with emphasis on Alaskan material) of a two-volume *Untersuchungen zur Geschichte der Schrift*, Leipzig, 1940. (*Arctic Bibliography*, No. 15497). It had been written by the author and Rev. John Hinz who

had lived among the Eskimos and knew their language. But the edition was largely destroyed in the publisher's warehouse during an air raid in World War II.

31841. SCHOLANDER, PER FREDRIK, 1905- , and others. Studies on the physiology of frozen plants and animals in the Arctic. Experimental work conducted at the Arctic Research Laboratory, Point Barrow, Alaska. Philadelphia, 1953. 56 p. 12 illus., 10 tables. (Journal of cellular and comparative physiology, Sept. 1953. v. 42, suppl. 1) 92 refs.

Contains a quantitative study of some physiological processes in frozen arctic plants and animals (chiefly respiratory gas exchange), and an account of cold survival experiments. Most of the plants, and the chironomid larvae examined were found dehydrated when frozen; the larvae could be repeatedly thawed and refrozen without injury; parts of cold-hardy lichens and twigs of shrubs and trees respired after being subjected to -183° C., but the vascular plants could not produce or develop leaves. Total or extensive freezing of the Alaska blackfish (*Dallia pectoralis*) was fatal. The physical or physiological factors underlying some of the phenomena are discussed.

31844. SCHRICKER, JOHN ADAMS, and others. B vitamin content of rat adrenals with respect to exposure to cold. (Society for Experimental Biology and Medicine. Proceedings, 1951. v. 78, p. 522-24, table) 9 refs. *Other authors:* R. Hertz, and W. W. Tullner.

Contains a report of an investigation on vitamin content of the adrenals of female rats exposed to cold. Vitamin C became highly depleted, but biotin, folic acid, niacin and riboflavin (B-vitamins) were not materially altered.

Copy seen: DLC; DSG.

31845. SCHÜMMELFEDER, NORBERT. Untersuchungen über Cholinesterase im Blut nach experimentellen Schädigungen. II. Mitteilung. Das Verhalten der Cholinesterase in Vollblut und Serum bei experimenteller Erfrierung. (Naunyn-Schmiedeberg's Archiv für experimentelle Pathologie und Pharmakologie, 1947. Bd. 204, Heft 4-5, p. 466-72, 3 illus.) 14 refs. *Title tr.*: Investigations on blood-cholinesterase fol-

lowing experimental lesions. II. Cholinesterase of whole blood and serum in experimental frostbite.

Contains report of an investigation on cholinesterase activity during and after severe cold injury in dogs. Results were not uniform; in the majority of cases there was an increased activity in the blood and a reduced one in the serum of the frozen region. The possible underlying mechanism is discussed.

Copy seen: DSG.

31846. SCHÜRER, F. von. Periarterielle Sympathektomie bei schwerer Erfrierung. (Zentralblatt für Chirurgie, Mar. 21, 1942. Jahrg. 69, Nr. 12, p. 486-90, 2 fig.) *Title tr.*: Periarterial sympathectomy in severe frostbite.

Contains an account on sympathectomies performed in 22 cases of severe frostbite, two to six days after injury, with three brief case histories. In cases of bilateral injuries, one side was often left unoperated, as control. The results suggest early intervention. Climatic and medical conditions on the Eastern front during the winter of 1941 are also dealt with.

Copy seen: DSG.

31847. SCHÜRER, F. von. Periarterielle Sympathektomie bei schwerer Erfrierung. (Zentralblatt für Chirurgie, Nov. 7, 1942. Jahrg. 69, Nr. 45, p. 1797-1801) *Title tr.*: Periarterial sympathectomy in severe frostbite.

Contains presentation of a case of severe frostbite of both hands and feet with sympathectomy performed on the right side, the other serving as control. Considerable improvement was noted on operated side and minimal amputation required; untreated extremities developed extensive wet gangrene and had to be amputated. This report is a supplement to the item above.

Contains notes on frostbite sequels involving the skin, especially its blood vessels; similarities of these injuries with those produced by X-rays, radium, etc.; their therapy; prevention of sweating, etc.

Copy seen: DSG.

31851. SCHULZ, BRUNO, 1888-. Bericht über die Fortschritte der Ozeanographie, 1929-32. (Geographisches Jahrbuch, 1933. Bd. 48, p. 244-301) **Title tr.:** Report on the progress in oceanography, 1929-32.

Includes (p. 297-300) brief survey of investigations and list of publications on the Barents Sea, the north polar basin and seas along the north Siberian coast.

Copy seen: DLC.

31852. SCHULZE, WERNER. Experimentelle Beiträge zum Erfrierungsproblem. (Archiv für Dermatologie und Syphilis, Jan. 15, 1943. Bd. 184, p. 61-65, illus.) **Title tr.:** Experimental contributions to the problem of frostbite.

Contains an account of a series of perfusion experiments made on frost-bitten ears of rabbits before the onset of stasis. Adrenaline, vasodilators, and papaverine were tested as to their effects; also some problems of metabolism and pathology were investigated.

Copy seen: DSG.

31853. SCHULZE, WERNER. Über den Einfluss des Rauchens auf die periphere Durchblutung bei lokaler Kälteeinwirkung. (Klinische Wochenschrift, Sept. 15, 1947. Jahrg. 24-25, Heft 47-48, p. 738-42, 4 fig.) 6 refs. **Title tr.:** On the influence of smoking on peripheral circulation during local cooling.

Contains an account of experiments with 12 subjects which normally exhibited a varying degree of reaction to tobacco. Local application of cold (-4° C.) abolished vasoconstriction whenever it was present due to nicotine effect. Previous administration of alcohol also abolished the effect of smoking both in normal and cooled hands. Generally, the effect of smoking was much weaker than anticipated.

Copy seen: DSG.

31854. SCHULZE, WERNER. Untersuchungen über den Einfluss der Alkohols auf die periphere Durchblutung bei lokaler Kälteeinwirkung. (Klinische Wochenschrift, Aug. 1, 1947. Jahrg. 24-25, Heft 41-42, p. 646-54, 10 fig.) 5 refs. **Title tr.:** Investigations on the influence of alcohol on peripheral circulation during local cooling.

Contains a study on 25 subjects exposed to temperatures of -2° C. and -16° C. Alcohol in relatively high doses (60-70 cem.) causes a prolonged vasodilation in the exposed skin and thus offers protection against local cold injury. The vessels of the hands react much better than those of the feet. The effect of the alcohol is to a large degree dependent on the activity of the thermal center. The prophylactic and therapeutic value of alcohol in local frostbite is discussed.

Title tr.: Analysis of the standard deviation of atmospheric pressure over the Northern Hemisphere.

"In this study the standard deviation of daily pressure (u) rather than the mean pressure is analyzed and shown in tables and charts. Values were computed for coordinates throughout the hemisphere based on data for 1929-1938 furnished by the U. S. Weather Bureau. Isolines of u are drawn for each season, showing the effect of the Aleutian and Icelandic Lows in the fall, winter and spring, and the weak polar Low in summer. The standard deviation (v) of mean monthly pressure is similarly computed, but for 1900-1938. Relation between u and v is also analyzed and found to be very close. It is stated that the deviations are greater on the oceans than the continents, and on the west coasts than the east coasts of the continents, due to the damping effect of friction over the continents on the large scale turbulence which is responsible for fluctuations in pressure from day to day or month to month. However, a close examination of the charts shows that this is true only over the con-

tinent of Eurasia, and to some extent in 'the arctic regions of America... The deviations in the three major centers of high values (Aleutians, Iceland and the Barents-Kara Sea) are not appreciably different in magnitude, except in the last named area which shows consistently lower standard deviations."—*Meteorological abstracts and bibliography*, Feb. 1953. v. 4, no. 2, p. 125.

31862. SCOTT, JAMES BROWN. Arctic explorations and international law. (American journal of international law, Oct. 1909. v. 3, no. 4, p. 928-41)

Summary of the main arctic expeditions, occasioned by reports of the discovery of the North Pole by F. A. Cook and Robert A. Peary; with emphasis on the aims and achievements of these arctic explorations in relation to the problems of international law. Conclusion is reached that mere discovery of arctic territory confers no title to its possession upon the explorer's country. Unless the territory is effectively occupied, it is to be regarded as a *terra nullius*, as was Svalbard at that time.

Copy seen: DLC.

31863. SCOTT, JAMES MAURICE. Portrait of an ice cap, with human figures. London, Chatto and Windus, 1953. 173 p. plates.

Contains a narrative of the British Arctic Air Route Expedition, 1930-31, by a member of the party. Fourteen men led by Gino Watkins carried out mapping by boat and aerial photography and set up a weather station on the Greenland icecap which was manned from December throughout the winter by Augustine Courtauld. Attempts to relieve Courtauld began in March from the base station, but were unsuccessful until May 5. The narrative is based upon diaries kept by members of the expedition; passages from them make up the major portion of the book. Brief mention is made of the German expedition of the same year (Deutsche Grönland-Expedition, Alfred Wegener, 1930-31). Following the relief of the Ice Cap Station, three members of the party made a 600-mile open-boat journey down the east coast and around the southern point of Greenland. Operations in Greenland during World War II are very briefly described. Photographs were taken mainly by members of the expedition. *See also* Arctic Bibliography, No. 2982.

SCOTT, JOHN CULBERTSON, 1900- . No. 25995, erroneously accredited to James C. W. Scott.

31864. SCOTT, RICHARD. Trouble in northern waters. (Geographical magazine, Feb. 1953. v. 25, no. 10, p. 483-88, illus., text map)

Contains discussion of the fishing dispute between Britain and Norway, and Britain and Iceland. British trawlers began fishing off Finnmark (northernmost Norway) about 1909. Disputes arose over Norway's claim to a four-mile rather than three-mile coastal limit and over manner in which the limit was drawn. Discussions were held in 1924, 1925 and 1933. A Norwegian Royal Decree of 1935 defining the fishing area was upheld by the International Court in 1951. Similar disputes with Iceland are noted. **Copy seen:** DLC.

31865. SCOTT, ROBERT F. Distribution and abundance of Dall sheep in Alaska. (*In: Alaskan Science Conference . . . 1951, Proceedings, pub. 1953, p. 340-43*) 3 refs.

Contains report based on aerial census made in 1950, under auspices of the U. S. Fish and Wildlife Service and the Arctic Institute of North America. Past distribution, present range and abundance, factors determining distribution (winter food, protection by terrain), diffusion, mobility, taxonomic differences, population trends are discussed. This animal is considered to be distributed now to the full extent of its potential range in Alaska, and is increasing in abundance.

31868. SEABORG, H. J. Astronomic azimuths in Alaska and Canada. (Surveying and mapping, Apr.-June 1948. v. 8, no. 2, p. 50-58, illus., text map, table)

Contains a report on methods and procedures used in a survey which made "precise astronomic determinations of the azimuth of a number of lines along the chain of triangulation figures" in Alaska and Yukon Territory, Canada. The Bamberg broken-telescope transit used for observations is described in detail, and the procedures in making observations and preliminary computations are discussed. "Over a period of several years on this project an average of seven stations were observed during the six months' stay in the field." Map shows triangulation areas and location of Laplace stations in Alaska and the Yukon, and table gives "Deflections of the vertical and astronomic azimuths" for 22 stations.

31869. SEALANDER, JOHN A. Body temperatures of white-footed mice in relation to environmental temperature and heat and cold stress. (Biological bulletin, Feb. 1953. v. 104, no. 1, p. 87-99, illus. tables) 59 refs.

Contains a study of behavior responses, of core and skin temperatures in *Peromyscus leucopus* subjected to ambient temperatures of -35°C . to $+50^{\circ}\text{C}$. At low temperature the animals responded with gnawing, grooming, running, rapid breathing and shivering; motor activity ceased almost entirely at -20° to

-35° C. Lowest recoverable body temperature was 10° C.; the mean lower lethal body temperature was 4.6°+0.5° C. Body temperatures of mice supplied with food and water remained rather constant when subjected to cold, except at temperatures around -30° C. Without food and water, all animals became hypothermic within 12 hours at all temperatures below -1° C.

31873. SEELEY, WILLIAM L. Factors in the design and construction of Alaskan airfields. (Association of Asphalt Paving Technologists. Proceedings, Apr. 1948. v. 17, p. 161-73, illus.)

"The climate and geology of Alaska and the characteristics of permafrost in that area are briefly described. General considerations are presented for the design of airport grades, subgrades and drainage. Drain ditches in permafrost areas should be excavated below the center line grades to at least the depth of the active layer (6-8 ft.). Ordinary corrugated drain pipes are almost useless at freezing temperatures unless small steam pipes are used inside them. Any major paving operation in Alaska where asphalt emulsion is to be used requires an emulsion plant at the site as freezing breaks emulsion and renders it useless where no dehydration and reprocessing plant is available."—SIPRE.

31876. SELJANINOV, G. T., and others. Mirovoj agro-klimaticheskij spravocnik. Leningrad, Gidromet. Izdat., 1937. 418 p. illus. tables (Agro-Hydrometeorological Institute) 251+56 refs. **Title tr.:** Agroclimatic handbook of the world. **Other authors:** I. A. Gol'fberg, and K. I. Chepega.

"This important handbook has been prepared by the Agro-Hydrometeorological Institute (AGMI) under supervision of Prof. G. T. Seljaninov. The methods for selecting the agricultural characteristics of climate and for the classification of the world's agroclimatic zones are discussed by G. T. Seljaninov (p. 5-49). I. A. Gol'fberg explains the composition of the book in general. The authors pay special attention to the problem of frost and its distribution. Frost is classified into five groups . . . (4) the polar zone, with night frosts occurring throughout the year even in summer; (5) the arctic zone with air temperatures below freezing point during the whole year. Collection of the world's material on frosts and its preparation for print has been made under the supervision of K. I. Chepega. Complete agroclimatic data from more than two thousand stations, covering the whole globe, and based on long period observations (usually more than 25 years) are given in the first part of tables. These tables contain mean air temperatures of the warmest and coldest months, absolute and mean minimum of air temperature, annual amount of precipitation and duration of the frost-free and dry periods (mean and extreme data), characteristics of frost frequency and duration with air temperature above 5°, 10° and 15° C. Monthly and annual data of air temperature, precipitation, mean relative humidity, mean cloudiness and mean sunshine duration are presented in the next part of tables."—*Meteorological abstracts and bibliography*, Mar. 1953. v. 4, no. 3, p. 371.

Many tug captains towing timber rafts use advanced methods of work and increase the speed and load. The large rafts, of 50-60 thousand cu. m. timber towed regularly at high speed on the Yenisey and Severnaya Dvina are mentioned with the names of the tugs and their captains. **Copy seen:** DLC.

31879. SELLERS, EDWARD ALEXANDER 1916-, and others. Acclimatization to cold; natural and artificial. (American journal of physiology, Dec. 1951. v. 167, no. 3, p. 644-50, 2 fig.) 5 refs. **Other authors:** S. Reichman, and N. Thomas.

Contains an account of two series of experiments with rats, aimed to elucidate the adaptive processes taking place during acclimatization to cold. The first series showed that the optimal period of exposure to cold required to produce acclimatization, as measured by the survival of clipped animals, was four to six weeks. It also demonstrated that this acclimatization is labile and much decreased when acclimatized rats were kept four days at room temperature. The second series showed that "artificial acclimatization" (produced by administration of drugs or hormones) is not as effective as naturally acquired acclimatization. **Copy seen:** DLC.

31880. SELLERS, EDWARD ALEXANDER, 1916-, and others. Acclimatization to cold in rats: metabolic rates.

(American journal of physiology, Dec. 1951. v. 167, no. 3, p. 651-55, 2 fig.) 11 refs. Other authors: S. Reichman, N. Thomas, and S. S. You.

Contains a report on experiments which demonstrated that clipped rats exposed to a cold environment (1.5° C.) increased their oxygen consumption by 30 percent in three hours as compared with unclipped controls. This rate is not maintained and the animals die within 24 hours from hypothermia. However, in animals previously acclimatized, the elevated metabolic rate is maintained over long periods. The elevated metabolic rate in clipped animals is due, in large part, to greater muscular activity.

Based on descriptions in their heroic songs, the literature, and a diary of J. Jankó who visited Ost-yaks at Demyanka, Irtysh, and Yugon in 1898. The traditional garments were still used by the womenfolk, but the men's clothing was of Russian style. The women's blouses, their robe *kala*, and head-coverings are described. The blouses are richly embroidered in Finnish or Russian patterns (see col. plate), their use of underclothing however, is attributed to Russian influence. The technique of making the blouse fabric from nettles, the use of pearls, beads, and finger rings is described. The older Ostyak clothing for men and women made of reindeer fur and hide, consisted of coats (three worn in winter), a hood, mittens, long boots and ornamented leathern stockings, and a girdle. A *worüp* (G string) was still worn by the women instead of pants.

31900. SHABASHEV, A. M. Vyvozka lesa v khlystakh po traktornoi ledianoi doroge. (Lesnaya promyshlennost', Sept. 1951. t. 11, no. 9, p. 18-22, illus., diagrs.) **Title tr.:** Transportation of logs on the tractor ice road.

When timber is cut, the logs are usually hauled out to a collecting place, cut into lengths, and transported down to a lower collecting place or logging pool, to await processing in the saw mill. A new organization of this work, transporting uncut logs by a tractor ice road from the wood lot directly to the lower collecting place was worked out under the author's direction and tested successfully in winter of 1950-51 by the Yametsk forest industry organization (Iespromkhoz) operating in the Pukshen'ga River basin. The organization of log loading and unloading and transportation by tractor sledge on an ice road is described in detail. The effectiveness of the new method, resulting in 19.5 percent economy in man power, is stressed.

31903. SHAFER, ROBERT. Athapaskan and Sino-Tibetan. (International journal of American linguistics, Jan. 1952. v. 18, no. 1, p. 12-19) 30 refs.

Contains a comparative linguistic investigation of affinities between the Athapaskan and Sino-Tibetan (especially Tibeto-Burmic) languages. The work was carried out according to teaching of Edward Sapir. Some 70 parallel cases are presented with finals (endings) and other features common to both linguistic families. The paper was reviewed by Morris Swadesh in the same journal, July 1952, v. 18, no. 3, p. 178-81, 6 refs. On the whole, Swadesh agrees with Shafer, he makes, however, a few additions and corrections, and gives some concluding statements on the Tlingit and Haida languages, e. g.: Athapaskan languages have had a genetic connection on an earlier level with Tlingit; Eyak may be intermediate between Athapaskan and Tlingit; Tlingit-Athapaskan is more distantly related to Haida, and with it constitutes Sapir's Na-dene stock; still further back in time, the Na-dene stock is linked with Sino-Tibetan; present-day Tlingit and Athapaskan have been diverging from the earlier common Tlingit-Athapaskan for about twenty centuries.

31907. SHAPIRO, A., and L. S. SIMPSON. The effect of a broken icefield on water waves. (American Geophysical Union. Transactions, Feb. 1953. v. 34, no. 1, p. 36-42, diagrs., graphs, formulae) 4 refs.

"Methods of forecasting sea and swell in the open ocean have been given by Sverdrup and Munk and others. In this paper are presented principles from which techniques for forecasting sea and swell in a broken icefield may be developed. It is shown that water waves entering an icefield are damped exponentially with

increasing ice thicknesses. It is further shown that selective damping occurs in the icefield, the shorter-period waves being more easily damped. Graphs are included which help to give a clearer picture of the results."—Author's abstract.

31914. SHARP, ROBERT PHILLIP, 1911- Deformation of bore hole in Malaspina Glacier, Alaska. (Geological Society of America. Bulletin, Jan. 1953. v. 64, p. 97-100 incl. graphs)

"A test site was selected near the center of Malaspina Glacier where theoretically conditions favor extrusion flow. An Al pipe was sunk vertically 1000 ft. by an electrically heated hot point, reaching to 950 ft. above the glacier floor. The pipe orientation was surveyed periodically at 50 ft. intervals by an inclinometer giving reproducible readings accurate to 0°05' and azimuth determinations accurate to 2° or 3°. Deformation of the pipe in one year is shown graphically. Differential flowage occurred only at depths greater than 300 ft. Results are not consistent with Demorest's theory of extrusion flow, but the deformation recorded is as yet too small to permit conclusions as to the method of flowage. Observations in this bore hole will be repeated annually."—SIPRE. A shorter account of this operation, summarizing results and presenting the same graphs is published as "Deformation of a vertical bore hole in a piedmont glacier," Journal of glaciology, Apr. 1953. v. 2, no. 13, p. 182-84.

31916. SHARP, ROBERT PHILLIP. 1911-. Progress report on a test for extrusion flow in the Malaspina Glacier, Alaska. (Geological Society of America. Bulletin, Dec. 1953. v. 64, no. 12, pt. 2, p. 1514)

Contains abstract of a paper presented at the March 1953 meeting of the Society, Stanford Univ., Calif. In 1951, a hole was bored in the glacier to 1,000 ft.; a resurvey in 1952 recorded deformation. Results (which are given) suggest that the surface ice is carried along by the flowing ice beneath, and throw doubt on the validity of the extrusion flow concept.

31917. SHATILOV, M. B. Ostiâko-samoedy i tungusy Primarynskogo raiona; putevye zametki. (Tomsk. Tomskil kraevoi muzei. Trudy, 1927. t. 1, p. 138-167) 7 refs. **Title tr.:** Ostyak Samoyeds and Tungus in the region around Narym; a traveler's notes.

Contains account of the author's trip of about four weeks in Aug. 1924, collecting ethnographical objects for the Tomsk Museum. He visited the Ostyak Samoyeds at Pyzhiny on the Ob' (between Narym and the Vasyugan River), decimated by the typhus epidemic of 1920, and describes their material culture: the technique of fishing (their principal occupation), hunting, trapping, gathering (Siberian cedar nuts) and fowling; also their weapons, traps, household utensils, dwellings, clothing and foods. Notes are given on their sacrificial practices (*kogo-kokh*). A camp of reindeer Tungus, about 40 versts northeast of Narym, was also visited. There a prominent Tungus shaman, Sholeul, made a performance for the author's ailing Tungus guide; he also gave information on customs at childbirth and burial, and related a legend on the creation of man. The Tungus' dwellings, clothing, food, and occupation are described; they keep reindeer, also do hunting but little fishing.

31918. SHATILOV, M. B. Vakhovskie ostiâki; étnograficheskie ocherki. Tomsk, 1931. iii, 175 p. tables, 9 plates. (Tomsk. Tomskil kraevoi muzei Trudy, t. 4) 88 refs. **Title tr.:** The Ostyaks of Vakh River; an ethnographic sketch.

Monograph on the Ostyaks living along the Vakh River from its confluence with the Ob' (61°03' N. 78°30' E.) upstream about 700 km. to that of another right tributary, the Korel'ki-égan. In separate

chapters, a detailed description is given of the natural conditions, the population (530 Ostyaks and 13 Russians), their dwellings, household implements and utensils, food, clothing, means of transportation, family and kin relations, administration (including justice and customary laws), general conception of the world, and beliefs. The most extensive is the chapter on their means of livelihood (trade) and economy (p. 131-64). The principal occupations are fishing and hunting, fowling and gathering of nuts; reindeer breeding is little developed. The material was collected in four months of 1926, and does not, therefore, reflect the great changes in economic and social life which occurred after that date, nor the present situation. The three-man economic-statistical expedition of 1926, headed by the author, was sponsored by Tomsk District Museum and the Chief Northern Committee. The party traveled by boat about 1,400 km. up and down the Vakh. Forty settlements containing 108 families (among them four Russians) were surveyed, and 162 museum objects secured. Not all the material obtained is dealt with in this monograph, e. g. sanitary conditions, folk medicine and folklore are excluded. Appended is a list of populated places on the Vakh River and its tributaries, a list of Ostyak words and phrases used in the text, a list of geographical names in the region, and a bibliography including 14 atlases and maps. Two chapters of this monograph were published previously, viz., "*Rodovye i semeinye otnosheniia, upravlenie . . .*" (Family and kinship relations, administration . . .), and "*Pishcha Vakhovskikh ostiâkov*" (Foods of the Vakh Ostyaks), which appeared in the same journal: Tomskil kraevoi muzei, Trudy, 1929, t. 2, p. 1-21, 41-50.

31919. SHCHADRONOV, B. Rechniki v vodakh Arktiki; iz bloknota uchastnika ékspeditsii. (Vokrug sveta, July 1950, no. 7, p. 39-42, illus.) **Title tr.:** River boat sailors in the arctic waters; from the note book of a member of the expedition.

In summer 1949, a number of river boats and other vessels built in various parts of the U.S.S.R., traveled via the White Sea-Baltic Canal and the White

Sea to Arkhangel'sk. Thence in August, all the vessels, under command of F. B. Naïanov and F. P. Demidov, made a passage along the Northern Sea Route to the Ob' and Yenisey Rivers, where they were to remain permanently for transportation service. Preparations, navigation conditions in the White, Barents and Kara Seas are described in general terms, without detail, though damages, or even losses, suffered by the fleet enroute, are suggested.

31920. SHCHEDRINA, Z. G. K izucheniū foraminifer glubokovodnykh donnykh otlozheniū Okhotskogo moriā. (Akademiā nauk SSSR. Doklady, 1953. nov. seriā, t. 90, no. 2, p. 287-89, table) **Title tr.:** A contribution to the knowledge of the deep-sea bottom Foraminifera of the Okhotsk Sea.

Contains a list of 57 foraminifers (tables 1-2) with their vertical distribution. The material was obtained in 1949 by the Expedition of the Institute of Oceanology of the Academy of Sciences U.S.S.R. in the southern part of the Okhotsk Sea from the bottom sediments at the depth of 3400 m. Analysis of the samples shows that the foram bottom fauna is almost identical with benthic fauna of corresponding regions of the Okhotsk Sea, and that the typical fossil forms are lacking.

31936. SHEPHERD, STANLEY J., Jr., and others. The effect of alloxan diabetes on the response of the adrenal gland to cold stress. (Endocrinology, Feb. 1952. v. 50, no. 2, p. 143-49, table) 33 refs. Other authors: M. J. Smith and B. B. Longwell.

Contains a study on the effects of cold (3° to 7° C.) and starvation on the adrenal gland of normal and diabetic rats. Cold exposure caused a decrease in adrenal ascorbic acid of both normal and diabetic animals; adrenal cholesterol decreased on cold exposure in diabetic rats, but in normal rats only when cold exposure was preceded by fasting. These findings suggest that the response of the adrenal gland to cold as measured by its cholesterol content, is related to curtailment of metabolically available carbohydrate.

Contains note of two flights, Mar. 13

and 15, 1951, made by four Lancaster aircraft each with crew of six. The route was from Keflavik, Iceland, to Jan Mayen, the northeast coast of Greenland at Kap Koefoed, and south along the East Greenland coast and over Denmark Strait to Keflavik. Weather conditions were noted and techniques of polar air navigation practised. **Copy seen:** DLC.

31938. SHEPPARD, J. V. Frostbite, facts and fictions. (Hygeia, Jan. 1947, v. 25, p. 38-39, 77)

Popular article dealing with the similarities between "trench foot," "immersion foot" and frostbite; damage to blood vessels due to cold injury, stasis, tissue anoxia; experiments with heparin and heparin therapy; cold allergy; prophylaxis. **Copy seen:** DLC.

31939. SHEREDEKA, I. A. Ispol'zovat' rezervy uvelicheniia ulovov v Severnom basseine (Rybnoe khoz'fstvo, July 1948, t. 24, no. 7, p. 3-5) **Title tr.:** To make use of reserves for increasing the Northern Basin catch.

Unusual storms in northern (Barents and White?) seas in Feb. and Mar. 1948 interrupted fishing, and damaged several Soviet trawlers; the catch dropped more than a thousand tons. To offset this loss, the author recommends shortening the time to repair vessels and organizing better both the pelagic and coastal fishing. The names or numbers of the damaged trawlers and the principal Soviet organizations directing the fishing industry are noted. **Copy seen:** DLC.

31940. SHEREDEKA, I. A. Osvoit' rybnye bogatstva Pechorskogo raiona. (Rybnoe khoz'fstvo, Dec. 1948, t. 24, no. 12, p. 15-16) **Title tr.:** The fish resources of the Pechora district must be utilized.

Contains notes on the abundance of valuable commercial fishes in Pechora district fisheries: navaga, white fish (*Coregonus autumnalis* and *Coregonus sardinella*), pike, and other species suitable for production of the best type of canned fish. The poor utilization of these resources is emphasized as due to defects in the fisheries organization. Measures for improvement are recommended, among them increase in the number of fishermen and some improvement in their living conditions. **Copy see:** DLC.

31945. SHETELIG, HAAKON, 1877-. Norges forhistorie; problemer og resultater i norsk arkeologi. Oslo, Aschehoug; Cambridge, Mass., Harvard Univ. Press, 1925. 277 p. illus. (Instituttet for sammenlignende kulturforskning. Ser. A.: Forelesninger, 5a) *Title tr.*: Prehistoric Norway; problems and results in Norwegian archeology.

Contains ten chapters of which the second (p. 25-46) is: Den arktiske kultur i Norges yngre stenaldre (The Arctic Culture in Norway's more recent stone age). This characterizes Norway's stone age, or (on the basis of a find of paleolithic implements at Nøstvet near Oslo) "Nøstvet culture," and notes finds of slate implements and weapons which established an Arctic group within the stone age—one having an independent culture representing northernmost Europe. It became apparent that this culture embraced a large territory, including the Scandinavian peninsula, Finland, and the Baltic region. Amber ornaments found along Norway's western coast have been traced to Russian (Baltic) origin. The Arctic stone age, then, does not refer to slate forms exclusively, it also includes special forms of bone and many other elements. Two "Arctic Culture" finds are described, one from Viste near Stavanger and the other from Ruskeneset. An important feature of the "arctic stone age" in northern Scandinavia is its naturalistic art. The drawings of this period are remarkably like those of the ice age in Western Europe and show little eastern influence. A close relation between the art of the ice age in Western Europe and

that of Norway in the stone age is apparent.

31946. SHETELIG, HAAKON, 1877-, and H. S. FALK. Scandinavian archeology. Translated by E. V. Gordon. Oxford, University Press, 1937. vii, 456 p. 33 text illus., 63 plates.

A comprehensive work on Scandinavian prehistory by two outstanding Norwegian scholars, an archeologist and a linguist. Deductions on material culture (dwellings, clothing, occupation, etc.) and religion are made from archeological and linguistic data. The prehistoric cultures in the Scandinavian Arctic are included; the Fosna "flint-places" and the paleolithic Komsa culture of Norway are briefly sketched (p. 18-21); the "arctic stone age" and its art, consisting of rock carvings, engravings and paintings, are extensively described (p. 73-121). The typical arctic culture (implements of reindeer horn, etc.) reached in the early post-glacial period farther south, in Jutland, the northern part of Holstein (near Hamburg), etc., and the art of the neolithic period, show closest connections with the Baltic and the east-European stone age culture.

Contains in v. 1, an introduction (exiv p.) giving terminology; doubtful genera, with descriptions of 14 new species; characteristics of Pantopoda; bibliography (317 items). Then follows (p. 1-224) a monographic treatment of eight families (Pycnogonidae-Phoxichilidiidae), with keys, Latin diagnoses, Russian descriptions, synonyms, critical notes, lists of specimens, and data on geographic distribution. In v. 2 (p. 225-554) the families Pallenidae and Nymphonidae are treated similarly; a supplementary bibliography compiled by D. Fedotov (84 items) and an index of Latin names are appended. Many species native to Russian arctic waters are included, also some from other northern seas because they are important for the study of Russian species.

31950. SHIMKIN, DEMITRI BORIS, 1916- Minerals, a key to Soviet power. Cambridge, Mass., Harvard

Univ. Press, 1953. viii, 452 p. 101 tables, maps, diagr. (Its: Russian Research Center studies [9]) 450 refs.

A systematic economic survey of the mineral resources of the U.S.S.R. is presented: their occurrence and reserves, and their production, consumption, and foreign trade; with a discussion of their trends. The salient geologic features of the main deposits are sketched, and the best deposits cited as a basis for more comprehensive study. The concluding chapter summarizes the past development of Russia's mineral industry and indicates the potentials of its mineral position. Each deposit is located by the official Economic Regions, and by coordinates in the index of place names.

The mineral resources of arctic Russia are widely scattered from the Baltic Shield in northwestern Russia to the Chukotsk Peninsula in northeastern Siberia, but are localized in certain geologic regions. In European Russia mineral deposits occur in the Precambrian Baltic Shield and in the folded Urals. In the former area occur deposits of copper and nickel at Pechenga or Petsamo (69°25' N. 30°15' E.) and Monchegorsk (67°55' N. 32°58' E.); and on Kola Peninsula deposits of andalusite, apatite, cerium and rare earths, ilmenite, nephelite, niobium, and tantalum. In the Northern Ural at Amderma (69°46' N. 61°38' E.) in Arkhangel'skaya Oblast' are fluorite deposits. In Asiatic U.S.S.R., mineral deposits are described in the Northern Ural, the Central Siberian Platform, and in the area of the Khatanga-Verkhoyansk system farther east. In the extremely inaccessible Northern Ural, a large deposit of piezo-electric quartz is found at Neroika (64°35' N. 59°45' E.) in Omskaya Oblast'. On the Central Siberian Platform graphite occurs at several localities east of Igarka (67°26' N. 86°36' E.) on the Yenisey River, and copper, nickel, cobalt, and platinum at Noril'sk (69°20' N. 88°08' E.). In the Khatanga-Verkhoyansk system in northeastern Siberia, various mineral deposits occur: arsenic (Chechimbai, 65°20' N. 129°30' E.), fluorspar (Zaliv Kresta, 65°50' N. 179°15' W.), gold (Kolyma 63° N. 148° E.), lead (Chechimbai, Manganzei, 65°20' N. 129°30' E.), tin (Kolyma, Pyrkakai, 69°18' N. 176°00' E.) and tungsten (Iul'tin 68°00' N. 177°45' W.). Extensive bibliography, place name and subject indexes are appended.

The large timber requirements of industry during 1951-55 involves extensive cutting in the northern European part of the U.S.S.R. Natural regeneration covers not more than 72 percent of area under felling and reproduces mostly deciduous forest. The recovery of the valuable coniferous forests necessitates planned reforestation. Among other methods, dispersal of seeds by aircraft is mentioned as a possibility.

Contains an account by the meteorologist, of the organization and construction of the first non-coastal hydrometeorological station on the plateau of Chukotskiy Poluostrov (on the left bank of the River Tadlean, a tributary of the Amguyma, approx. 66°50' N. 179°30' W.). The station's activities in 1936-38, and the initial hardships experienced by its four-man crew due to lack of, or defects in equipment are described. The importance of hydrometeorological stations on Chukotka for navigation on the Northern Sea Route is stressed. Fourteen stations in the northeastern area of the Route are briefly noted (p. 3-4), and indicated on map.

31956. SHIROKOGOROV, SERGEI MIKHAILOVICH. Ethnological and linguistical aspects of the Ural-Altaic hypothesis. Peiping, The Commercial Press Ltd., 1931. 198 p. 97 refs. Reprinted from *Tsing Hua Journal*, v. 6.

Contains a study on the relationship between language and ethnographic phenomena, the theory of evolution applied to languages in general and particularly in solving the problem of Tungus ethnic origins and their linguistic affiliations. The author is opposed to the Altaic hypothesis which assumes the former existence of an Altaic pre-language, and considers all attempts to find such an Altaic or Ural-Altaic pre-language a failure. He sharply rejects the theory of A. Sauvageot, and says that much more useful than production of theories which cannot be proved, would be to discover the Mongol and Turcic elements in Manchu and some Tungus dialects, to find Chinese elements in Manchu or to find out whether there are Tungus ele-

ments in Yakut, and to do similar work with the languages spoken in adjacent territories of the Palearctic.

31959. SHIROKOGOROV, SERGEĬ MIKHAILOVICH. Versuch einer Erforschung der Grundlagen des Schamanentums bei den Tungusen. (Baessler-Archiv, 1935. Bd. 18, Heft 2, p. 41-96, 11 illus., 2 music notes) **Title tr.:** An attempt at investigation of the principles of shamanism among the Tungus.

Contains a study of Tungusian shamanism based on author's observations in 1912-17 among the Tungus and Manchu in Transbaykalia, the Amur District, and northern Manchuria. He has selected from his extensive material chiefly those parts which deal with social relations between the shaman and his kinsmen. The most important spirits of the Tungus, the shamanistic paraphernalia and costume, the personality of shaman and

his relations with his own clan are thoroughly investigated. Shamanism among the Tungus, concludes the author, is of relatively recent origin (only about 200-300 years old); it is based on the animistic conception of the world; the shaman must be able to command the spirits, forcing them to take possession of his body as he deprives himself of consciousness, thus attaining a state of ecstasy. By getting power over the spirits, the shaman supposedly is able to protect his clan from the psychical disturbances caused by restless spirits. Thus shamanism is not a religion, it is rather a prophylactic measure to protect kinsmen from mental diseases which are common in those regions. The shaman possesses great influence over his people, although his office requires from him personally many sacrifices.

Translated by W. A. Unkrig from the Russian original *Opyt izsledovaniã osnov shamanstva u tungusov*, q. v. Shirokogorov supplied for the German translation drawings, music notes and some footnotes which were not included in the Russian original.

Contains a short report on two anthropological expeditions to the Samoyeds of the Bol'shezemel'skaya and Malozemel'skaya Tundras, the Yamal Peninsula and Taz region, organized by the Museum in 1938 and 1939, under leadership of N. N. Cheboksarov and with participation of the writer. In all, 847 persons of both sexes were investigated, with conclusion that the Samoyeds were a variation of the Mongoloid race. Summary of anthropometrical data on table 6. Blood group tests on 606 persons showed the following results: 23.1 percent were group O; 28.71 percent group A; 36.63 percent group B; and 11.55 percent group AB. 68.5 percent of the women and 56.3 percent of the men tested reacted to a phenil-tiocarbonid solution (1:8000), 4.74 percent had Daltonism. Fingerprints were also taken and their patterns evaluated in percent.

Seria doktorskikh dissertatsii, no. 8) 52 refs. *Title tr.:* Materials for the anthropology of Russian Lapps; attempt at an ethnographic and medical-anthropological investigation.

In the first part of this thesis for the M. D. degree, the geography and history of Kola Peninsula are sketched briefly, and a description given of Lapp daily life: the dwellings, clothing, food, economy, family and communal life, folk character, education, language. The health situation and most common diseases, and the medical aid rendered by the Russians are outlined. In pt. 2 (p. 28-64), the physical anthropology of Kola Lapps (1784 persons in 1907) is investigated. The author worked as a physician in his native town of Kola from 1894 to 1898, made anthropological observations and measurements of Lapps in 1898, 1902, and 1906. The principal measurements of some 65 Kola Lapps are given in a table. Weight, pigmentation of skin, hair and eyes, form of face, forehead, nose, lips, etc., trunk and extremities are described. In all, 37 points of the body were measured and evaluated. Comparison is made with Norwegian Lapps, and general characterization of the Lapp race given.

31976. SHMITS, PETERIS. The language of the Negidals. (Riga. Universitate. Raksti (Acta universitatis latvianensis), 1923. v. 5, p. 3-38)

Contains a Negidal-English vocabulary

with an introduction on this small Tungusian people (Negidals) of 400-500 persons, living in the valley of the Amgun River, a left tributary of the Amur. The material was noted down, at author's request by B. Barátosi-Balogh (a Hungarian), P. Krastin (a Latvian), and K. Loginovskij (a Russian). All the Goldi and Oleha words and many Orochi and Tungusian examples are taken from the author's manuscripts written in 1908 during his journey to the Amur. The Negidals and Orochi have the most shortened words of all Tungus-Manchu languages, showing that these peoples are strangers who have absorbed the Paleoasiatic aborigines.

31985. SHOSTAKOVICH, VLADIMIR BOLES LAVOVICH, 1870- . Die historisch-ethnographische Bedeutung der Benennungen sibirischer Flüsse. (Ungarische Jahrbücher, 1926. Bd. 6, Heft 1-2, p. 81-89, map) *Title tr.:* The historico-ethnographical significance of the names of Siberian rivers.

Contains discussion of Siberian toponymics with some ethnic conclusions. Place and river names survive longer than peoples who originate them. Names of rivers indicate the former dissemination of certain peoples, e. g. Tungusian river names are found over a vast area, and the Yukaghirs once inhabited a much larger territory than today. Rivers in the northern part of European Russia have Samoyedic names. The fact that many rivers bear the same name may indicate settlements and wanderings of a certain people. Recognition of the ethnic origin of a river name is often possible from an ending which literally means "water" or "river", as Tungusian *-kan* and *-ula*, Yukaghir *-don*, Yeniseian *-shet*, Zyryan *-wa* and Samoyedic *-ma*. The names of the largest Siberian rivers Ob', Yenisey, Lena and Angara cannot however be explained from any of the recent languages, they must have been named by peoples long extinct.

31987. SHOTRIDGE, LOUIS, 1883- . The emblems of the Tlingit culture. (Pennsylvania. University. University Museum. Museum journal, 1928. v. 19, no. 4, p. 350-77, 7 plates)

Contains description of ceremonial hats, helmets, crests and staffs, secured

by the author for the Museum, and exhibited in its Tlingit Hall. Besides ceremonial headdresses, the collection includes examples of fine carvings in wood, weaving in wool, porcupine-quill embroidery, feast dishes, war implements and trophies, shaman's paraphernalia, and masks. The colorful crests carved of wood represent emblems of different Tlingit clans. Author remarks on the place of these objects in his people's culture, and relates the legend on the origin of the Eagle hat.

Contains a sketch of Tlingit beliefs and shamanism. The shaman's headdress "Raven head-cover" is described and a legend recounted, of how a young *chet* (shaman) visited the land of yek (spirits of nature).

Copy seen: DLC.

31990. SHOTRIDGE, LOUIS, 1883- , and F. SHOTRIDGE, Indians of the Northwest. (Pennsylvania. University. University Museum. Museum journal, 1913. v. 4, no. 3, p. 71-100, 29 illus., incl. diagrs.)

Includes (p. 79-100) account of buildings, customs, social organization of Tlingits of Chilkat River, Southeast Alaska, the authors being members by birth of two chief families. Structure and use of the various types of permanent timber houses are described with plans and drawings: the dwelling house, smoke or food preparing house, and chieftain's "family house", a kind of "community hall" where feasts, councils, and gatherings were held. Division of tribe into

two exogamous moieties (Raven and Eagle) and several totemistic clans, the maternal and other classes, e. g., rich people, artisans, etc. are outlined. Special attention is given to the carved house posts and screens inside the house and their heraldry. The legend of the "grizzly bear" crest is related. Biographical notes on the authors are given, p. 79-80 and 114. *Copy seen:* DLC.

31991. SHOTRIDGE, LOUIS, 1883- . Keyt-gooshe "Killer whale's dorsal fin". (Pennsylvania. University. University Museum. Museum journal, 1919. v. 10, p. 213-16, col. plate)

Contains description of a painted baton used in conducting ceremonial dance songs among the Tlingit people of Sitka. The fringe on the baton represents the breath of the killer whale whose head only is shown. The idea of fashioning batons of this type came from the Tsimshians. Description of festival dances is included. *Copy seen:* DLC.

31992. SHOTRIDGE, LOUIS, 1883- . Land otter-man. (Pennsylvania. University. University Museum. Museum journal, 1922. v. 13, no. 1, p. 55-59, illus.)

Contains description of a wooden figurehead representing an otter-man, from a former war canoe, and the story of its origin after a long war between Chilkat and Sitka Tlingits. The figurehead was obtained for the Museum in 1918 at Sitka on Baranof Island.

Copy seen: DLC.

31993. SHOTRIDGE, LOUIS, 1883- . My northland revisited. (Pennsylvania. University. University Museum. Museum journal, 1917. v. 8, p. 105-115, 6 illus.)

Contains account of a trip to Southeast Alaska in 1915, sponsored by the University of Pennsylvania Museum, to study Tlingit customs and impress on the modern children the former life of their people. The author, a full blood Chilkat, visited his birthplace Klukwan (about 23 miles up the Chilkat River) and stayed there for two weeks collecting folk narratives. A description of the "call together" or "drum-bearing" ceremony formerly performed at funerals is given in detail. He traveled to Wrangell and Prince of Wales Island, made a brief study of Tlingit foodstuffs, then visited Indian communities at Ketchikan

and Juneau. Returning to his Chilkat tribe which was less affected than others by acculturation, the author joined in eulachon fishing season; he describes the primitive methods still in use, of catching fish and extracting oil.

Copy seen: DLC.

31994. SHOTRIDGE, LOUIS, 1883- . Tlingit woman's root basket. (Pennsylvania. University. University Museum. Museum journal, 1921. v. 12, no. 3, p. 162-78, 6 illus., col. plate)

Contains description of a collection of Tlingit baskets in the Museum. Diversity of forms, basket designs, coloring, makers and material, uses and names of baskets are discussed. Berry-picking, cooking and drinking baskets, also rain hats are described. Basketry has always been of economic importance and an art among the Tlingits. The geographic dissemination of this people is reviewed.

Copy seen: DLC.

31995. SHOTRIDGE, LOUIS, 1883- . A visit to the Tsimshian Indians. (Pennsylvania. University. University Museum. Museum journal, 1919. v. 10, p. 49-67, 117-48, 17 illus.)

Contains an account of the author's trip to the Tsimshians of the Nass and Skeena Rivers, northern British Columbia, in Aug.-Oct. 1918, for the University of Pennsylvania Museum. Legends were noted down, photographs made and some objects acquired. The people on the coast were found to be modernized and, chiefly from the influence of early missionaries, ashamed of their Indian origin and culture, and eager to adopt the White civilization. Only among the inland tribes (e. g. at Aiyansh on the upper Nass) was it possible to obtain information on secret society dances, to get a ceremonial dance outfit, etc. According to the popular traditions, many Tsimshians migrated to Alaska and became Tlingits. A visit to the Indians on the Gitsumkelun River (about 90 miles east from Prince Rupert) is described: they are called Git-kshen and say that their grandfathers came there from Alaska. Narratives on former migration, fight of the Tlingit clans, etc. were recorded, and modern Tsimshian villages described. Other places visited were: Git-wentl-qool, a well-preserved native town, Git-wen-geh (here a brief study on religion, ceremonials and mythology of the people was made), and Hazelton. *Copy seen:* DLC.

31996. SHOTRIDGE, LOUIS, 1883- . War helmets and elan hats of the Tlingit Indians. (Pennsylvania. University. University Museum. Museum journal, 1919. v. 10, p. 43-48, 6 col. plates)

Contains description and illus. of a collection of decorative headgear, acquired for the Museum by the author, a native Tlingit, on his trip to Southeast Alaska in 1915. Land and sea animals and birds are used as individual house-group emblems or crests; these are represented in carvings and paintings on house pillars, batons, helmets and ceremonial hats, which were used at special performances during important conventions or potlaches, peace dances, in wars and on all formal ceremonies. The odd-shaped style of women's headdresses was borrowed from the Kwakiutl Indians. The objects were considered as communal property and were obtained from chiefs of different elan divisions and house groups. **Copy seen:** DLC.

Contains abstract of a paper presented at the Congress, which summarizes investigations undertaken during the past 25 years in Canada. The position of the Magnetic North Pole on Prince of Wales Island, and the fact that much of the auroral zone of maximum brightness and frequency crosses Canada are mentioned as factors in Canadian interest in such work. Need for information on the upper atmosphere and its relation to development of high altitude jet aircraft is noted. **Copy seen:** DGS.

Title tr.: Dipterous insects, fam. Culicidae. Blood-sucking mosquitoes, subfam. Culicinae.

Contains in the introduction (p. 1-27), a morphological sketch (imago and larva), data on geographic distribution and on importance of mosquitoes (Culicidae) as transmitters of malaria, yellow fever, dengue, and as hosts of some parasitic worms (Nematoda) pathogenic to man; brief notes on gathering, mounting and preservation of mosquito specimens. In the special part (p. 29-248) are tables for the determination of genera and species; descriptions of 121 species and six subspecies and varieties, with literature references, critical notes and data on distribution and ecology. A few species (*Anopheles maculipennis*, *Theobaldia alaskaensis*, *T. borealis* and some *Aedes* species) native to Kola Peninsula, Arkhangel'sk province and Siberia (Yakutia) are included. Summary in English, p. 249-53.

Contains a general study of the origin and descent of the birds in the taiga zone of the palaearctic region of Europe and Asia, with data on the limits, characteristics and geological history of the region, and on the development of its flora and fauna. Twenty-six birds endemic to this zone are listed with data on their distribution within it. Another list is offered of 28 birds inhabiting the zone but spreading also into adjoining regions, with notes on their distribution. The geographic dissemination of certain groups and species in the zone is then dealt with; the elements of this fauna are presented and its connection with avifauna of other regions (North America) discussed.

Contains a grammar (phonetics, morphology, syntax and lexical notes) of the Ostyak literature language, based on the dialect of Kazym. The characteristics of language and its three groups of

dialects are given. The introduction explains the names of the people ("khanti", "ostfiak"), gives their number (22,600 in 1926) and territory (from the mouth of the Ob' River to its tributary, the Irtysh, also on the rivers Kazym, Konda, Vasyugan, Malaya Sos'va, and others). The influence of neighbors is noted. History of the investigation of Ostyak language and culture is outlined and bibliography included (p. 197-98). Notes on Ostyak pictographs are given. The literature is stated to be two editions of Matthew's Gospel (1868 and 1880) and two ABC books published by the Russian missionaries, apparently without influence, as the Ostyaks remained illiterate. Six elementary text books and three books of tales were published in 1931-36 in a new Latinized alphabet; the orthography however, was reformed again in 1936.

32015. SHTERNBERG, LEV ĪAKOV-LEVICH, 1861-1927. Materialy po izucheniiu giliāškago āzyka i fol'klora. Sobranye i obrabotannye . . . Tom' 1, Obrazsny narodnoi slovesnosti. Chast' I-aia, Ėpos (poēmy i skazaniā, pervaiā polovina), teksty s perevodom i primēchaniāmi. S.-Peterburg, Akademiā nauk, 1908. xxii, 232 p. **Title tr.:** Materials for the study of the Gilyak language and folklore. Collected and edited by . . . Vol. 1, Sketches of folk literature. Part 1, Epos (poems and narratives, first half), texts with translation and annotations.

Contains texts of 42 historical and mythological poems in prose with Russian translation, numerous explanatory notes and references. The material was collected between 1891 and 1897 among the Gilyaks (about 6000 persons) living in northern Sakhalin and on the lower Amur, Maritime Province. The Gilyak language, the author states, has nothing in common with Tungus, Ainu or any other Asiatic language; it shows, however, some affinities with American Indian languages (p. vi). A characterization of Gilyak narrators, their poetry, types of narratives and songs (twelve mentioned) is given in the introduction. The cycle *tylgund*, or myths of origin, contain motives close to those of North American Indians (p. xx).

32016. SHTERNBERG, LEV ĪAKOV-LEVICH, 1861-1927. Die Religion der

Gilyaken. (Archiv für Religionswissenschaft, 1905. Bd. 8, p. 244-74, 456-73)

Title tr.: The religion of the Gilyaks.

Contains a study on the Gilyak religion, characterized as a form of anthropomorphism. Deals with personification of the earth, mountains, the sea, animals (bear, swordfish, etc.); the gods of heaven; mortals elevated to gods; sacrifices and festivals (bear ceremonies, etc.); spirits and demons; magic healing and shamanism; and the funeral rites.

Copy seen: DLC.

32017. SHTERNBERG, LEV ĪAKOV-LEVICH, 1861-1927. Sem'ia i rod u narodov severo-vostochnoi Azii. Leningrad, 1933. xix, 188 p. tables, port. (Leningrad. Institut narodov Severa. Nauchno-issledovatel'skaia assotsiatsiia. Materialy po ētnografii, t. 3) **Title tr.:** Family and clan among the peoples of northeastern Asia.

Contains a selection of papers (several previously published) on family life and social organization of the Gilyaks on Sakhalin Island, and the Orochis of Tatarskiy Proliv on the mainland. They are based on the observations and inquiries of the author who was influenced by the Morgan's theory on the evolution of the human family, and who attempts to interpret the ethnological materials from the Morgan-Engels point of view. He deals with terms and classes of relationship among the Gilyaks, their social organization, relations between clans; Gilyak phratries and their origin; juridical norms (conceptions of property, native courts); juridical, moral and psychological norms and attitudes in relations between the sexes, love and jealousy; courtship, bride price, cousin marriage; genesis of Gilyak norms of matrimony, and terminology of relationship, etc.

Appended are several articles on general ethnology written by Shternberg for *Ėnsiklopedicheskiĭ slovar'* (Brokgauz i Efron, 1890-1904), on theory of tribal life, abduction, adoption, killing of children and the aged among the primitives, endogamy and exogamy, and evolution of the family. F. Engels' "A newly discovered case of group-marriage" is also given. Shternberg's life and works are described in introduction by Ā. P. Al'kor (Koshkin), with special attention to their importance for social studies of the primitive family and society. Shternberg was a political deportee to Sakhalin for ten years (from 1889) and began his

ethnographical researches on the Gilyaks in 1891.

32019. SHUBIN, G. G. Los' v uprzhzhke. (Nauka i zhizn', Apr. 1951. t. 18, no. 4, p. 13-14, illus.) **Title tr.:** Elk in harness.

Advantageous features of the elk are noted, particularly its broad hoofs which enable it to traverse soft snow and marshes impassable for other large animals. An experimental farm for its domestication was organized in the Pechora-Ylych reserve in 1946 under direction of Stalin prize-winner Prof. P. A. Mantefel'. The elk proved easy to domesticate, attaching itself to man like a dog. In 1949 and 1950, the domesticated elks of the farm maintained communication and transportation throughout the reserve when all other means failed.

"The theory of wind-driven ice drifts [based on V. W. Ekman (*Arctic Bibliography*, No. 4467A, 4468A)] is verified by data indicating relationships in velocities and direction between wind and ice drifts. The nature of the opposing current under ice is explained and the period during which ice velocity becomes stabilized through wind action was approximated mathematically." Data from the Russian Ice-floe Drifting Expedition North Pole, 1937-38, are considered to confirm H. Sverdrup's theory from results of the Maud Expedition (*Arctic Bibliography*, No. 17316). These data are said to indicate wind action as the origin of currents off the East Greenland coast. Summary in English.

32022A. SHULEIKIN, VASILII VLADIMIROVICH, 1895- Fizika morni: izdanie tret'e pererabotannoe i dopolnennoe. Moskva, Izd-vo Akademii nauk SSSR, 1953. 991 p. 615 illus., diagrs., maps (some in color incl. 2 fold.) several hundred refs. in footnotes. **Title tr.:** Physics of the sea; third revised and enlarged edition.

Basic study in marine physics, encyclopedic in scope and character. In ten parts: 1. The dynamics of sea currents (p. 7-140) deals with the causes and mo-

tive forces of water movements; circulations and their theories; drifts, including those of ice fields; theory of invading currents as applied to the Gulf Stream and the North Atlantic Current, etc. 2. Dynamics of tidal waves (p. 141-212), their genesis, size, movements; theories; seiches and their origin, etc. 3. Dynamics of surface and internal waves (p. 213-92), their origin, nature and development; theoretical aspects; wave action on shores, etc. 4. Thermics of the sea (p. 293-395), heat gains, losses, balance; temperature, temperature zones and waves; thermic conditions of ice cover, etc. 5. Physical basis of climate and weather (p. 396-555) thermic and pressure relations between sea and land; air movement over sea and land; etc. 6. Optics of the sea (p. 556-638), illumination and color; light dispersion in the water; etc. 7. Marine acoustics (p. 639-726), propagation, speed, dispersion, etc. of sound in the sea; echoes and echo-sounding; sounds of marine animals, etc. 8. Molecular physics of the sea (p. 727-819) including: stereometry of water and ice; evaporation, conductivity of water and ice; freezing of sea water; surface films, and their use, etc. 9. Biological marine physics (p. 820-902) deals with the form, movements of fishes, dolphins and their shoals; adaptations to aquatic life, etc. 10. Technical physics of the sea (p. 903-976), problems of utilization of tides, waves and marine thermal energy; shipbuilding and physical factors of the sea, etc. Personal name and subject indexes are appended. This work was originally published in two volumes (1932, 1937), with a second edition (833 p.) in 1941. In the third edition it is brought up to date and enlarged, particularly in the section on thermal aspects of the sea and that on the physical bases of climate and weather. **Copy seen:** DLC (1941 and 1953 ed.).

32023. SHULEIKIN, VASILII VLADIMIROVICH, 1895-, Teoriia drevlia lediannykh polei v ee sovremennom sostoianii. (In: Akademiia nauk SSSR, and Vsesoiuznoe geograficheskoe obshchestvo, Pamiati Iu. M. Shokalskogo, chast' 2, 1950. p. 63-82, diagr.) **Title tr.:** The theory of the drift of ice fields and its present status.

Contains a criticism of the theory of ice drift and data on some changes of this concept in the light of recent investigations, with diagrams, formulas

and a study of the drift along the eastern coast of Greenland.

Copy seen: DLC; MH-Z.

32026. SHUL'MAN, A. R. K raschetu gruzopod'emnosti lediannykh pereprav po teorii tsentral'nogo izgiba upravgol plo na upravnom osnovanii. (U.S.S.R. Glavnoe upravlenie gidrometeorologicheskoi

sluzhby. Trudy nauchno-issledovatel'skikh uchrezhdeniĭ, Seriya V, 1946. vyp. 20, p. 30-38, 6 diagr.) 6 refs. **Title tr.:** On the calculation of the load-carrying capacity of ice crossings based on the theory of central bending of an elastic plate on an elastic foundation.

"Simplified formulas were developed for calculating the load-carrying capacity of natural ice. Relatively good agreement was found in comparing values using the simplified formulas, the Hertz-Bernshtein formula, and observed values. The simplified formulas may be applied to all practical calculations of the load-carrying capacity of an ice cover whenever the theory of central bending of an elastic plate on an elastic base is applicable."—SIPRE. **Copy seen:** DLC.

32027. SHUL'MAN, A. R. K voprosu o raschete gruzopod"emnosti lediānogo pokrova. (U.S.S.R. Glavnoe upravlenie gidrometeorologicheskoi sluzhby. Trudy nauchno-issledovatel'skikh uchrezhdeniĭ, Seriya V, 1946. vyp. 20, p. 9-15, 4 diagr.) 9 refs. **Title tr.:** On the problem of calculating the load-carrying capacity of the ice cover.

"The deformation of ice cover is discussed for static loads, loads moving slowly over the ice, rapidly moving loads, and the impact of loads on the ice. An application of a static load to ice showed that elastic deformation took place at the moment of application, which developed into plastic deformation later, and depended on the temperature and mechanical properties of the ice. Loads moving slowly or rapidly over the ice cover produced vibration which depended on the load speed and the interval between individual loadings. A review of available data suggested that the load-carrying capacity for slowly moving loads, be computed according to the theory of an elastic plate on an elastic foundation, and empirical changes be made for other conditions."—SIPRE. The paper is based on war experience and theoretical investigations. **Copy seen:** DLC.

Trudy nauchno-issledovatel'skikh uchrezhdeniĭ, Seriya V, 1946. vyp. 20, p. 58-87, 9 diagr., 5 tables, 1 fold. table) 15 refs. **Title tr.:** Theoretical

and experimental basis for the tables of load-carrying capacity of the ice cover.

The tables were based on experience on the Gulf of Finland and Ladozhskoye Ozero in wartime and were compiled for use of the Soviet Baltic Fleet.

"The load-carrying capacity of an ice cover is expressed as a function of the allowable stress, the modulus of ice elasticity, the thickness of the ice, and the radius of load distribution. The effects of air temperatures, salinity of the water, and cracks in the ice are considered in setting up the tables. The coefficient of the safety factor for limited or maximum safety is calculated. Rules for calculating the load-carrying capacity of ice crossings are outlined."—SIPRE. **Copy seen:** DLC.

SHUL'MAN, A. R., see also Lagutin, B. L., and A. R. Shul'man. O metodakh rascheta lediānykh pereprav. 1946. No. 30300.

32029. SHUL'MAN, S. S. Novye i maloizuchennyye slizistyye sporoviki Belogo moriā. (Zoologicheskii zhurnal, 1953. v. 32, vyp. 3, p. 384-93, illus.) **Title tr.:** New or little known species of Myxosporidia of the White Sea.

Contains descriptions of two new sporozoan families, Myxobylatidae and Parvicapsulidae, a new genus, *Parvicapsula*, and seven species, including four new to science, found parasitic in various fishes of the White Sea (Kandalaksha and Onega Bays), some spreading to the Barents Sea. **Copy seen:** MH-Z.

32030. SHUL'MAN, S. S., and R. E. SHUL'MAN-AL'BOVA. Parazitry ryb Belogo moriā. Moskva-Leningrad, Izd. Akademii nauk SSSR, 1953. 199 p. illus. tables, about 150 refs. **Title tr.:** The parasites of White Sea fishes.

Contains a study of the parasites (except blood parasites) of over thirty species of fish, collected during three years (1947, 1950, 1951) in various areas of the White Sea. The material (some 116 forms) is presented according to the taxonomic order of the parasites: Flagellata, Sporozoa, Infusoria, Monogenoidea, Digenoidea, Cestoidea, Nematodes, Acanthocephala, Hirudinea and Crustacea (p. 11-95); as well as that of the hosts (p. 96-159). Ecological and zoogeographic characteristics of the parasites are considered in relation to the Sea generally and to its sections (p. 160-75). Dependence of the fish parasites on the

hosts' life and food (p. 176-81) is discussed, and (p. 181-91) their economic significance. **Copy seen:** DLC.

SHUL'MAN-AL'BOVA, R. E., see Shul'man, S. S., and R. E. Shul'man-Al'bova. *Parazity ryb Belogo moria*. 1953. No. 32030.

32031. SHUL'TS, G. E. O srokakh listopada na severe i fuge SSSR. (Vse-sofuznoe geograficheskoe obshchestvo. Izvestiia, Sept.-Oct. 1947. t. 79, no. 5, p. 557-64, diagrs., table) 9 refs. **Title tr.:** Periods of leaf shedding in the U.S.S.R. North and South.

Includes remarks on methods of the investigation and of the graphical presentation, and results of observing leaves of various plants turn yellow and fall on the northern limit of forest near Kirovsk in the Kola Peninsula in 1936-38. Dates of the beginning and end of each phenomenon are given. The relation of these data to the period of photosynthesis and to temperature is discussed, and they are compared with the results of observation in other regions of the U.S.S.R. It is concluded that the maturation period of leaves in the North is shorter than that in the more southerly areas. **Copy seen:** DLC.

32032. SHUL'TS, L. R. Salymskie ostiaki; iz materialov k etnografii iuzhnykh ostiakov. (Tiumenskoe obshchestvo nauchnogo izucheniiia mestnogo kraia. Zapiski, 1924. vyp. 1, p. 166-200) 15 refs. **Title tr.:** The Ostyaks of Salym; from materials for the ethnography of southern Ostyaks.

Contains material collected on the author's trip in the winter of 1909 to the Demyanka River, and that sponsored by Tobol'sk Museum, in the summer of 1911, when he followed the entire course of the Salym River (approx. 58°-61° N. and 70°-74° E.). The landscape and rivers, wildlife, prehistoric settlements, Ostyak narratives on the first inhabitants of the region, the population (270 Ostyaks in 1910), their anthropological appearance (dark people, but not Mongoloid) and health conditions are described. Occupation and material culture is treated in equipment and utensils, food and stimulants (tea, tobacco, also poisonous mushrooms), sheep husbandry, clothing and embroideries (designs named), boats, sledges (man- or dog-drawn), skis, weapons (knives, bows and

arrows, guns, traps and nets), measuring units, etc. As representative of the spiritual culture of these people, their musical instruments (three), pantomimic play and dances, children's games and toys, wedding and burial rites are described. Finally the old religious beliefs are discussed: the god Torm, myths of the stars, ancestor worship, the family idols or *tonkhs*, and sacrifices to them, the role of figurines on bronze plaques, bear ceremonies (the bear is considered a son of Torm), possible relics of totemism, household spirits and spirits of nature, beliefs on the mammoth. Notes on heroic songs and shamanism are included. **Copy seen:** DLC.

32033. SHUMACKER, HARRIS B., Jr., 1908- . Injuries due to cold, with particular reference to frostbite and trench foot. (Wisconsin medical journal, Mar. 1947. v. 46, p. 317-24, port.) 39 refs.

Contains a review covering pathogenesis and pathology due to various degrees of cold; frostbite, its prevention, clinical course, pathology and treatment, late symptoms; trench foot, its etiology, prevention, pathology and similarities with frostbite, treatment, sequels; immersion foot and immersion hand, their similarities to trench foot, their pathology and therapy. **Copy seen:** DSG.

32034. SHUMACKER, HARRIS B., Jr., 1908- . The present status of the treatment of frostbite. (Angiology, Dec. 1951. v. 2, no. 6, p. 476-84) 20 refs.

Contains a review and discussion of immediate and early therapy in man and experimental animals. The main consideration is given to the problem of slow versus rapid thawing; plaster casts, anticoagulants and antihistaminic substances, sympathetic intervention, rutin, ACTH, etc., are included, as well as the subject of gangrene and sequels. **Copy seen:** DSG.

32035. SHUMACKER, HARRIS B., Jr., 1908- , and others. Studies in experimental frostbite; 6, effect of rutin and benadryl with some notes on plaster casts and the role of edema. (Angiology, Apr. 1951. v. 2, no. 2, p. 100-107) Other authors: L. R. Radigan, H. H. Ziperman, and R. R. Hughes.

Contains an account on experiments with mice, rats and rabbits. Rutin and benadryl had some beneficial effect in reducing incidence and degree of gangrene

after experimental frostbite but were not as dramatically and consistently effective as rapid thawing. Plaster casts applied after thawing, and before swelling set in, were of no therapeutic value.

Copy seen: DSG.

32036. SHUMACKER, HARRIS B., Jr., 1908-, and **R. E. LEMPKE.** Studies in experimental frostbite; 7, an inquiry into the mode of action of rapid thawing in immediate treatment. (Angiology, Aug. 1951. v. 2, no. 4, p. 270-82, 11 tables) 21 refs.

Contains an account on experimental frostbite in mice, rats and rabbits, treated by cooling or rewarming. The extent and incidence of gangrene in these animals was directly related to the duration of freezing, the extent of the frozen area, and also to the degree and duration of vasoconstriction and capillary stasis. The efficacy of rapid thawing was again proven and a possible explanation for it is given.

Copy seen: DSG.

32037. SHUMACKER, HARRIS B., Jr., 1908-, and **A. W. KUNKLER.** Studies in experimental frostbite, 9; rapid thawing and prolonged local cooling in the treatment of frostbite resulting from exposure to low ambient temperature. (Surgery, gynecology and obstetrics, Apr. 1952. v. 94, p. 475-80, 2 tables) 6 refs.

Contains a report on experimental frostbite in mice. The frozen parts (tails) responded favorably to rapid thawing in 42° C. water for two minutes. Prolonged cooling was without benefit and possibly harmful.

Copy seen: DLC.

32038. SHUMACKER, HARRIS B., Jr., 1908-. The surgical treatment of gangrene in trench foot. (Surgery, gynecology and obstetrics, Oct. 1946. v. 83, p. 513-20, 8 figs.) 2 refs.

Contains a discussion of the problem of trench foot gangrene and its difference from gangrene in obliterative diseases; of infection and vasoconstriction; followed by presentation of amputation methods applied by the author. The use and advantages of skin grafts is stressed.

Copy seen: DLC

32039. SHUMACKER, HARRIS B., Jr., 1908-. Sympathectomy in the treatment of frostbite. (Surgery, gynecology

and obstetrics, Dec. 1951. v. 93, no. 6, p. 727-34, 2 fig., 3 tables) 21 refs.

Contains an account of 33 sympathectomies performed on 20 patients. The observations suggest that sympathectomy has "a definite place" in the intermediate and late treatment of frostbite; it also may be useful in early treatment of certain cases, and tends to bring about disappearance of pain, sensitivity and edema, quicker demarcation of gangrenous areas and quicker healing of residual ulcers.

Copy seen: DLC.

32040. SHUMACKER, HARRIS B., Jr., 1908-. Sympathectomy in the treatment of peripheral vascular disease. (Surgery, 1943. v. 13, p. 1-26, 5 figs., 4 tables) 16 refs.

Contains a description of an operative technique of dorsal and lumbar sympathectomy. The results of sympathetic denervation of 83 extremities, some with post-frostbite sequelae, are presented. The value of the method in frostbite therapy in cases when procaine blockade fails, or in those with obliterative arterial diseases, are also discussed.

Copy seen: DLC.

32041. SHUMACKER, HARRIS B., Jr., 1908-, and **D. L. ABRAMSON.** Sympathectomy in trench foot. (Annals of surgery, 1947. v. 125, p. 203-215, 4 figs., 4 tables)

Contains an account on the effects of lumbar sympathectomy in the treatment of trench foot sequelae, with 66 extremities studied. The authors feel that the procedure accelerates the rate of healing of gangrenous lesions, vascerations, secondary infections, etc., and that it has "a definite but limited use" in certain selected cases of trench foot.

32044. SHVEDE, E. E. K 150-letiiu pervoi russkoi krugosvetnoi ekspeditsii Kruzenshterna i Lisianskogo. (Akademiia nauk SSSR. Izvestiia. Serii geograficheskaiia, Nov.-Dec. 1953. no. 6, p. 57-66, fold. map) 8 refs. **Title tr.:** 150th anniversary of the first Russian round-the-world expedition by Kruzenshtern and Lisianskii.

Summary of accounts of the voyages of the *Nadezhda* and *Neva* in 1803-1806 under I. F. Kruzenshtern and I. F. Lisianskii, which included visits to Kamchatka and Alaska (see *Arctic Bibliography*, No. 9377-9381 and 10207-10209). The scientific work of the expedition is stressed, and some details are given (in introd.) on its objectives and preparation. **Map** shows ships' routes.

32045. SHVETSOV, PETR FILIMONOVICH. K opredeleniiu nekotorykh poniatiu v merzlotovedenii. (Akademiia nauk SSSR. Izvestiia. Serii geograficheskaiia, 1951. v. 1, no. 5, p. 83-87) **Title tr.:** Definitions of some terms in permafrost.

"Cryosphere is defined as the region of subfreezing temperatures on the earth's crust, including glaciers, ice, snow cover and the upper layer of the atmosphere. Soils are rated as constituents of the cryosphere even if only a part of the water is present in the solid state. Definitions of freezing, and of frozen and unfrozen ground by Soviet permafrostologists are discussed. Frozen ground is classified according to its time of existence, as eternal or permafrost (three to many thousand years duration), one-two year duration, seasonal, and short duration. Other terms for permafrost, frost zone of the lithosphere and continuous frost are discussed. Permafrostology is viewed as a science of heat flow during cooling and freezing, heating and thawing of the upper layer of the lithosphere, together with accompanying mechanical actions of agents inside and on the surface of the earth's crust."—SIPRE.

Tsentrsovnafsmena Narkomprosa RSFSR, 1928. 191 p. about 50 refs. *Title tr.:* Witchcraft, magic healing and the casting of spells among the Komi people; materials to the psychology of magic.

Monograph on witchcraft and folk medicine of the Zyryans, based on literature, the author's own observations over some ten years, also on accounts of Zyryan students at various schools in Ust'-Sysol'sk. The magicians and their activities are described, and characteristics of some famous sorcerers given. The types of magic are discussed: the partial and sympathetic magic, possession by a spirit, influence of hypnosis, etc. Details are given on the inventor of, and materials used for charms: certain implements and weapons, metals, salt and bread, flesh and glands of the ermine, also parts of a human corpse, onions and radishes, etc. The bewitching of men, animals and inanimate objects, and subsequent healing of the sick are described. In the last chapter, an attempt is made to explain the origin of magic conceptions and their evolution; the means to overcome witchcraft are also suggested. Summary and contents in German on p. 184-85, 191.

32057. SIGURÐSSON, SIGURÐUR, 1872- . Tuberculosis in Iceland; epidemiological studies. Washington, Public Health Service, 1950. ix, 86 p. maps, diags. (U. S. Public Health Service publication no. 21. Public Health technical monograph no. 2)

Contains an introductory note on the country, the people and the history of medical services, followed by sections on: (1) tuberculosis up to 1911; (2) the disease since 1911 (reporting, mortality, tuberculin surveys, post-mortem examinations); (3) tuberculosis in domestic animals; (4) tuberculosis control (first anti-tuberculosis provisions, systematic control work, Association of Tuberculosis Patients); (5) case-finding surveys; (6) mass surveys; (7) general discussion on spread of the disease, outlook and plans for the future. Some of the conclusions reached suggest a lower infection rate, but considerably higher mortality in women; lower incidence in rural districts; effectiveness of X-ray surveys in checking the disease since 1935. **Copy seen:** DLC.

32058. SIGURJONSSON, JULIUS, and others. Feeding and nutrition in Iceland. (Medical officer, London, Apr. 7, 1945. v. 73, no. 14, p. 109-112, 8 tables) 27 refs. Other authors: P. A. Gardiner, and S. Yudkin.

Contains a study made on representative families from various parts of the country, in 1939-40 and in 1942. Caloric value and composition of diet, mineral and vitamin content, and principal individual foodstuffs are analyzed and evaluated. Caloric intake (including that from fat and protein) was found sufficient and so was the mineral intake. Shortage of fresh fruit and vegetables resulted in

vitamin A, C, and D insufficiency. Mild rickets was very common, but scurvy very rare. **Copy seen:** DSG.

32061. SILVERMAN, JACOB J. An inquiry into the incidence of hyperhidrosis in convalescent trench foot. (*Annals of internal medicine*, Oct. 1946. v. 25, p. 702-710, 2 fig., 2 charts) 19 refs.

Contains a study of the problem of excessive sweating, claimed to be common in the late stages of trench foot. Two hundred convalescent trench foot patients were studied and compared with 100 general medical patients. The degree of trench foot seemed to have no bearing on the incidence of hyperhidrosis, and this condition, as seen in trench foot, is part of generalized process similar to that in anxiety states. Hyperhidrosis is not considered to be a diagnostic feature of convalescent trench foot.

annual meeting, Oct. 24-25, 1947. p.
30-31) Other authors: M. Brown, L. B.

Cronk, and G. C. Clark. "This study
was one aspect of a more general study
of Eskimo health and metabolism con-
ducted on Southampton Island by the
Queen's University Arctic Expedition
Summer 1947."

Contains a summary of observations
made on an Eskimo family of four fed
for six days on exclusive diet of pemmican.
All showed slight or moderate ketonuria
on one or more days, but tolerated the
diet well except the father (aged 67)
who had suffered from his stomach for
some years. Fasting (four days) pro-
duced ketonuria which became very
pronounced by the fourth day.

reached that the soil of burned-over areas
offers the best conditions for regeneration
of the pine forest. **Copy seen:** DLC.

SINTSOV, I., *see* Efimenko, A. Īuridi-
cheskie obychai. 1878. No. 28868.

32070. SIRELIUS, UUNO TAAVI, 1872-1929. The genealogy of the Finns; the Finno-Ugrian peoples. Helsinki, Government Print. Off. 1925. 77 p., 72 illus., map.

Contains a popular account of the entire Finno-Ugric family of peoples, based on recent scientific work. Linguistic and physical affinities of these peoples, their present level of culture, original home and later distribution, history, means of livelihood, dwellings, dress and ornaments, popular poetry, customs, and old religious beliefs are summarized. Many photographs of ethnological value illustrate the text. Some of the principal questions are also summarized: No scientific proof has been found for the conjecture made by Castrén and others, that the Finno-Ugric languages might be related to the Mongolic and Turco-Tartaric. More adherents have been gained for the view which supposes a relationship between the Finno-Ugric and Indo-Germanic groups. Neither is there any conclusive proof of the assertion that the Finno-Ugrians are physically related to the Mongolians. The original Finno-Ugric people is supposed to have been still in existence 2500 B. C., and the original home to have been in the regions between the headwaters of the Dnieper and the western Dvina and Urals. This was a hunting and fishing people, who had domesticated the dog and sheep, and apparently had learned to use the reindeer. This epoch belongs wholly to the stone age. The Finno-Ugrians seem to have learned the first rudiments of agriculture from the Indo-Europeans (about 2000 B. C.). About that epoch (transition from stone to bronze age) there occurred a dispersion of the original stock which led to the birth of many new peoples and at the same time to a migration from the original home. All these conclusions are based chiefly on linguistic investigations. The present localities of the Finno-Ugric peoples, their number and political situation are outlined.

32074. SIRELIUS, UUNO TAAVI, 1872-1929. Über die Sperrfischerei bei den finnisch-ugrischen Völkern; eine vergleichende ethnographische Untersuchung. Helsingfors, Société finno-ougrienne, 1906. 6 p. l., 486 p., 607 illus. (Suomalais-ugrilainen seura. Kansatieteellisiä julkaisuja, v. 3) about 130 refs. *Title tr.:* On trap fishing among the Finno-Ugric peoples; a comparative ethnographical investigation.

Contains a monograph based on literature, studies in the principal museums of Russia, Scandinavia and Berlin, and on personal investigations among the Ostyaks, Voguls and Tatars in Siberia, where the author spent 14 months in 1898-1900; the traditional fishing technique of Finns he studied at home in 1900-1901. Trap fishing is described

among the Ostyaks and Voguls (p. 3-111), Zyryans (p. 123-35), Lapps (p. 138-51), and Finns (p. 152-32). Comparative investigation is made (p. 351-462) of each fishing implement separately and parallels given from different peoples. Conclusion is drawn that many fishing implements and techniques were known to the Finno-Ugric peoples in olden times when all lived together in eastern Russia, probably in the Kama region. Other fishing devices were invented in the Finnish-Permian period. Some West European implements came through the Baltic Finns, especially Karelians, to the Zyryans, Votyaks, and Cheremis. The Ostyaks and Voguls, two typical fisher peoples, have preserved many old means of fishing; some implements, however, came from the Russians, and the Lapps have borrowed several from the Scandinavians.

Contains description of two sledges recently found in the morasses of Lapland (one at Alasenjärvi near Laukaa and another in Enontekiö) which probably were drawn by reindeer. On the basis of these and previously investigated finds, the author reconstructs three

types of prehistoric sledges, of which one may be the prototype of the Lappish reindeer sledge of today, and another is also too large to be a dog sledge. Prehistoric sledges are known from finds in northern Finland, the northern part of European Russia and western Siberia, and all of them show striking affinities. The find from Finland is compared with sledges of present-day Chukchis.

32079. SJÖSTRÖM, W. Den 4:de geografiska student-exkursionen sommaren 1905. (Terra, 1906. v. 18, no. 1-2, p. 23-32; no. 3, p. 193-214; illus., no. 4, p. 247-58) *Title tr.:* The fourth geographic student excursion in the summer of 1905.

Leader's account of an excursion to Swedish and Norwegian Lapland by a group of teachers and students. The starting point was Tornio in Finland

(65°50' N. 24°15' E.), where grows "the world's northernmost oak tree." The group reached Kiruna (67°52' N. 20°15' E.) by way of Luleå in Norrbotten County and the iron-mining country around Gällivare and Malmberget. At Kiruna the party climbed to the top of the ore-bearing mountain of Loussavaara (729 m. above sea level). The village of Abisko and Lapp camps on the shore of Lake Torne are described. The group then traveled to Norway, where they visited Narvik and various fishing centers on the Lofoten and Vesteraalen Islands. Aarbystadtind on Andorga Island at the mouth of Salangen Fjord, the highest mountain peak on a Norwegian island (1175 meters above sea level), was seen. Fugl Island (70°13.5' N.), above Lyngen Fjord, was the northernmost point reached by the party. From Lyngen Fjord, foot tours were made to Siilasjärvi, a small lake on the border between Sweden and Finland. Geological, botanical, zoological, and ethnological data were gathered during the excursion.

Contains a study of rock drawings of reindeer and elk in the subarctic regions of Asia inhabited today by Yakuts and Tungus, along the banks of the Rivers Irtysh, Angara, Lena, Yenisey, and others, as far south as Lake Baykal and the Amur River. The pictures were incised on rocks or painted upon the rock surface with red mineral paint. They clearly reveal a naturalistic representation of the northern reindeer; hunt-

ing scenes, man riding reindeer, herds of domesticated animals are depicted, as well as scenes apparently of magico-religious significance, etc. These drawings done in the bronze and early iron age, bear witness that the domestication of reindeer is very old and was once widely known in southern Siberia. Later confinement of reindeer to the more northerly and arctic regions was due to the climatic changes in the post-glacial period. The elk also was domesticated. This paper is based upon the literature.

32086. SKELDING, W., and S. A. MARSHALL. Servicing aircraft in arctic conditions. (Royal Air Force Quarterly, Jan. 1953. v. 5, no. 1, p. 65-68, incl. illus.)

"Canadian inland airfields are subject to temperatures as low as -40° F. and to frequent blizzards. Servicing tents and the Herman Nelson combustion heater are used to keep serviced parts from freezing. Starting aircraft engines is facilitated by the Worth Oil Dilution System, by which gasoline is diluted with engine oil through a metering valve. The diluted oil in circulation is kept separated from the main oil supply. The need for continued research in cold weather lubricants and lubricating methods is indicated. Snowplows, blowers and man-power are available for prompt snow removal. Ski-wheel-equipped aircraft land regularly during the winter on frozen water ways and on the Arctic Ice Cap. Runways are usually rolled. Nutritional and clothing requirements of arctic crews are briefly discussed. The Winter Experimental Establishment of the R. C. A. F. has been organized for the study and testing of all cold weather equipment."—SIPRE.

Richardson, 23 Cornhill opposite the Royal Exchange. 270 p., illus., fold map. Translated from *Voyage pittoresque au Cap Nord*. Stockholm, 1805.

Contains narrative of a trip on which the author, a Swedish colonel, accompanied Giuseppe Acerbi, leaving Stockholm, Mar. 18, 1799, and reaching Nordkap (of which a detailed description is given) about the middle of July. The party followed the Swedish-Finnish border from Torneå (65°50' N.) to the mouth of the Palojoiki (68°20' N.), and then journeyed eastward to Enontekiö and northward to Kautokeino in Finnmark and other points in northern Norway, including Alta, Måsøy, and Magerøy, the island off the north coast of which Nordkap is the northern tip. An historical and cultural survey of the Laplanders is given (p. 121-48), and the plant and animal life in which the author was particularly interested, is noted throughout. Parts of the narrative tr. into Swedish appeared in *Terra*, 1903, v. 15, no. 1, p. 15-24, v. 16, no. 1-2, p. 81-98.

**32104. SLOVTSOV, PETR ANDRE-
EVICH, 1767-1843.** Istoricheskoe obozrênie Sibiri; kn. 1, s 1585 po 1742; kn. 2, s 1742 po 1823. (Izd. 2), S.-Peterburg, tip. I. N. Skorokhodova, 1886. 2 v. in 1: 23 p.l., xxi, viii, 326, iv p.; xxvi, 364, v p.; tables. **Title tr.:** An historical survey of Siberia; book 1, 1585-1742; book 2, 1742-1823. (2d ed.) First ed. was pub. in 1838-44, 2 v.

First attempt to compile a complete survey of the history of Siberia, covering the whole period of Russian domination from the foundation of the first Russian town on the Ob' River to the latter 19th century; based on published and unpublished materials and on author's observations during his stay and pedagogical activities in Siberia. The gradual expansion of the Russian rule as far as Kamchatka, Russian colonization, relations with the native tribes, changes of the administration system, missionary work, administrative divisions, economic conditions and development are described from the Russian nationalist point of view. Outstanding individuals in the administration and clergy, and the main events, among them plagues and revolts, are noted. The populated places among them Berezovo, Yakutsk, Anadyrsk, Chukotskiy Nos, Okhotsk and Nizhne-Kamchatsk are described (kn. 2, ch. 4), as well as rivers, among them the Ob' Yenisey, Lena and Kolyma with their tributaries and the rivers of Kamchatka (kn. 2, ch. 5). Fragmentary and second-hand remarks on the native population: Voguls, Ostyaks, Samoyeds (kn. 1, p. 2-6, 80-82), Kamchadals and Koryaks (kn. 1, p. 137-39) and Chukchis (kn. 1, p. 248-51) are included. Author's biography is given in introd. to kn. 1

(p. l. 3-23); collation of the 1st and 2d editions is appended to kn. 2. **Copy seen:** DLC (1st ed. v. 2 only; 2d. ed. v. 1-2).

**32105. SLUCHEVSKIĬ, KONSTANTIN
KONSTANTINOVICH.** Po Sîeveru Ros-sii; puteshestvie ikh imperatorskiĭkh vysochestv velikogo kniazâ Vladimirâ Aleksandrovicha i velikoi knâgini Marii Pavlovny v 1884 i 1885 godakh. Peterburg, 1886. 2 v.: 260, vi p., 65 plates, map; 244, vi p. 67 plates. **Title tr.:** In the Russian North; journey of their Imperial Highnesses the Grand Duke Vladimir Aleksandrovich and the Grand Duchess Mariâ Pavlovna in 1884 and 1885.

Contains account of a trip made by the royal couple, accompanied by an adjutant and the author of this book. The party's itinerary covered a large section of northern Russia between Peterburg, Pskov, Moskva, Nizhniy Novgorod, Solvychevodsk, Arkhangel'sk and the town of Kola. Among the places visited (in 1885) for military inspection, or simply out of curiosity, were several in the far North: Arkhangel'sk (v. 1, p. 246-60 and two plates, illus. of life of Samoyeds); Solovetskiy Island (v. 2, p. 1-23, description and illus. of the famous monastery), Kem', the northern coast of the Kola Peninsula with halts at Svyatoy Nos, Teriberka, Kildin Island, Port Vladimir, and the town of Kola (v. 2, p. 24-160). Notes are given on the fishing industry of the Murman coast and on the Lapp exhibition at Kola (v. 2, p. 108, three plates). On the return trip, the party visited Mezen'. The voyage into the Arctic was made on the clipper *Zabiûka* in the summer of 1885.

Contains report on 1,731 flight students exposed for 20 minutes to simulated altitudes of 26,000, 28,000 and 30,000 feet under conditions of severe cold (-40° to -50° F.) or such of room temperature, with about half the subjects taking exercises after reaching altitude. Those taking cold "flights" were dressed either in winter heavy-duty flying suits or the Colvinex electrically heated flying suits. Among the exercising group there was a higher incidence of pain under warm conditions and at all altitudes studied. Among the resting subjects there was no significant difference with temperature.

32110. SMIDT, ERIK. Naeringskredsløbet i havet ved Grønland. (Grønlandske selskab, Årsskrift 1952, p. 31-38) **Title tr.:** The food cycle in Greenland waters.

Contains popular account of food relations in marine animal and plant life, and of oceanographic conditions in Greenland waters conducive to abundance of plankton, the beginning of the cycle. Plankton investigations of Steemann Nielsen at Godhavn 1948 are noted. Direct utilization of plankton is sought as distinct from that through the food cycle with its attendant loss (90 per cent). Construction of a marine biological laboratory at Godthaab is noted.

Contains descriptions of *Cyclopinopsis* n. gen. and *C. curticauda* n. sp., a copepod, found in a plankton sample obtained by N. Novograblenov in Avacha Bay on the eastern coast of Kamchatka Peninsula.

Copy seen: MH-Z.

32118. SMIRNOV, S. S. On the question of glacial marine relicts in fresh-water fauna. (Akademiâ nauk SSSR. Comptes rendus (Doklady), 1938. nov. seriâ, v. 20, no. 6, p. 489-92, illus.)

Contains a study of geographic variation of a copepod species, *Senecella calanoides*, based on specimens from Ob' Bay, Gydan Bay, and Lake Yambu-To on Gydan Peninsula (table on p. 490), also known from Boris Vilkiyskiy Strait and from the mouth of the Lena River. This peculiar distribution leads to the conclusion that the time of penetration of *Senecella calanoides* from northern seas into fresh waters should be referred to the Pleistocene epoch, when a whole series of animals moved into fresh waters and remained there in relict water basins after the boreal sea transgression.

32122. SMIRNOV, SERGEĬ SERGEVICH, 1895-1947. Rudnye perspektivy Verkhofānskogo khrebtā. (Razvedka nedr, 1933, no. 20, p. 35-36) **Title tr.:** Ore prospecting in the Verkhoyansk Range.

Short popular sketch on ore prospecting; ores discovered to 1933 were: gold, silver, lead zinc, copper, arsenic, antimony, tin, tungsten, bismuth and molybdenum.

Copy seen: DLC.

32123. SMIRNOV, SERGEĬ SERGEVICH, 1895-1947, and others. Serebrnānye rudy Verkhofānskogo khrebtā. (Sovetskāiā geologiā, 1935, t. 5, no. 12, p. 1115-21) **Other authors:** M. M. Konstantinov, and G. I. Borisov. **Title tr.:** Silver ores of the Verkhoyansk Range.

Contains a summary of the study carried out in 1934, of the metallogeny of the Verkhoyansk Range in Yakutia, with data on rich silver deposits found on the northern slope near the Endybal mines and notes on mineralogical content of rocks including silver ores, their genesis, silver reserves and economic importance; includes also data on silver and tin deposits in the western part of the range. **Copy seen:** DLC; MH-Z.

32124. SMIRNOV, SERGEĬ SERGEVICH, 1895-1947. Tikhookeanskii rudnyi poīs v predelakh SSSR. (Pri-

roda, 1946, no. 2, p. 52-60) **Title tr.:** The Pacific Ocean ore zone in the U.S.S.R.

Contains an account of the mineral zone in easternmost Siberia, including Kamchatka, Chukotskiy Peninsula, and the basins of the Yana, Indigirka, and Kolyma Rivers. The zone is outlined briefly and its special characteristics given. The mineral resources are divided into 12 groups, including rare earths, iron, lead wolfram, molybdenum, bismuth, gold deposits, etc. The two most important centers of this mineral belt are noted: (1) Verkhoyansk Range, and (2) the region between Kolyma and Yana Rivers and Okhotsk Sea and Arctic Ocean. Mineral resources of this enormous region are discussed.

32126. SMIRNOV, V. I. Obzor arkhologicheskikh pamiatnikov Belomorskogo poberezh'ia Severnoi oblasti. (Sovetskāiā arkheologiā, 1937, no. 4, p. 169-210, 8 illus., fold. map) **Title tr.:** Review of archeological relics on the littoral of the White Sea in the Northern Province.

Contains description of natural conditions and archeological finds on the White Sea coast, along the so-called Zimniy Bereg and Letniy Bereg, the eastern and western sides of Dvinskiy Zaliv (65° N. 41° E.) at the head of which is now the city of Arkhangel'sk. Many skillfully made small flint artifacts were found: arrow and spear points, burins, knives, awls, borers, scrapers, hole-ornamented pots with concave bottom, numerous stone figures of animals, also some objects of bronze, apparently locally worked. The sites, 46 in all, were chiefly near the mouths of small rivers (indicated on map). They evidently represent summer fishing camps rather than permanent settlements, as the objects were found in sand dunes. Long (since 1876) known to archeologists, the sites, especially those on Rivers Z. Zolotnitsa and L. Zolotnitsa, have

been often explored, yielding large collections for several scientific institutions; the author's own, thorough investigation was made in 1934. The most typical finds are described and illustrated. The dating is difficult, because the finds belong to several cultural periods, approximately to the end of the neolithic and bronze age, or about the end of the second and the beginning of the first millenium B. C. Summary in French.
Copy seen: DLC.

32127. SMIRNOV, V. I. Stofânka na r. Kuznechikhe v g. Arkhangel'ske. (Akademiâ nauk SSSR. Institut istorii material'noi kul'tury. Kratkîe soobshcheniâ, 1941. vyp. 9, p. 90-98, 7 illus., plate) **Title tr.:** The site on the River Kuznechikha at the city of Arkhangel'sk.

Contains description of a neolithic site accidentally discovered on the outskirts of Arkhangel'sk in 1938. Stone implements, bone artifacts, potsherds were unearthed, as well as a great quantity of mammal, bird and fish bones, and well preserved pieces of wood. Later the northern base of the Akademiâ nauk continued excavations for scientific purposes. This paper describes the excavated objects of stone, bone, and ceramics. The animal bones were identified. A wooden plank covered with colored geometrical designs was found (see plate), the first of this kind in a neolithic site. The settlement is dated as of about 2000-1200 B. C.

32128. SMITH, A. U. Behaviour of fertilized rabbit eggs exposed to glycerol and to low temperatures. (Nature, Aug. 30, 1952. v. 170, no. 4322, p. 374-75) 9 refs.

Contains an account on experiments with eggs treated with glycerol at 37° C. and subsequently cooled to, and kept at various low temperatures. When cooled slowly to -79° C. or to -190° C., and thawed, a few of the eggs divided normally in culture and showed no abnormalities.

Copy seen: DSG.

32129. SMITH, AUSTIN E. Freezing to live. (Hygeia, July 1946. v. 24, p. 500-501, 557)

Contains a popular article on the uses of hypothermia (refrigeration) in medicine, as in shock treatment, anesthesia, prevention of gangrene, skin grafting, cancer therapy, etc. **Copy seen:** DLC.

SMITH, CHARLES H., see Douglas, G. V., and others. Notes localities visited Labrador coast 1946 and 1947. 1953. No. 28802.

32130. SMITH, DONALD A. Northern swamp tree frog, *Pseudacris nigrita septentrionalis* (Boulenger), from Churchill, Manitoba. (Canadian field-naturalist, Oct.-Dec. 1953. v. 67, no. 4, p. 181-82) 2 refs.

Contains notes on the finding of four specimens of this frog at Landing Lake, several miles south of the town of Churchill, Manitoba, in the open boreal forest-tundra transition zone. These are the first of the species recorded for the Churchill region. The vegetation of the area and the appearance of the frogs are described briefly.

32131. SMITH, DOROTHY A., and LESLIE SPIER. The dot and circle design in northwestern America. (Société des Américanistes de Paris. Journal, 1927. nouv. sér., t. 19, p. 47-55, text map) 40 refs.

A typical design used throughout the Alaskan Eskimo territory and sporadically among the central Eskimos is discussed. It is known also among Indian tribes of the Northwest: Tlingits (Chilkats), Tahltan, Haida, also other more southerly tribes, but any extended use in Siberia is considered doubtful. There is little evidence bearing on the antiquity of the design.

32132. SMITH, DURWOOD J. Constriction of isolated arteries and their vasa vasorum produced by low temperatures. (American journal of physiology, Dec. 1952. v. 171, no. 3, p. 528-37, illus. table) 32 refs.

Contains an account of observations on surviving, isolated arteries of swine and dog and one human bronchial artery. Cooling at 4° to 6° C./min. produced up to 35 percent constriction of swine carotid arteries. The flow through the vasa vasorum is decreased, partly owing to their constriction caused by the low temperature. Changes in the human material were very similar to the above. Prolongation of reaction time to epinephrine, histamine and acetylcholine at lowered temperature is also discussed.

Copy seen: DLC.

32133. SMITH, DURWOOD J. Variations in vascular reactivity produced by season, cold stress and immaturity; role

of thyroid and adrenal cortex. (American journal of physiology, Jan. 1953. v. 172, no. 1, p. 118-28, illus., tables) 31 refs.

Reactions of isolated adult swine carotid arteries to epinephrine or acetylcholine were shorter, those to histamine longer, in the winter than in the summer. The arteries of acutely cold-stressed pigs showed a prolonged reaction to histamine which, however, did not duplicate the curve of adult animals killed in the winter; the response to acetylcholine was unchanged. Various treated or aged arteries are also compared with those of winter-killed animals. **Copy seen:** DSG.

32134. SMITH, FRANK CLIFFORD GOULDING. Charting northern seas and harbors. (In: American Society of Photogrammetry. Panel on arctic mapping, pub. in Photogrammetric engineering, June 1953. v. 19, no. 3, p. 400-402)

Charts made by early explorers and surveys in Canadian-Arctic waters are inadequate for needs of increased shipping (particularly in the Hudson Bay route), defense, fisheries, oceanographic, and geographic studies. Air photos have made possible provisional charts covering nearly half the Canadian Arctic Islands area and charts of main harbors and are used extensively in present charting of coastlines. Ship-captains and hydrographers on northern vessels contribute information, and the U. S. Navy and Canadian Hydrographic Service cooperate in charting operations, the latter concentrating on urgent needs in Hudson Strait, Hudson Bay, Frobisher Bay, and elsewhere. Author is Dominion Hydrographer. **Copy seen:** DLC.

32135. SMITH, J. LORRAIN, and others. Clinical and experimental observations on the pathology of trench frostbite. (Journal of pathology and bacteriology, Cambridge, Eng., 1915-16.

v. 20, p. 159-90, plates 19-22) 9 refs. Other authors: J. Ritchie and J. Dawson. **Contains** an introductory part dealing with cold injuries in wars since Napoleon's Russian campaign, and previous studies of the problem; general observations on trench foot casualties of World War I (etiology, symptoms, prevention and therapy); a record of experiments with rabbits, with observations on the histopathology of experimental trench foot. Damage to blood vessels was found to be the main feature of the affliction. **Copy seen:** DSG.

32136. SMITH, LAWRENCE WELD, 1895-. Pathologic changes observed in human tissues subjected to subcritical temperatures. (Archives of pathology, July 1940. v. 30, p. 424-39, 4 fig.)

Contains a study on the effects of general or local hypothermia on (1) normal tissues, (2) tumor tissues, (3) metastatic tumor tissues. In normal tissue, significant changes were the exception rather than the rule; in the second group, temperatures of 40°-50° F. applied locally produced regressive changes, necrosis and occasional clearance of the tissue of tumor cells; in the third group, general cooling to 74°-90° F. produced similar changes but of a highly varying degree; these changes did not occur before patients were chilled for 96-120 hours. Bibliographical footnotes.

Copy seen: DLC.

32138. SMITH, PHILIP SIDNEY, 1877-1949. Certain relations between north-western America and northeastern Asia.

(In: International symposium on early man. Academy of Natural Sciences of Philadelphia, 1937. Early man, p. 85-92, plate (map))

Contains a geologist's description of Bering Strait, with its current, tidal range and drifting ice, a gap of 56 miles broken by three rocky islands, forming an easy traverse between two continents even for primitive man. Another much longer and more hazardous way by the Komandorskiye and Aleutian Islands is shown to require exceptional seafaring skill and courage. Geologic processes competent to have brought about land connections between Asia and America are summarized, and the existence of such connections concluded to have been possible. Map showing sea depths of the Bering area indicates the extreme shallowness of those waters. Alaska was an attractive land for a migrant people, because three-fifths of the territory at no time during the Quaternary was glaciated, and may well have been a place of refuge for animals, plants and men, forced out of other regions by the growing ice sheets of the Pleistocene. **Copy seen:** DLC.

32139. SMITH, SIDNEY. Frostbite of lungs. (Air surgeon's bulletin, June 1944. v. 1, no. 6, p. 17)

Contains a description of a rather rare syndrome caused by violent mouth breathing at temperatures of -40°F . or lower. The resulting fever is apparently due to resorption of autogenous protein debris in the lungs. Therapy aims at repression of cough which may further damage the affected lungs. Preventive measures are offered. **Copy seen:** DLC.

32140. SMITHWICK, REGINALD H., and C. W. ROBERTSON. The phenomenon of hyperreactivity: definition and illustrations. (Angiology, June 1951. v. 2, no. 3, p. 143-56, illus., tables) 5 refs.

Contains a discussion of the problem of hyperreactivity as judged by the cold pressor test and a postural test. Examples of hyperreactivity to these tests are given; the incidence of hyperreactivity among normal and hypertensive subjects is calculated and the value of cold pressor test as diagnostic tool in hypertension evaluated and discussed.

32145. SOBISKI, L. J. Canadian ocean weather ships. (Royal Society of Canada. Transactions, June 1952. Ser. 3, v. 46, p. 1-13)

Contains a brief history and description of the duties of weather ships in the North Atlantic and North Pacific. Between Dec. 1947 and June 1950, Canada and the U.S. jointly operated the Atlantic station "Baker" (56°30' N. 51°00' W.). This station, with others, was expected to carry out (1) meteorological services, (2) search and rescue services, (3) navigational aids and communications, and (4) miscellaneous oceanographic and scientific observations. In Dec. 1950 the North Pacific station "Peter" (50° N. 145° W.) was turned over to full Canadian operation, and Canada relinquished her Atlantic station. Two frigates, the *St. Catharines* and *Stonetown*, man the station for alternate six-week periods. Five meteorological observers carry out daily observations of surface weather, upper air, and upper wind. Surface and sea-water temperatures are continuously recorded, and experimental observations of rainfall are underway. Instruments used are described, and a summary of average summer and winter weather conditions given.

32148. SOCHAVA, VIKTOR BORISOVICH. O proiskhozhdenii flory severnykh poliarnykh stran. (Priroda, 1944. no. 4, p. 48-55) *Title tr.:* On the origin of the flora of arctic regions.

Contains discussion of paleogeography and paleobotany of northern regions in the light of geological history of the Arctic. Arctic flora is a rather complicated complex, including the following principal groups: (1) arcto-alpine species which were formed in the mountains of moderate regions in Cretaceous epoch; (2) arcto-alpine forms of arctic origin; (3) arctic forms of wide distribution (many circumpolar forms); (4) quasi-arctic forms connected with boreal group of moderate Tertiary flora; (5) boreal forms of post-glacial origin invading the southern section of tundra zone.

32149. SOCHAVA, VIKTOR BORISOVICH, and others. Obshchie cherty geograficheskogo rasprostraneniia lesnoi rastitelnosti Zapadnosibirskoi nizmennosti. (Vsesoiuznoe geograficheskoe obshchestvo. Izvestiia, 1953, t. 85, vyp. 2, p. 125-138, fold. map, text maps.) *Other authors:* T. I. Isachenko, and A. N. Lukicheva. *Title tr.:* General characteristics of geographic distribution of the

forests in the western Siberian lowland.

Contains an attempt at classification of the woody vegetation in the northern section of western Siberia (ca. 56°–70° N.), listing five principal geobotanical subzones: near-tundra, thin deciduous forest subzone, northern taiga, central taiga, southern taiga and deciduous forest subzone (map 2). Theories and schemes of various geobotanists are reviewed, and the peculiar features and relation of subzones discussed. Fold. map 4 (scale ca. 1:1,000,000) shows a more detailed division into 20 geobotanical regions.

32150. SOCHAVA, VIKTOR BORISOVICH. Prichiny bezles'ia gol'tsov Vostochnoi Sibiri i v Priamur'e. (Priroda, 1944, no. 2, p. 63–65) *Title tr.:* Woodless tracts of the bald mountains ("gol'tsy") of eastern Siberia and the Amur region.

Contains a summary of conclusions as to the causes of the absence of woody vegetation in mountainous tundras in general, and of the so-called "gol'tsy" (bald mountains) in particular. The chief cause is a combination of certain ecological factors, such as lack of light, thick snow cover, strong winds, physiological dryness, cold and stony soil, weathering of rock formations and the thick cover of lichens, which prevents the germination of the seeds.

Copy seen: DLC; MH.

32151. SOCHAVA, VIKTOR BORISOVICH. Tundra microrelief forms in Priamur'e. (Translated from: Tundrovye formy mikro-rel'efa v Priamur'e. Akademiia nauk SSSR. Priroda, no. 5–6, p. 107–109, 1944). Condensed and emended by I. V. Poiré. Washington, D. C., 1949. 5 l. mimeographed. diagr. (U. S. Geological Survey. Reports; open file series, no. 39)

Contains a brief discussion of spot medallions as found in the basin of the Amur River, translated and condensed from the original Russian paper (*Arctic Bibliography*, No. 16393). The spots are "columns of loamy ground in a layer of peat whose thickness is more than 1 m.," and which is overlain by sphagnum sod. The formation of spots depends on "stress in the ground resulting from the uneven freezing of the active layer and its adfreezing to the merzlota [permafrost]." This process is described in detail. A glossary of terms is included.

32152. SØRENSEN, FREDE. "Det Grønlandske Fiskerkompagni"'s virksomhed. (Grønlandske selskab. Årsskrift 1952, p. 122–25) *Title tr.:* Activities of the Greenlandic Fishing Company.

Contains account of this successful enterprise started in 1948. Modern deep-freezing methods are used at its land stations, and on the 287 br. ton factory ship *Greenland*; 1200 kg. filets are frozen on board in a day. Statistical data from several land stations on the West Greenland coast are given, and it is concluded that the fishing industry will increase quantitatively.

32153. SØRENSEN, HENNING. Further studies on ultrabasic rocks in Sukkertoppen District, West Greenland. On the formation of anthophyllite in ultrabasic rocks. (Dansk geologisk forening. Meddelelser, 1952. Bd. 12, hefte 2, p. 230–43, illus.) 6 refs.

"Two occurrences of ultrabasic rocks of bronzitic composition are described and their retrograde transformation is discussed. It is concluded that anthophyllite in the outer parts of the ultrabasic rocks and scapolite in crossing pegmatites are formed in a comparatively late stage of the transformation." The study was made on the west coast of Greenland north of Godthaab, with the Geological Survey of Greenland party in 1949. Summary in Danish.

32154. SØRENSEN, HENNING. The ultrabasic rocks at Tovqussaq, West Greenland; a contribution to the peridotite problem. København, C. A. Reitzel, 1953. 86 p. illus. 9 plates, 5 sketch maps, 4 tables. (Meddelelser om Grønland. Bd. 136, nr. 4) 58 refs.

Contains a detailed geologic and petrographic description of ultrabasic rocks on Langø Island, 64°51' N. 52°09' W. (Tovqussaq village and region) and rock types of nearby Tovqussaq Peninsula, southwest Greenland. The process of formation is discussed and chemical analyses of the rocks are given. Similar rocks in other parts of East and West Greenland and the Hebrides, and peridotites from orogenic zones are discussed. It is concluded that "the interpretation of the ultrabasic rocks as being products

of metamorphic rather than magmatic processes seems to have general validity."

Contains review of ice conditions ($59^{\circ}15' N.$ $43^{\circ}45' W.$ – $63^{\circ}15' N.$ $53^{\circ}30' W.$), stressing its incompleteness because of rapidly changing situations illustrated by difficulties which reporting ships encountered. Information is given on presence and location of the storis in specific positions and/or regions. Instructions are given for ice navigation supplementing those in Den Grønlandske lods 1948, (*Arctic Bibliography*, No. 3878), p. 86-100: Do not go into or out of the ice in fog. Radar though useful should not be depended on for complete or adequate information. When the heavily packed ice is encountered follow the ice border. The directional drift off southwest Greenland is northerly, hence circumnavigate north-south. Keep open water on one side of the ship, particularly in darkness or fog. **Copy seen:** DLC.

32171. SOKOL'SKAÏA, A. N. Chonetidae russkoï platformy. Moskva-Leningrad, Izd-vo Akad. nauk SSSR. 1950. 108 p., 25 illus., 12 plates. (Akademiia nauk SSSR. Paleontologicheskii institut. Trudy, t. 27) 88 refs. **Title tr.:** Chonetidae of the Russian platform.

Contains a monographic treatment of the fossil brachiopods of the fam. Chonetidae from Devonian and Carboniferous localities of the Russian platform region including Arkhangel'sk province. Data are given on geographic distribution, evolution and phylogeny (p. 5-17). The descriptive part (p. 18-93) contains a systematic list of 24 species and one variety, diagnoses of five new species, synonyms, dimensions, critical notes, data on habitat, list of localities and distributional notes. A brief key to the species is appended (p. 93-95).

Copy seen: MH-Z.

32172. SOLBERG, OLE MARTIN, 1879- Eisenzeitfunde aus Ostfinmarken Lapländische Studien. Christiania, Jacob Dybwad, 1909. ii, 147 p., 206 illus., 2 maps, plate. (Norskvidenskaps-akademi, Oslo. Skrifter, II, Hist.-Filos. Klasse, no. 7) **Title tr.:** Discoveries from the iron age in eastern Finmark; studies on Lapland.

Contains (p. 1-85) archeological investigation of sites on Kjølmoøy, an islet in Varangerfjord (70° N.), excavated by the author in summers 1907-1908. Fish, bird and animal bones were found, also some 1200 reindeer horn and bone artifacts, potsherds, and a few stone and metal objects, discussed in detail. The numerous reindeer horn fishing-hooks indicate the inhabitants' chief occupation. The islet apparently was used not for year-round habitation but spring-to-autumn fishing visits. Some of the excavated objects are compared with those of the recent Lapps (e. g. pot ornaments with the property marks). Author's investigation of some 34 graves in Nord-Varanger is also reported (p. 85-144); the bodies were wrapped in birch bark, placed in caves and holes in rocks, and covered with stone plates; most of the graves were looted; those better preserved with skeletons had stone, horn, iron and bronze objects and ornaments, often of the same type as those found on Kjølmoøy. Some artifacts were of eastern origin, belonging to the Permian iron age culture. The Varanger finds are dated for the early Middle

Ages and attributed to the sea Lapps. Lapp culture is discussed.

32173. SOLECKI, RALPH S., 1917- Archaeology and geology in northwestern Alaska. (Earth science digest, Feb. 1950, v. 4, no. 7, p. 3-7, 3 illus., text map) 5 refs.

Contains a short report on author's trip to Alaska for archeological field work in 1949. Sent by the Smithsonian Institution, he joined a U. S. Geological Survey party and investigated the area of the Kukpowruk and Kokolik Rivers (approx. 69°40' N. 163° W.) northwest of the Brooks Range. Some 192 archeological sites were traced. No stratified living places were located, the "sites" rather represent hunters' observation points on hilltops and knolls. The cores and lamellar flakes found at such places, almost on the surface, represent a cultural phase apparently pre-Eskimo and pre-Athapaskan, certainly over 2,000 years old and probably closer to 5,000 years. These flakes and cores are similar to those found on the University of Alaska campus at Fairbanks. Three geological provinces in northwest Alaska can be stated: the Brooks Range Province, the Arctic Plateau or Foothills Province, and the Arctic Coastal Plain Province.

Contains description of life in the Samoyed collective reindeer-breeding farm Kharp, situated at a little place called Koryagovka on the left bank of the Pechora at its delta. Twenty Samoyed families with about 3,000 reindeer formed an artel in 1930; today they have permanently built houses, and breed also cows and silver foxes. A festival called "Reindeer Day" is described.

A geographical outline of this recent Soviet acquisition, with scattered data on investigations and on the main features of the Sea of Okhotsk: its currents, ice conditions, offshore navigation, bottom morphology and climate.

Copy seen: DLC.

32177. SOLOV'EV, A. I. Kuril'skie ostrova. Izdanie 2-e, ispravlennoe i dopolnennoe. Moskva-Leningrad, Izd-vo Glavsevmorputi, 1947. 307 p. illus., maps (2 fold.), tables, 229 refs. *Title tr.:* Kuril islands; 2d edition, revised and enlarged.

In contrast with the first edition, the main data on the Sea of Okhotsk are concentrated in a new chapter 9: Morskoe priostrov'e (The sea off the islands) p. 79-89.

Copy seen: DLC.

32178. SOLOV'EV, D. K. Ékonomika okhoty v Pechorskoy kraie; iz materialov otráda okhotovedov Pechorskoy lesó-ékonomicheskoy ékspeditsii 1926 g. (Komi mu, 1927. god 4, no. 8, p. 31-38; no. 9, p. 12-24) *Title tr.:* The hunting economy in the District of Pechora; from materials of the hunting section of the Pechora Forest-Economic Expedition of 1926.

Contains a survey of the hunting production; utilization of the animals killed (Gostorg State Trading Enterprise); and number of firearms, dogs, and domestic animals. The economic importance of the hunting industry is outlined and statistics for 1922-27 given; there were 4,805 hunters in the forest region and 1,528 in the tundra. *Copy seen:* DLC.

32179. SOLOV'EV, D. K. O zverovodstve na Pechore. (Komi mu, 1927. god 4, no. 1-2, p. 3-20) *Title tr.:* On the raising of fur-bearers in Pechora.

Contains description, based on author's observations in 1926 of how the peasants of the villages of Kolva, Ust'-Usa and Novik-Bozh capture young arctic foxes, or ordinary foxes, raise them in cages and later kill them for furs.

Copy seen: DLC.

32180. SOLOV'EV, D. K. Okhotnich'e naselenie Pechorskogo kraia i ego byt. (Komi mu, 1927. god 4, no. 12, p. 31-37) *Title tr.:* The hunting population of the Pechora District and their way of life.

Contains a detailed enumeration of the settlements occupied by the Russians, Zyryans or Samoyeds. The hunting territory of the district represents an average of 769 hectares per hunter. The hunters may be divided into professionals (3,912 men), semi-professionals (1,699) and amateurs (762). The entire hunting region can be divided into nine sections, and characterization is given of each. About half of the hunters are organized into "artels" (or parties sharing the common take) of 3-8 persons. The hunters' customary laws and penalties for offenders are described.

Contains a description of this national park south of Great Slave Lake (58°-60°40' N. 111°30'-115°50' W.), the northernmost and largest (area: 17,300 sq. miles) in North America. It was set aside mainly for the protection of the northern bison, 8000 head of which lived in it in 1934. The topography, physiography and biogeography of its parts are dealt with in descending order of altitude.

32200. SPAULDING, ALBERT CLANTON, 1914- . The current status of Aleutian archaeology. (In: *Asia and North America, trans-Pacific contacts*, pub. as: Society for American Archaeology. Memoirs, no. 9; supplement to American antiquity, Jan. 1953, v. 18, no. 3, pt. 2, p. 29-31)

Contains critical evaluation of work done by Dall (1877), Jochelson (1909-1910), Hrdlička (1936-38), Quimby (1948), and Laughlin (1951). The most important discoveries were those of Jochelson: the Aleutian Islands were populated not from Asia but from the east, the Aleuts came to the islands many centuries ago, and no fundamental cultural changes occurred throughout the centuries. Detailed scientific archeology in the Aleutians is still in its infancy. An introduction sketches the Aleutians' geographical situation, vegetational character and possibilities of livelihood for man.

Copy seen: CaMAL.

32201. SPAULDING, ALBERT CLANTON, 1914- . Northeastern archaeology and general trends in the northern forest zone. (In: Johnson, F., ed. *Man in northeastern North America*, 1946, p. 143-67, map)

Contains a survey of the geographic and ecological features of the circumpolar area covered by coniferous forest; followed by an analysis of the cultural implications of the northern environments and a review of the archeology of the area. Hunting and fishing have always been its main economic activities, agriculture being almost impossible; the forest does not support a heavy population economically. Throughout the zone, in Eurasia and America, similar trends of cultural development are evident. The term "Arctic Culture", first proposed by Montelius and Rygh in 1874, is used to designate the culture of sites on the Scandinavian Peninsula, especially on the North Sea coast and the Baltic outside of the megalithic area, and from

Finland. The Arctic Culture is contemporaneous with the Scandinavian megalithic culture, although some sites show Arctic types mixed with bronze age tools, and even the Lapp Iron Age sites of early historic age preserve much of the Arctic complex. The most distinctive artifacts of the Arctic Culture are ground slate points and knives, and rock engravings. In Siberia, according to Zolotarev, is evidence for a widespread basic complex dependent on ice-fishing for winter livelihood, and using the pithouse, pottery and dog traction. In Kamchatka, the pithouse villages produced completely or partially polished celts and adzes, pestles, netsinkers, and chipped stone types; the bone implements, which were numerous at some sites, frequently resemble Eskimo specimens. In eastern Canada, limited exploration indicates that a complex related to the Laurentian and Red Paint is present; the Laurentian and related manifestations appear to be a relatively old and widespread complex in the Northeast. The author concludes: "The vague Siberian Neolithic and the total lack of information from most of the Canadian forest zones are an effective barrier to any final conclusions, and even if the suggested Old World origin of the Laurentian should ultimately prove to be correct, it would not solve the problem of Athabaskan cultural origins, nor would it shed much light on earlier migrations from Asia to America."

32202. SPEALMAN, CLAIR RAYMOND, 1909-. Body cooling of rats, rabbits and dogs following immersion in water, with a few observations on man. (American journal of physiology, 1946. v. 146, p. 262-66, fig., 4 tables) 7 refs.

Contains a report on rectal temperatures during immersion in water of 0° to 30° C. Rats and rabbits cool at a rate which is dependent on the temperature difference between body and water; between 20° and 30° C. thermal equilibrium is reestablished with body temperatures a few degrees above that of the water; in water of 15° C. and below, these animals become unconscious before thermal equilibrium is established. Large dogs do not cool in water of 20° C. and

above; in water of 15° C. and below, some cool but some maintain normal body temperature for five hours at 0° C.; they all become impaired when rectal temperature reaches about 27° C. Men do not appear to be much more resistant to cooling than large dogs, and show similar individual variation to cooling by water.

Copy seen: DLC.

32203. SPEALMAN, CLAIR RAYMOND, 1909-. A characteristic of human temperature regulation. (Society for Experimental Biology and Medicine. Proceedings, Oct. 1945. v. 60, no. 1, p. 11-12, tables) 2 refs.

Contains a report on experiments with subjects immersed up to the neck in water of 20, 25 or 30° C. Rectal temperatures were taken during and gastric temperatures toward the end of experiments; gastric temperatures were somewhat higher (about 36° C.) and in all cases constant, even when shivering occurred; 36° C. is considered a critical deep body temperature.

Copy seen: DLC.

32204. SPEALMAN, CLAIR RAYMOND, 1909-, and others. Influence of hemorrhage, albumin infusion, bed rest, and exposure to cold on performance in the heat. (Journal of applied physiology, Sept. 1948. v. 1, no. 3, p. 242-53, 5 tables) 15 refs. *Other authors:* E. W. Bixby, J. LaRue Wiley, and M. Newton.

Contains a report on varied experiments which demonstrated that removal of blood, confinement to bed and exposure to cold decreased the ability of the subject to carry out physical activities in the heat. Infusion of serum albumin improved performance. The various procedures also altered hemoglobin concentration and blood volume.

Copy seen: DLC.

32205. SPEALMAN, CLAIR RAYMOND, 1909-. Protection of feet immersed in cold water. (United States Naval Medical bulletin, Feb. 1946. v. 46, no. 2, p. 169-78, diagrs., tables) 7 refs.

Contains observations and information on the effects of immersing feet in water of 5°-25° C., the critical temperature above which damage does not occur having been established as 12°-14° C. The value of insulation; the effect of keeping the body warm, and of exercising; value of petroleum jelly as protective, etc., are studied.

Copy seen: DLC.

32206. SPEALMAN, CLAIR RAYMOND, 1909- . Temperature and blood flow in extremities immersed in water. (Society for Experimental Biology and Medicine. Proceedings, May 1944. v. 56, no. 1, p. 38-40, 2 fig.) 6 refs.

Contains an account on experiments with one hand immersed in water of different temperatures and various ambient air temperatures. At 16° C. air temperature, the difference between hand- and water-temperature was minimal when the water was moderately cold (15° to 20° C.); with higher or lower water temperatures the difference increases. Rising air temperature generally causes an increased difference between the temperature of the hand and the water; with very cold water, ambient air temperature has less effect on this difference. The relation of blood flow volume to these findings is discussed. Abstract by J. R. Learmonth in *Bulletin of war medicine*, Dec. 1944, v. 5, p. 236.

32207. SPECK, FRANK GOULDSMITH, 1881-1950. Inland Eskimo bands of Labrador. (*In: Essays in anthropology presented to A. L. Kroeber, 1936, p. 313-30*)

Contains investigation and point-by-point comparison of essentials of Eskimo and Indian ethnology in Labrador, chiefly based on author's fieldwork in the springs of 1934 and 1935, sponsored by the University of Pennsylvania. The topics investigated were: conceptions of the soul, the "owners" of animals (belief in spirits), the use of masks in dramatic pantomime, the psychotherapeutic function of games and contests, economic properties of the Eskimo and possible Indian borrowings in respect to housing, clothing, tanning, hunting and winter travel, the acquisition of herbal remedies derived from Indian sources, the existence of territorial rights (caribou hunting grounds); phonetic recordings, and a survey of archeological sites were made. Five focal points on the Labrador and adjacent coasts of northern Newfoundland were visited in 1934, and in 1935 the time was spent among the Naskapi of the St. Augustin band and with the mixed Eskimo families about Eskimo River and Bay. In this paper, the author gives a detailed description of the caribou-hunting activities of the Labrador Eskimos, the boundary division of hunting grounds between inland Eskimos and the Naskapis; he discusses Eskimo occupation of territory

south of Hamilton Inlet; and presents a comparative list of Montagnais-Naskapi and Labrador Eskimo traits in clothing and personal adornment, in tools and household articles, art, social customs and religion. The author concludes: (1) Eskimos were, until their extirpation by the Montagnais-Naskapi in the 17th and 18th centuries, permanent residents of the southern and southeastern interior and coasts of the Labrador Peninsula, within the Gulf of St. Lawrence as far west as the 65th latitude, and of northern Newfoundland; (2) a blending of Eskimos and Indian blood and culture had started to develop among the southern Labrador representatives of the groups; (3) there exists a dialectic relationship between Labrador Eskimos and those of Baffin Island; (4) the Eskimos preceded the Montagnais-Naskapi in the peopling of the Peninsula.

32208. SPECK, FRANK GOULDSMITH, 1881-1950. Labrador Eskimo mask and clown. (University of Pennsylvania. General magazine and historical chronicle, 1935. v. 37, no. 2, p. 159-73, 5 illus., plate)

Contains account of mask performances reported by native informants and observed by the author particularly at Nain, in 1934. Description of the masks is given, native names, materials and shape (usually made of seal-skin or dog-skin and to represent human faces). Their use and the performances, characterized as semi-formal competitive dramatic comedies and social festivals without religious meaning at present, are described. The social, sport and entertainment features are stressed. The restrictive influence of missionaries on these "survivals of ancient heathen festivals of the Eskimo" is noted, as having shorn them of certain religious associations and those connected practices of shamanism, wife-changing, etc. Comparative accounts of performances of Baffin, Iglulik and Greenland Eskimos are cited from Boas, Mathiassen and Birket-Smith.

32210. SPENCE, H. N. Helicopter operation, Knob Lake vicinity, Quebec-Labrador, season 1949. (Canadian surveyor, Jan. 1951. v. 10, no. 7, p. 2-8, illus., sketch map)

A geodetic survey was carried out July 11-Sept. 11, by a ten-man party (eight in survey group, two in helicopter) from the Canadian Dept. of Mines and Technical Surveys. The purpose of the survey was to obtain horizontal and vertical control required to map and to contour, from vertical air photographs, 18 standard inch-to-mile sheets. Importance of preliminary office work is stressed, and field operations are described. The helicopter (1) transported men and equipment to previously selected control points, and (2) carried out barometer traverses to obtain vertical control. For the latter operation the helicopter was equipped with floats. Twenty-nine days of effective flights and 321 landings were made in the 64 days of operation. Recommendations for future work are made, the helicopter being judged successful from a practical and economic standpoint. Summary in *Polar record*, July 1952, p. 537-39. *Copy seen:* DGS.

32211. SPETZMAN, LLOYD A. Plant geography and ecology of the Arctic Slope of Alaska. (*In:* Alaskan Science Conference . . . 1951. Proceedings, pub. 1953, p. 72-74)

Contains a summary of information from a study initiated in 1946 with the assistance of the U. S. Geological Survey, Arctic Research Laboratory, Arctic Institute of North America, and University of Minnesota. The topography, soils, and climate of the three physiographic provinces of the Arctic Slope, (1) coastal plain, (2) foothills, and (3) Brooks Range, is outlined. Then follows brief description of the plant communities in these provinces and their distribution, with statistics on the number of species, genera, and families of vascular plants.

32212. SPIER, LESLIE, 1893- . The distribution of kinship systems in North America. (Washington. University. Publications in anthropology, Aug. 1925. v. 1, no. 2, p. 69-88, 9 fold. maps) 88 refs.

Contains a study based on literature which gives a strictly empirical classification of kinship forms, without assertion of any historical connection between the systems of one class. The following kinship relations are investigated and mapped: cross cousins, parents' siblings, nephews and nieces, siblings (older brother, younger brother, etc.), grandchildren, parents and children, and grandparents. The following of the eight American types of kinship system are found in arctic America: Eskimo, Crow (includes Tlingit and Haida), Salish (includes Tinnah), Mackenzie basin (includes Yellowknife and Mountain), and Iroquois (includes Swampy Cree and Tsimshian). Among the Eskimos, cross cousins are called by the same name; there are four forms for parents' siblings; two terms for grandparents are used, and one for grandchild; siblings are usually differentiated according to relative age. The Alaskan Eskimos resemble the Chukchis and Koryaks in their tripartite division.

32214. SPIRIDONOV, NIKOLAI I. Na Kraĭnem Severe. Tekki Odulok. Moskva (?), Ogiz, Molodaiā gvardiā, 1933. 175 p. illus. (Biblioteka ėkspeditsiĭ i puteshestvii) *Title tr.:* In the far North. By Tekki the Yukaghir.

Contains a popular account of native

life and travels written by a native Yukaghir who received higher education and traveled a good deal on various occasions in the far North of Yakut A.S.S.R., Chukotskiy Peninsula and Kamchatka. He gives many details on the present-day life of natives in the Kolyma and Kamchatka, particularly Petropavlovsk, regions: on the role of dogs, hunting of fur-bearers and reindeer breeding; details from the life of the Yukaghirs (Oduls) and Yakuts living around Verkhne-Kolymsk and the River Yasochnaya (65° N. 151° E.). A visit to the Kolyma North and to the land of the Chukchis (to Mys Dezhneva) is described, also several other localities visited by the author where his fellow tribesmen, the Yukaghirs, still live; notes are given on their popular medicine, burial customs, etc. Many photographs of ethnographic interest on the life of Yukaghirs, Chukchis and Yakuts are reproduced. Foreword by V. G. Bogoraz introduces the author to the readers. Introduction by N. Firsov sketches the life of natives in the three northern districts, Bulunsk, Verkhoyansk and Kolymsk, since the Revolution and sovietization of their economy in 1925-1930. He mentions *inter alia* that in 1926-27 in these districts, there lived 13,145 Tungus, 1,281 Chukchis, 396 Yukaghirs and 17 Chuvantzy among a total population of 37,319. This book as a whole gives a realistic picture of the life of a dying-out primitive tribe.

Severnyi Poliūs. Leningrad, Izd-vo Glavsevmorputi, 1939. 181 p. illus. tables, fold. map. *Title tr.:* An historic race; sketches of the flight to the North Pole.

Contains a narrative of the air expedition to the North Pole in spring 1937, of which O. Ū. Schmidt was leader; the author, chief pilot; and M. V. Vodop'ianov, captain of the flagship. Preparations for the expedition, the successive laps of the flight with descriptions of the areas crossed, the polar area and the two days spent there by the fliers, return flight, reception in Moscow are described. The flight was organized for setting up the drifting polar station "Severnyi poliūs" headed by I. D. Papanin.

32217. SPITSYN, A. A. Shamanizm v otnoshenii k russkoi arkhologii. (Russkoe arkhologicheskoe obshchestvo. Zapiski, 1899. novaya seriĭa, t. 11, vyp. 1-2. Otdelenie slavĭanskoi i russkoi arkhologii. Trudy, kn. 4, p. 167-76) *Title tr.:* Shamanism from the viewpoint of Russian archeology.

Contains an investigation of golden plates decorated with animal figures, found in Siberia and preserved in the Hermitage collection at Leningrad. Among the figures represented is one half ox and half reindeer, kites, dragons, an eagle with human head, etc. A plate from the Pechora region shows three heads which cannot be clearly identified as of man, or bird, or animal. They are probably dragons known from Buddhist mythology and art. The northern people used the plates, however, as ornaments for their shaman costumes and considered the figures as shamanistic protective spirits.

Copy seen: DLC.

32218. SPITSYN, A. A. Shamanskiĭ izobrazheniĭa. (Russkoe arkhologicheskoe obshchestvo. Otdelenie russkoi i slavĭanskoi arkhologii. Zapiski, 1906. t. 8, vyp. 1, p. 29-145, 496 illus.) 11 refs. *Title tr.:* Shamanistic representations.

Contains a monograph on metal plaques used as pendants on the shamanistic costume or on the drum. They represent *sulde* or spirits of shamanistic ideology: fantastic figures (individually or in groups) of men, animals and birds, or hybrid creatures, e. g. with a human body and animal's head, and vice versa. Several hundred of such objects have been found in the basins of the rivers Ob', Irtysh, Vychegda and Pechora, not, however,

on the Yenisey, the boundary of such finds lying along the Chulyma River. This is an area inhabited by Ural-Altaic peoples. Usually whole treasures have been found in ancient sacrificial places or mounds. Large collections of such objects have been preserved in the Hermitage Museum at Leningrad, in the museums of Tomsk, Tobol'sk, and other places. A total of 496 objects are here classified, described and illustrated, in three groups, dated for the 3rd to 6th, 8th to 9th, and 10th to 14th centuries. The "golden age" falls in the second period. One large group of figures is called Vogulian (nos. 410-96).

32219. SPIVAK, T. L. Rentgenovskie dannye ob izmeneniakh kostei pri otmorozheniakh. (Vrachebnoe delo, 1941. god 23, no. 2, column 102-107, 8 illus.) *Title tr.:* Roentgenologic data on changes of bones after frostbite.

Contains a study of bone changes in frostbite, their extent and dynamics, and the relations between the clinical and X-ray findings. Structural changes of the bone were found in all degrees of frostbite and they developed according to the Sudeck type of osteoporosis; the bone lesions usually extended proximally beyond the frostbitten region, though in a few cases, of even severe frostbite, the bone beyond the demarcation line remained unchanged. In most cases the clinical picture corresponded to the extent, type and degree of osteoporosis.

32220. SPRULES, WILLIAM MEMBERRY, 1916-. The arctic char of the west coast of Hudson Bay. (Canada. Fisheries Research Board. Journal. July 1952. v. 9, no. 1, p. 1-15, illus.) 7 refs.

Contains results of a preliminary investigation of arctic char carried out Aug. 12-Sept. 13, 1948, near Term Point, N. W. T., on the west coast of Hudson Bay. A total of 216 fish were examined including salt and fresh-water varieties. Information relative to rate of growth, food, and spawning habits of sea-run and landlocked varieties was obtained. "The dependence of the Eskimo residents on this species as a food coupled with the

limited supply would seem to preclude the establishment of a commercial char fishery in this area."

32222. STAEMMLER, HANS-JOACHIM. Die Entwicklung der Stase in der terminalen Strombahn bei Anwendung von Kältereizen. (Virchows Archiv für pathologische Anatomie und Physiologie und für klinische Medizin, 1944. Bd. 312, p. 437-63) *Title tr.:* The development of stasis in the terminal circulation following the application of cold stimuli.

Contains a study on narcotized rats and rabbits with cold applied to the mesenteries. The blood vessels responded with a dilatation followed by a contraction and second dilatation; sensitivity was highest in capillaries followed by arterioles, arteries and veins; strong cold stimuli mostly caused dilatation of capillaries and contraction of veins, which results in a slow-down of peripheral circulation, and, when the stimulus is strong, in stagnation and a disturbance of blood composition. The slowing of circulation thus causes the formation of red and white thrombi and of stasis; the escape of lymph from the vessels is also partly due to these changes in circulation. Bibliography (8 items).

32223. STAEMMLER, M. Örtliche Erfrierungen, ihre pathologische Anatomie und Pathogenese. (Zentralblatt für Chirurgie, Nov. 7, 1942. Jahrg. 69, Nr. 45, p. 1757-62) 44 refs. *Title tr.:* Local frostbite, its pathological anatomy and pathogenesis.

Contains an account based on observations in man and on experiments, with consideration of degrees of severity, complications and sequels. Vasospasm of arterioles and arteries followed by peristasis or stasis, thromboses and injuries of the blood vessels, are considered prime factors in the pathogenesis, with tissue injury playing only a

subordinate role. Inflammation and gangrene are also discussed in their relation to severity and duration of exposure. **Copy seen:** DSG.

32224. STAEMMLER, M. Über a omische Folgeerscheinungen örtlicher Erfrierungen. (Virchows Archiv für pathologische Anatomie und Physiologie und für klinische Medizin, 1944. Bd. 312, p. 501-533, 17 figs.) 40 refs. **Title tr.:** Anatomic sequelae of local frostbite.

Contains a microscopic-anatomical study of the zone outside the gangrenous and demarcation area in third-degree frostbite of military personnel. Twenty-eight cases, largely of lower extremities were examined; occasionally far extending endarteritis obliterans was observed; also, frequently, serious damage of the nerves, sometimes coupled with inflammation of the perineurium; muscle atrophy; atrophy of the epidermis, often coupled with hyperkeratosis; occasional bone atrophy without traces of reorganization. The changes are apparently due to serious circulatory disturbances which continue long after the actual cold injury. **Copy seen:** DLC.

32225. STAGER, WALTER R. A flight surgeon's notes on the Aleutians. (Air surgeon's bulletin, Apr. 1945. v. 2, p. 122-24, 7 fig.)

Contains an account of the difficult conditions and climate of the Aleutian Islands, and resultant strain upon the morale; the sanitation and medical work; the emergency housing, equipment and apparatus built from discarded crates, wreckage, etc., including a steam room, shower, eyelane (for eye-testing), desk, dentist's cuspidor, sick-call cabinet, boot scraper, etc. **Copy seen:** DLC.

Contains results of work in Greenland, Iceland, and Scotland by a six-man (number varied) party, Apr.-May 1951, toward completion of previous years' study by members of this expedition organized by P.-É. Victor, 1948. Objectives in Greenland included: (1) a coastal - Central Station liaison; (2) extension of measurements on the south-east axis (levelled in 1950) which passes

over the crest of the inland ice; and (3) new measurements of gravimetric tides on both coasts. A chronological account of operations, description of methods, and outline of results are given, supplemented by tables and map. **Copy seen:** CaMAI.

32227. STAHL, PIERRE. Physique atmosphérique. (In: Expéditions polaires françaises. Expédition arctique, 1948-1951. Campagne au Groenland 1950; rapports préliminaires, 1952. Série scientifique, no. 15, p. 87-100, tables) **Title tr.:** Atmospheric physics.

From June 8 to Sept. 7, 1950, the author carried out a program which included studies of the electrical field on the inland ice, ionization of the air, electrical conductivity of the air, vertical electric currents in the ice, air pollution, meteorology, altimetry, and optical phenomena of the atmosphere such as halos and auroras. Tides were studied at Port Victor and Quervain Bay (north of Jacobshavn, West Greenland) during Sept. and early Oct. Tables give stations mentioned in the report, their exact location and altitude, and a résumé of observations with days when and places where made. Instruments used and recommendations for further studies are included. **Copy seen:** CaMAI.

32228. STAHL, PIERRE. Physique atmosphérique. (In: Expéditions polaires françaises. Expédition arctique, 1948-1951. Campagne au Groenland 1951; rapports préliminaires, 1953. Série scientifique no. 16, p. 77-79, illus.) 4 refs. **Title tr.:** Atmospheric physics.

Objectives and methods of study, June-Sept. 1951, on the Greenland inland ice were similar to those of 1950 presented by the author in the item above. Brief notes are given on work done (but few results) in: (1) the terrestrial electrical field; (2) ionization of the air; (3) electrical conductivity of the air; (4) air pollution; (5) penetrating radiation; (6) meteorological observations; (7) altimetry; and (8) optical phenomena of the atmosphere. **Copy seen:** CaMAI.

32231. STANTON, WILLIAM J. Economic aspects of recreation in Alaska. Washington, D. C., 1953. 191 p. illus. maps. (U. S. National Park Service. Alaska Recreation Survey, pt. 1, v. 1)

The first of a proposed series of volumes to report the work of the Alaska Recrea-

tion Survey. The purpose of study is to assess the importance of the tourist industry in the Alaskan economy, estimate its future potential, to show the native and economic importance of the recreation resources. Other volumes will deal specifically with subjects here treated generally: archeology, history, biology, geology, planning and development. This volume, result of field work 1951-52, gives Alaskan history followed by chapters on the following subjects, stressing recreational implications of each: natural resources (physiography, climate, sea and land resources, wildlife and plant life, etc.); human resources; mining; manufacturing; agriculture; retail and wholesale distribution; tourism and tourist accommodations. Author suggests that the tourist trade may become the principal industry of Alaska. A recommended study of passenger transportation is outlined and other needed studies noted. Well illustrated with maps and photographs. Statistical tables supplement the text.

Copy seen: CaMAI.

32232. STARIKOV, G. F., and P. N. D'ĬAKONOV. Lesa poluostrova Kamchatki. Moskva-Leningrad, Goslesbumizdat, 1952. 118 p. illus., diagrs., tables, map. 45 refs. *Title tr.*: Forests of the Kamchatka Peninsula.

The rise of the fishing and crab industry, and development of state and collective farms and reindeer breeding, with a great amount of construction, have so raised the demand for lumber in Kamchatka that since 1929 large quantities of timber are imported annually from other parts of the U.S.S.R. Of the extensive local resources, only the forests in the Kamchatka River valley have been utilized. In 1941, the Ministry of the Fishing Industry, responsible for forests in Kamchatka, sent a complex expedition, directed by "Giprorryba" (State institute for the planning and reconstruction of fishing industry undertakings) to investigate the timber capacity of Kamchatka forests. The results of this expedition (headed by the authors?) are summarized here and supplemented by data of previous investigations, including the extensive work of the Academy of Sciences' expedition in 1935 and the authors' investigations in the period 1936-1948.

The nine chapters deal with (1) physico-geographic conditions; (2) in-

vestigation of forest vegetation; (3) main trees and bushes (p. 25-46): from the 828 species of Kamchatka flora, 17 arboreal plants of greatest practical importance, are briefly described, with Latin name, peculiar features and occurrence indicated. Chap. 4 gives characteristics of forests and bush thickets (p. 46-79): forest types and composition, growth data for main species. Chap. 5 concerns wood fuel resources; (6) natural reforestation; (7) the protective function of the arboreal vegetation; (8) felling methods; (9) prospects of development of the timber industry and silviculture.

The forests of Kamchatka, if properly utilized, can yield over four and a half million cu. m. of timber annually and meet all the peninsula's needs, authors conclude. *Text map* (p. 22) shows their itineraries and areas of investigations.

Contains a systematic index of bark borers of the fam. Ipsidae; followed by an introduction (p. 13-83) giving characteristics of the family and data on morphology, classification, geographic distribution, types of damage to wood (p. 27-29), ecology, distribution by the types of forests, economic importance and the control of these insects (p. 64-71) and a bibliography (378 items). In the special part (p. 84-444) are keys to the subfamilies, sections, genera and species; descriptions of over 300 species (five described as new) of which 299 species are native to the U.S.S.R. Literature citations, data on damage to trees, and geographic distribution are given. Indexes to Russian and Latin names of the insects, and to host plants are appended (p. 445-61). Some species native to northern European Russia and Siberia are included.

32237. STARTSEV, GEORGIĬ A. O zaural'skikh zyrfanakh. (Komi mu, 1926. god 3, no. 1-2, p. 46-50) **Title tr.:** On the Zyryans behind the Ural Mts.

Contains an account of the Zyryans of the Berezov and Obdorsk districts where, recent immigrants from the Pechora, they total 4,950 persons, as against 18,308 Ostyaks and 11,658 Samoyeds. The Zyryans are better educated, their children attend schools, and they know how to make profit from the less civilized natives. Many Zyryans are reindeer

breeders; medical and veterinary aid is poor; syphilis and trachoma are rare, the common ailments being colds, rheumatic pains, boils, intestinal and tape-worms, the last from eating raw meat and fish. Marriage and social relations are noted: Zyryans intermarry with Samoyeds, but not with Ostyaks. In the schools, the Zyryan children are taught in Russian only, Zyryan books and newspapers are rare in these districts.

Sbornik statef, 1938. t. 1, p. 129-44) *Title tr.:* Nymylans-Alutores. Contribution to the question of the origin of reindeer breeding among the southern Koryaks.

Contains description of Alutores, a Koryak tribe of some 2,000 persons living along the shore of Bering Sea from Korf Bay to the village of Tymlat. More than half of them keep reindeer, their other occupation is fishing and hunting of sea animals. Reindeer breeding among these people is only about 100-200 years old and their family life shows matriarchal trends. The genuine old-time reindeer breeders are of the Chavchuvnes tribe: these people do not practice hunting, and their fishing is only an auxiliary enterprise; they once possessed large reindeer herds but no dogs, and formerly often fought with Alutores who tried to seize their herds; they have a patriarchal organization. The Koryak people, as a whole, consist of eight linguistic groups, and the nomadic Chavchuvnes comprise about 50 percent of the entire population. Their dialect has been adopted as the Koryak literature language. These dialects are described and examples of words of the two dialects mentioned. Summary in French.

32248. STEFANSSON, VILHJALMUR, 1879- . The Arctic. (Air affairs, 1950. v. 3, no. 2, p. 391-402)

Powerful nations face each other across the hitherto impassable Arctic Ocean, now crossable by airplane and submarine, offering the shortest routes between the opposing countries, and making the area the possible center of air and undersea strategy in case of war. Diametrically opposed attitudes of United States-Canada and the Soviet Union are noted on the defense and development of

their portions of the Arctic. The former depends upon a "defence-by-desert" theory and is pessimistic about the development of northern North America, whereas the Soviet Union is more optimistic, prefers a "defence-by-colonization", and has an aggressive program of northward colonization. The population trend in the United States-Canada area is southwestward, and in the U.S.S.R. towards the east and north. The distribution of population differs widely in the two areas: north of the Arctic Circle in the U. S.-Canadian area, there are only about 10,000 people, whereas in the Soviet Union there are 500,000 persons. Of the U. S.-Canadian population of 165 million people, over 99½ percent live south of Edmonton, Alberta, Canada, whereas more than 75 percent of the 200,000,000 inhabitants of the Soviet Union live north of that city. Competition in both peace and war, is between a southward-looking group on one side, and a northward-looking power on the other. *Copy seen:* DLC.

32249. STEFANUTTI, PIETRO. Variazione di tecnica nel trattamento marconiterapico dei congelati. (Policlinico. Sezione pratica, Apr. 1941. Anno 48, num. 14, p. 626-27) *Title tr.:* A variation in the technique of shortwave treatment of frostbite.

Article is based on experience in the Greek campaign and deals with new treatments of cold injuries: sympathetic block and short-wave therapy. A modified technique of the latter is described and superior results claimed for it.

STEGMANN, B. See Shtegman, Boris Konstantinovich.

32250. STEIN, ROBERT, 1857-1917. Besiedelung der Antarktis durch Verpflanzung einiger Eskimo-familien. (Petersmanns geographische Mitteilungen, 1909. Bd. 55, no. 11, p. 374) *Title tr.:* Colonization of the Antarctic by transplantation of some Eskimo families.

Contains note on proposal made by Robert Stein in the *Washington Herald*, Oct. 18, 1909, that some six Eskimo families be taken to Victoria Land by Capt. Scott's projected Antarctic Expedition.

Flocks of penguins would contribute to their food supply. Other islands (South Shetland, Louis-Philippe Land and Graham Land) are noted as probably suitable for Eskimo colonization. The greatest obstacle to success of the project is anticipated to be lack of foresight on the part of the Eskimos in storing food supplies: the penguins move north during the polar night, and the Antarctic sea animals are not in such abundance as those of the Arctic. *Copy seen:* DLC.

32251. STEIN, ROBERT, 1857-1917. Eskimo music. (*In:* The White world, New York, 1902. p. 337-56, 40 music notes)

Contains Eskimo dances and songs (mostly on animals), noted down at Cape York and Fort Magnesia (near Cape Sabine) in northwest Greenland, where the author accompanied a Peary expedition in 1900-1901. The performance of the dances and songs and the collector's experiences are described: in two years he noted down 38 songs and their melodies. The words, mostly archaic, were hardly understood by the singers, probable translation is given here along with the texts. *Copy seen:* DLC.

32252. STEINER, FRANZ BAERMANN, 1909- . Hundepfer und Wehengeständnis, ihre Beziehungen zum nord-eurasischen Wiedergeburtsglauben. (*In:* Congrès International des Sciences Anthropologiques et Ethnologiques. 2d, Copenhagen, 1938. Compte rendu, 1939. p. 301-303) *Title tr.:* The dog sacrifice and confession at parturition, its relation to the north Eurasian beliefs on reincarnation.

Contains résumé of a paper on beliefs in reincarnation found among several arctic and subarctic peoples (e. g. Lapps, Samoyeds, and Yeniseians). A dog must be sacrificed at childbirth and the mother confess the father of the child, to relieve pains of birth. Both practices, also divination while naming the new-born, are said to have some connection with belief in reincarnation.

32253. STEINER, GOTTHOLD, 1886- . Freilebende Nematoden von Nowaya-Zemlja. (Zoologischer Anzeiger, 1916. Bd. 47, Heft 2-3, p. 50-74, illus.) *Title tr.:* Free-living nematodes from Novaya Zemlya.

Contains a biometric study of 27 nematodes, in 13 genera, living on mosses,

collected by Richter in the region of Matochkin Shar, in July 1907. Three new species: *Cyatholaimus ornatus*, *C. micoletzkyi* and *Ethomolaimus arcticus* are described. **Copy seen:** MH-Z.

32254. STEINHAUS, ARTHUR H., 1897-, and **G. WENDHUT.** Pulse rate, blood pressure and vision after a cold hip bath. (Journal of applied physiology, May 1953. v. 5, no. 11, p. 677-82, table) 7 refs.

A cold hip bath was administered to healthy, young males a total of 43 times and compared with conditions on bathless days. All the circulatory changes were observed 45 minutes after the bath; some of them persisted for two hours. In general, all the observed circulatory changes shifted somewhat the burden of maintaining blood pressure from the heart to other mechanisms. The bath improved visual efficiency under conditions of very low illumination, for at least one hour. **Copy seen:** DSG.

32255. STEINHOFF, ILSE. Dreizehn Monate bei den Polareskimos von Thule. Nach Erzählungen des französischen Forschers Dr. Jean-Noël Malaurie. (Atlantique, Länder, Völker, Reisen, Feb. 1953. Jahr 25, Heft 2, p. 75-80, 5 illus. on plates) **Title tr.:** Thirteen months among the Polar Eskimos of Thule. From narratives of the French explorer Dr. Jean-Noël Malaurie.

Contains account of Malaurie's winter sojourn 1950-51 at Siorapaluk, a settlement of 40 Eskimos (eight snowhouses) 200 km. north of Thule in northwest Greenland. His sledge trips and survey work along the coast of Inglefield Land, across Kane Basin to northern Ellesmere (Grinnell Land, Bache Peninsula) are sketched. His psychological tests of the Eskimos at Siorapaluk are noted, and description is given of their mentality, entertainments and dances, their story telling (two texts are included), eating habits and food (e. g. *kiviak*, fermented bird meat), family life and sex, attitude toward Whites and civilization, etc. In the Thule region there are 342 Eskimos and mixed bloods, including two descendants of Peary expedition personnel. **Copy seen:** DLC.

32256. STEINITZ, WOLFGANG, 1905-. Das Lautsystem und die finnische Transkription dreier westsibirischer Eingeborensprachen: des Ostjakischen, Wogulischen und Jenissei-

Ostjakischen. (In: Congrès International des Sciences Anthropologiques et Ethnologiques. 2d, Copenhagen, 1938. Compte rendu, 1939, p. 375-76) **Title tr.:** The sound system and the Finnish transcription for three West Siberian native languages: Ostyakian, Vogulian, and Yeniseian.

Contains criticism of the transcription for these native languages used by the Finnish linguists; their transcription is very complicated, because the Finns wanted to show all the shades of the pronunciation and did not study the whole system of sounds, or phonemes and its variation; e. g., Karjalainen found in the Kasym dialect of Ostyakian, 21 vowels of different quality, there are however, only ten vowel phonemes, so the vowel system is not particularly complicated. **Copy seen:** DLC.

32257. STEINITZ, WOLFGANG, 1905-. Die neuen Literatursprachen der sibirischen Eingeborenen (ugrische, samojedische, tunguso-mandschurische, "paläosiasische" Sprachen). (In: Congrès International des Sciences Anthropologiques et Ethnologiques. 2d, Copenhagen, 1938. Compte rendu, 1939, p. 377-78) **Title tr.:** The new literature languages of the Siberian natives (Ugrian, Samoyedic, Tungus-Manchu and "Paleoasiatic" languages).

Contains résumé of an account of Soviet policy toward the native languages of the minority peoples: During 1930-38, twelve "literature languages" for north Siberian natives were set up by the Institute for the Peoples of the North in Leningrad, adopting the Latin alphabet with numerous diacritical signs; from several dialects, one was chosen as the "literature language" to be used in schools and for the printing of books and newspapers in the native languages. In 1937 this "northern alphabet" in Latin characters was abolished and replaced by the Russian alphabet, on the ground that learning two different alphabets was too much for unadvanced peoples and Russian had to be learned anyway, as the main "educational language". **Copy seen:** DLC.

32258. STEINITZ, WOLFGANG, 1905-. Totemismus bei den Ostjaken und Herkunft der Ostjaken und Wogulen. (In: Congrès International des Sciences Anthropologiques et Ethnologiques. 2d, Copenhagen, 1938. Compte rendu, 1939, p. 303-304) **Title tr.:** Totemism

among the Ostyaks, and the origin of Ostyaks and Voguls.

Contains résumé of the author's views on the controversial question of totemism among the Ob-Ugrians: he sees relics of totemism in the social organization of Ostyaks, e. g. the presence of two exogamous phratries, *mäs* and *por*; the original ancestor imagined as having both human and animal shapes and formerly was worshipped. The phratry *mäs* is considered to be superior and evidently is of Finno-Ugric origin; the people belonging to the phratry *por* are considered silly and wild, and probably originated from the "old Siberians". A similar situation exists also among the Voguls.

32259. STEINMANN, GUSTAV, 1856-1929. Zur Urbesiedelung Amerikas. (International Congress of Americanists. 21st, Part I, The Hague, 1924. Proceedings, 1924. p. 63-70) **Title tr.:** The ancient land-settlement of America.

Contains discussion of when and how people from the Old World moved into the American continent. There is no proof of the existence of man on the American continent in the pre-glacial period, and no remains of other races than Indians found. Two possible ways of entry may be considered: one over Bering Strait, the other by Greenland. Most probably the first people, at the stage of primitive hunters, followed the same route as the Asiatic animals and moved in via Bering Strait on a land bridge. The time may be either the pre-glacial, or post-glacial period, some 30-40,000 or 6-8,000 years ago. Speculations are made as to the length of time needed for development of these primitive hunters to the high culture of the Mayas and Incas.

STEJER, F. A., see Wedow, H., and others. Prelim. summary uranium and thorium, Alaska. 1953. No. 32864.

32260. STEJNEGER, LEONHARD HESS, 1851-1943. Analecta ornithologica I-III, V. (Auk, 1884, new ser., v. 1, no. 2, p. 166-73; (II) no. 3, p. 225-36; (III) no. 4, p. 358-67; (V) 1885, v. 2, no. 2, p. 178-88) **Title tr.:** Ornithological fragments, I-III, V.

Contains miscellaneous ornithological notes dealing mostly with synonymy,

validity of scientific names, geographic distribution, etc. Pt. I includes notes on *Turdus aliciae*, native to the Chukotsk Peninsula, northeastern Siberia; pt. II, a description of *Larus schistisagus* n. sp. inhabiting Bering Island and the eastern coast of Kamchatka (p. 231), and notes on various birds of Bering Sea and Arctic Ocean. In pt. III are notes on arctic gulls of the genus *Larus* and criticism of E. W. Nelson, *Birds of Bering Sea*, 1883 (*Arctic Bibliography*, No. 12172). Pt. V has notes on gyrfalcons divided in two distinct species, the "white" and the "brown", the latter divisible into three geographic races: Scandinavian form, Iceland-Greenland form, and Labrador form. Pt. IV does not contain arctic material.

Copy seen: MH-Z.

32260A. STEJNEGER, LEONHARD HESS, 1851-1943. Notes on the genus *Acanthis*. (Auk, 1884, new ser., v. 1, no. 2, p. 145-56)

Contains a discussion of the genus *Acanthis* and its synonymy, a synopsis of seven species and varieties of redpolls and a table of comparative measurements; includes *A. hornemanni* with var. *exilipes* native to Greenland and "arctic America" and *A. linaria* with var. *palescens*, *holboellii* and *rostrata* distributed in "northern portion of Palaearctic", arctic Europe, and northern America.

Copy seen: MH-Z.

STEMLER, F. W., see Hiestand, W. A., and others. Effect water temp. on survival from drowning. 1952. No. 29637.

32261. STENIN, P. von. Das Gewohnheitsrecht der Samojeden. (Globus, 1891. Bd. 60, p. 170-74, 186-90) 20 refs. **Title tr.:** The customary laws of the Samoyeds.

Account of the customs and laws of the European Samoyeds, based on literature. It deals with: observation of exogamy in the male line, levirate, bride purchase and wedding customs, polygamy, divorce, personal names, patriarchal form of family, personal property and rules of inheritance, work of men and women, status of women and numerous tabus for the womenfolk, care for orphans, use of a stamp with family mark as a signature, payment for manual work, exploitation of Samoyeds by Russian and Zyryan merchants and the Samoyeds' occasional retributive measures, collective hunting parties (*artels*), fighting and murder cases

(mostly under influence of alcohol), suicides, the moral code, cases of stealing, social organization (names and legends of origin of several sibs are given). The Samoyedic "aristocracy," the functions of a chief (*starshina*) and a shaman are described; heathen forms of an oath are discussed and numerous examples quoted.

32264. STEPANOV, N. N. Trudy I. V. Stalina po iazykoznaniiu i voprosy istorii narodov Severa. (Leningrad. Universitet. Uchenye zapiski, 1953. no. 157, Seria fakul'teta narodov Severa, vyp. 2, *Iazyk i istoriia narodnostei Kraĭnego Severa SSSR*, p. 35-59) **Title tr.:** I. V. Stalin's works on linguistics and the problems of the history of the peoples of the North.

The effects of Stalin's criticism of N. Ā. Marr's theory and of his (Stalin's) principles of linguistics, proclaimed in 1950 are discussed, and illustrated by critical comment upon works of S. A. Tokarev, A. N. Bernshtam, and, partly, of A. P. Okladnikov, whose investigation of the history of Yakuts had been influenced by an erroneous theory of Marr's. A short survey is given of Soviet investigations in the history of the peoples of the North. Problems are noted which Stalin's tenets raise in further historical research on the Yakuts, Yukaghirs, Samoyeds, Ostyaks, and other northern peoples. Laudatory remarks on Soviet policy and rule in the North are added, as well as numerous refs. in footnotes.

Copy seen: DLC.

32265. STEPANOV, V. N. O sushchestvovanii gipoteticheskikh zemel' Sannikova i Andreeva. (In: Vsesoiuznyi geograficheskii s'ezd. 2d, Leningrad, 1947. Trudy, 1949, t. 3, p. 321-329, fold. map) **Title tr.:** On the existence of the hypothetical Sannikov and Andreev Lands.

Contains summary of information on both lands, reported from time to time in the past, the first north of the East Siberian Islands, the second, west of Vrangeli Island. Data on the bottom morphology of Laptev Sea and on the marine erosion of the coasts are analyzed. Conclusion is offered that both lands actually did exist, but, being formed chiefly of fossil ice, they were destroyed by action of the sea, wind, etc., and disappeared like certain other small islands of the New Siberian archipelago.

STEVENSON, DONALD H., see Nelson, E. W. Descrip. new lemming. 1929. No. 30964.

STEWART, BENJAMIN DUANE, 1878- . Mining in Alaska. See Alaskan Science Conference, Nov. 1950. Proceedings, 1951. No. 20117.

32270. STEWART, THOMAS DALE, 1901- . Anthropometric observations on the Eskimo and Indians of Labrador. Chicago, 1939. 163 p., tables, 16 plates, map. (Field Museum of Natural History. Anthropological series, v. 31, no. 1. Pub. 462) 100 refs.

Contains a monograph on Labrador's native population: analysis of metrical and non-metrical observations on living Eskimos and Indians, and on Eskimo skeletal remains; Eskimo affiliations and physical changes due to altered diet; theories of Eskimo and Indian migrations; and records of contact between Europeans and the natives of Labrador. The material and data evaluated were those secured during the 1927-28 Rawson-MacMillan Sub-Arctic Expedition of the Field Museum, by William Duncan Strong: measurements of 137 living Eskimos of both sexes and 18 Montagnais and Naskapi Indians (excluding obvious mixed bloods and sub-adults), also 32 measurable skulls and other skeletal remains from Eskimo graves. Material from the Peabody Museum and several European museums are also included. Comparisons of skeletal series show the closest metrical resemblance to be between those of Labrador and Greenland Eskimos. The physical differences between the modern and ancient Eskimos of Labrador (change in head shape and decrease in stature) are due for the most part to altered diet. The northern bands

of the Montagnais-Naskapi differ from those to the south, and are less distinct from the Eskimos.

Copy seen: DSI-M.

32271. STEWART, THOMAS DALE, 1901- . New measurements on the Eskimos and Indians of Labrador. (American journal of physical anthropology, 1936. v. 21, suppl. p. 10)

Contains abstract of report on anthropometric measurements done previously by Hallowell, by Lee and Sornberger (in 1891), and more recently by W. D. Strong who measured, in 1927-28, as a member of the Rawson-MacMillan Field Museum Expedition to Labrador, 137 Eskimos, also 28 Indians. The Indians measured by Strong (Barren Ground and Davis Inlet bands) seem to differ considerably from those reported by Hallowell from southern Labrador. It is possible that more European blood is represented in Hallowell's series. The earlier and recent measurements on the Eskimos are in fairly close agreement.

Sharply critical review of P. M. Tyler's *Russia's mineral potential*, 1951, q. v.

Contains data on the activities of the Lenskoi Gold Mining Co. in Lena River placer-gold fields, the discovery of the Kolyma River goldfield, and the Amur and Kamchatka Peninsula gold areas. Based on author's prospecting experience in Russia 1912-1917.

Copy seen: DLC.

32274. STODDARD, H. A. The problems of Alaska road-builders. (Western construction news, Feb. 1952. v. 27, p. 71-73, illus., map)

"A survey is presented of the difficulties arising from road construction across muskeg and permafrost in Alaska. The organic soils range from 2-20 ft. in depth and occur in patches up to 3000 ft. across. The unstable material is usually excavated and replaced by selected granular material where deposits are not more than three ft. deep. Fill is placed on thick deposits of organic soil to raise the road surface about four ft. above the general ground level. Considerable settlement often occurs and surfacing is frequently not applied until the underlying soil has become consolidated. Some two ft. of granular base material is generally considered adequate on silty soils to ensure stability during the spring thaw."—SIPRE.

Copy seen: DSG.

32278. STONE, KIRK HASKIN, 1914- . Aerial photographic interpretation of natural vegetation in the Anchorage area, Alaska. (Surveying and mapping, July-Sept. 1950. v. 10, no. 3, p. 197-207, illus.)

Vegetative "keys" for the Anchorage area were prepared by a land-classification party in early summer 1946. Construction of the keys is explained and physical geography of the region briefly summarized. Within the area seven types of natural vegetation can be recognized and identified on small scale aerial photographs. The outlines, or "keys," of distinguishing photographic characteristics of each type are given, each type illustrated by stereogram. Previously published in the *Geographical review*, July 1948 (*Arctic Bibliography*, No. 17062). **Copy seen:** DGS.

32279. STONE, KIRK HASKIN, 1914- . Alaskan ice-dammed lake: Lake George (abstract). (Association of American Geographers. Annals, June 1953. v. 43, no. 2, p. 192-93)

Contains a definition and brief description of ice-dammed lakes, marginal drainage forms of mountain glaciers in general, and stresses the need for an understanding of their draining processes "in relation to potential settlement, transportation, and water power." Drainage from Lake George, 60 miles east of Anchorage, takes place annually beginning the first week in August. Its level dropping by 120 ft. in ten days, the L-shaped lake, 14 by 4 miles, becomes three small lakes. The gorge through which the lake drains is closed by midwinter.

32281. STONEHOUSE, BERNARD. Fire precautions at antarctic stations. (Polar record, July 1953. v. 6, no. 46, p. 743-45)

Contains discussion of hut design and construction, fire-fighting equipment, and instructions necessary for safety of expedition personnel. **Copy seen:** DLC.

32282. STORER, JOHN B., and L. H. HEMPELMANN. Hypothermia and increased survival rate of infant mice irradiated with X-rays. (American journal of physiology. Nov. 1952. v. 171, no. 2, pp. 341-48, 8 tables) 17 refs.

Survival of infant mice irradiated while in deep hypothermia (5° C.) was almost twice that of non-chilled controls. Mortality rate was not affected in less severely chilled infant animals, nor in adult mice anesthetized prior to chilling. Protection afforded by deep hypothermia was about equal to that produced by a nitrogen atmosphere; the benefits derived from chilling was less when animals were placed in oxygen rather than in nitrogen, but combining anoxia with refrigeration did not enhance the radiation protection. It is concluded that lowered tissue oxygen played an important role in increasing the survival rate of the chilled baby mice.

32283. STOSS. Kälteschädigungen beim Pferde. (Deutsche tierärztliche Wochenschrift, Oct. 24, 1942. Jahrg. 50, Nr. 43-44, pp. 444-46) *Title tr.:* Cold injuries in the horse.

Contains a report on cases of frostbite in horses encountered on the Russian

front during the winter of 1941-42. Hairless areas were affected: lips, hoofs, genitalia. Short notes on therapy and prevention are included.

Copy seen: DSG.

32284. STOWELL, DAVID. A history of Alaskan weather observations. (In: Alaskan Science Conference . . . 1951. Proceedings, pub. 1953, pp. 295-98)

Earliest observations were kept by the Russians in the 18th and 19th centuries. Observations begun by Americans in 1874, lapsed between 1886 and 1890, after which regular records have been kept. Some observers and stations with long records are noted. Early forecasting services, airway reports, and observations made during the Second International Polar year are mentioned. Fairbanks, Juneau, and Anchorage are now forecast centers, and climatological data for about 130 stations are regularly published.

32288. STRIDSBERG, EINAR. Den norrländska skogsindustriens råvaruförutsättningar. (Ymer, 1950. Årg. 70, häfte 1, p. 1-23; häfte 2, p. 97-107, 12 fig., 2 fold. col. plates) **Title tr.:** The raw materials of the Norrland forest industry.

Contains a detailed analytical study of the forest situation particularly in Gävleborg, partly Västernorrland and Jämtland, partly Västerbotten and Norrbotten (62°-68°N. 12°-24° E). Comparison between the periods of 1923-29 and 1934-53 shows decline. Export figures are expected to drop to 75 percent of pre-war figures, hence means to reduce domestic consumption and to increase the timber production are discussed. It is said that 20-30 percent reduction of cutting timber will be necessary to maintain future timber production. Summary in English.

Contains a motion-picture cameraman's account of his participation in an expedition headed by L. A. Kulik in 1927 to the site of the so-called Tunguska meteorite. It fell in 1908, devastating a large area of uninhabited taiga, about 360 km. north of Keshma, and 12 km. from the confluence of the Chushma and Churgina Rivers (tributaries of Podkamennaya Tunguska). Locally-current Tungus accounts of a thundergod who came down from the heavens and dwelt at the spot (which the natives avoid), are said to have aided the party to locate the site. Description and illus. are given. The extensive destruction of forest and terrain, still evident after 20 years is described and illustrated: trees uprooted and scorched for more than 100 km., numerous craters 5-50 m. in diameter, etc. The three-man party with five native workers, all became affected by scurvy, and, except Kulik, returned. The author, on his way back, made a series of films in Keshma, from the life of the Tungus.

32302. SULLIVAN, BERNARD JEREMIAH, 1921- , and B. G. COVINO. Peripheral vascular responses to frostbite as influenced by alcohol. (American journal of physiology, Oct. 1953. v. 175, no. 1, p. 61-64) 20 refs.

Contains an account of experiments with golden hamsters, chilled or frost-bitten locally. Intraperitoneal administration of 25 percent alcohol alleviated vasoconstriction when given after the cold injury, but prevented it when given before it. The action was in both cases temporary, but lasted longer in pretreatment. The action of alcohol suggests that peripheral vasoconstriction is due to activation of vasomotor centers by injury substances originating at the site of frostbite. Blood sludge, observed under conditions of frostbite and alcohol treatment, is also discussed.

Copy seen: DSG.

32303. SULLIVAN, BERNARD JEREMIAH, 1921- , and W. K. MASTERSON. Peripheral vascular responses to remote thermal burns and frostbite as influenced by heparin and Paritol. (American journal of physiology, Oct. 1953. v. 175, no. 1, p. 56-60) 17 refs.

Contains an account of experiments with golden hamsters including such with their leg exposed to solid carbon dioxide or their pouches to Ringer solu-

tion of 4° C. The mechanism of remote vasoconstriction and vasodilatation, the formation of thrombocytoses and white thromboses were studied. Heparin and the relatively more powerful Paritol caused vasodilatation and an increase of the rate of flow, cleared up stasis, but favored thrombocytosis and white thrombosis in the venules.

"Concepts of eddy or turbulent motion and exchange of mass between sea or land surface and air are outlined and importance for solution of technical or geophysical problems stressed. Until a short time previous to this paper, not much had been done to harmonize theoretical work, laboratory experiments, and free air turbulence investigations. Prandtl's mixing length concept was applied to free air conditions by Rossby and Montgomery with some success. The author uses data from the Norwegian-Swedish Svalbard Expedition of 1934 [meteorological investigations on Isachsen's Plateau, Vestspitsbergen] to obtain values for turbulent exchange of mass over a snow field. The work is further refined in the laboratory and applied to computation of evaporation over the Atlantic Ocean. Equations and nomograms given." "A hydrogeological survey was made in the area of Yakutsk in order to locate an adequate source of water supply. The region has a rugged climate with average annual air temperatures about -10.7° C. and limited winter precipitation. The following three types of water sources were found: suprapermafrost water, talik water flowing below the Lena riverbed, and subpermafrost water. The suprapermafrost waters of the Yakutsk region are turbid, easily contaminated and usually unreliable as to the yield and sanitary conditions. Free talik water was found below the riverbed of the Lena and near the edge of the stream. Drillings revealed a water bearing horizon, 10 m. thick and 700 m. wide, which could be effectively utilized. The water was highly mineralized, but was considered suitable for use after purification."—SIPRE. Summary in English.

Contains a study of certain physiological changes in numerous dogs (and three humans) undergoing general hypothermia, with and without circulatory arrest. Data on pH; serum sodium, chloride, potassium and phosphorus; plasma protein; on hematocrit levels; total body water; extracellular fluid space; blood volume and in some cases on urinary output, are presented. Hypothermic dogs undergoing circulatory arrest by occlusion were routinely subjected to auricular cardiotomy. The problem of ventricular fibrillation and its causes are analyzed in detail. **Copy seen:** DSG.

Contains an account of cardiac operations made on 15 patients submitted to hypothermia, with body temperatures lowered to 21.5° to 26° C. In 13 of them, circulation was stopped from two to eight and one-half minutes, and the

operation was performed in the open heart under direct vision, with one operative death in the group. The report includes information on surgical procedure; methods of chilling and rewarming (in water bath); prevention of shivering, hyperventilation, air embolism, case histories, etc. **Copy seen:** DSG.

32340. SWANSON, ANTON. They kill for joy. (Forest and outdoors, Nov. 1953. v. 49, no. 11, p. 6-7, 18, illus.)

Depredation by wolves, especially in Northern Ontario is described. They often kill without consuming the prey, or kill pregnant animals and eat only the unborn young. Hunting habits of the wolf; animals preyed upon, etc., are noted. **Copy seen:** DA.

32341. SWANTON, JOHN REED, 1873- Contributions of the ethnology of Haida. (American Museum of Natural History, N. Y., Memoirs, 1905. v. 8, pt. 1, p. 1-300, 31 text illus., 26 plates, 4 fold. maps). Reprint from Jesup North Pacific Expedition. Publications v. 5, pt. 1.

Contains a monograph on the Haida Indians of Queen Charlotte Islands, British Columbia, whom the author studied Sept. 1900-Aug. 1901 in the interest of the Jesup North Pacific Expedition. His primary task was investigation of their religious ideas, social organization, and language; material was secured at Skidegate and Masset with help of interpreters. This monograph deals with: cosmic notions, shamanism and witchcraft, medicine, customs and taboos, games, social organization, history, such family prerogatives as crests, names, songs, representation of crests and myths in art (with photographs and drawings by Rudolf Weber), the secret society and potlatches, the families (clans) of the Haida. English abstracts are given of 198 Haida stories from Skidegate, Masset, and Kaigani. Families and clans listed include those who later migrated from northwestern Graham Island (of the Queen Charlottes) across Dixon Entrance to Kaigani in Southeast Alaska (p. 271-72).

Contains a collection of stories in the Skidegate dialect with English translation (p. 7-150), and myths in English with numerous explanatory notes and interpretations (p. 150-448). A few texts in the Masset dialect, used also by Haida Indians in Southeast Alaska are included. The texts were obtained on the Queen Charlotte Islands during the winter of 1900-1901. The interpreter was a Haida native of a leading family.

32346. SWEATMAN, GORDON R. Distribution and incidence of *Echinococcus granulosus* in man and other animals with special reference to Canada (Canadian journal of public health, Nov. 1952. v. 43, no. 11, p. 480-86, 2 text maps, table) 59 refs.

Contains account of the incidence and distribution of *Echinococcus granulosus*, based on published records and personal communications to the author. It is concluded that the parasite has a widespread distribution in areas inhabited by moose and wolf, these animals being the important reservoir hosts in North America. Human cases have occurred close to wolf and moose populations, and are probably acquired through handling infected wolf carcasses or through contact with dogs that had eaten infected carcasses of moose or other wild herbivores. The parasite is relatively rare in cattle, horses and swine. The account covers the arctic areas, including Alaska. **Copy seen:** DSG.

The population of Siberia is divided into four groups: Slavs, Turks, Mongols, and Finns. The main subdivisions of the last three are listed. Brief descriptions are given of four of "Siberia's foremost original inhabitants": the Khirgiz people, the Yakuts of northern west Siberia, the Buryats, and the Tungus of the central Siberian plateau.

Copy seen: DLC.

32354. SYNNERBERG, GEORG. Sibirien, dess land och folk, III. (Terra, 1899. v. 11, no. 5, p. 281-89) **Title tr.:** Siberia, its land and population, part III.

Short descriptions of the Tobolsk and Tomsk governments (provinces) of west Siberia, and the Yeniseysk and Irkutsk governments and the Yakutsk district of east Siberia. The Tobolsk and Yeniseysk governments as well as the Yakutsk district extend to the Arctic Ocean. The mineral wealth of the Yakutsk district (gold, silver, iron, malachite, etc.) is stressed.

Part IV (in Terra 1889, v. 11, no. 6, p. 321-33) deals with the eastern Siberia

but not with its northern parts or Kamchatka.

32355. SYTOVA, V. A. Koralý semeľstva Kyphophyllidae iz verkhnego silura Urala. (Akademíia nauk SSSR. Paleontologicheskii institut. Trudy, 1952. t. 40, p. 127-58, illus. 1-20, plates 1-6) **Title tr.:** Corals of the family Kyphophyllidae from the Upper Silurian of the Ural.

Contains a brief review of the literature on Silurian corals, morphology of the fam. Kyphophyllidae, a systematic list of six species, synonyms, descriptions, diagnoses of one new genus and two new species, dimensions and data on variation and ontogeny, notes on phylogeny of the family, stratigraphy and geographic distribution. Includes *Entelophyllum uralicum* and *Kyphophyllum elkinense* n. sp. found on the eastern slope of the Northern Ural.

Copy seen: DLC; MH-Z.

32356. TĀNING, Å. VEDEL, 1890- Influence of the environment on number of vertebrae in teleostean fishes. (Nature, Jan. 7, 1950. v. 165, no. 4184, p. 28, illus.) ref.

Contains an account of experiments with eggs of sea-trout exposed during the sensitive period to low (or high) environmental temperature. Fish developing from the cold-treated eggs showed a higher number of vertebrae (and of other meristic characters) than untreated controls. Similar conditions were found in the northern areas of distribution of this species.

32357. TABER, STEPHEN, 1882- Origin of Alaska silts. (American journal of science, May 1953. v. 251, no. 5, p. 321-36, text map) 13 refs.

In opposition to the theory that most Alaskan silts are wind-borne and of glacial origin, the author states that "wind-borne glacial silts are important in a few limited areas, but silts formed by frost disintegration of fine-grained cleavable rocks are widely distributed. In the Fairbanks District, which is typical of a large area, silt deposits are thick though glacial streams are absent, winds extremely light and dust storms unknown. The dense vegetal blanket, almost universally present, is a major factor in restricting wind transportation." The meteorology, topography, petrology and

vegetative cover of this region are discussed as evidence of local origin of the silts. Silts accumulated when the climate was warmer than at present; and the ground was not perennially frozen until probably the first glacial age. The main steps in the process of silt formation are outlined and related to climatic changes. Other sections of Alaska are briefly discussed with the same conclusions as to silt origin. (See also *Arctic Bibliography*, No. 20709).

32363. TALBOTT, JOHN H. Cold exposure; pathologic effects. (In: Glasser, Otto, ed. Medical physics, Chicago, 1944. p. 244-46) 8 refs.

Contains information on clinical syndromes of frostbite and hypothermia (general reduction of body temperature); critical level of hypothermia; pathology of hypothermia (heart, nervous system, blood; physiology and biochemistry, etc.) first aid in hypothermia; frostbite and first aid in it. *Copy seen*: DLC.

32364. TALBOTT, JOHN H. Medical progress: the physiologic and therapeutic effects of hypothermia. (New England journal of medicine, Feb. 13, 1941. v. 224, p. 281-88) 45 refs.

Contains a review and discussion of induced hypothermia (general and local), with sections on early observations and experiments with tissue cultures and laboratory animals; induction and maintenance of general hypothermia in man for therapeutic purposes; complications and mortality; physiologic and biochemical phenomena observed during hypothermia; therapeutic effects of hypothermia in cancer, leukemia, morphine addiction, schizophrenia, etc. *Copy seen*: DLC.

32365. TALITSKIĬ, M. V. K étnogenezu komi. (Akademiia nauk SSSR. Institut istorii material'noi kul'tury. Kratkie soobshcheniia, 1941. vyp. 9, p. 47-54, 2 fig.) *Title tr.*: The ethnic origin of the Komi (Zyryans).

Contains an attempt, on the basis of newly discovered archeological material and old chronicles, to solve the problem of what ethnic groups lived on the upper Kama, the Vyehgda River and behind the Ural Mts. in the 10-16th centuries. The large settlements unearthed on the River Kama show the chief occupation of the people to have been agriculture. Up to 1000 A. D. the inhabitants of the Kama region belonged to the so-called Anan'in culture. After that date a new population, bringing a more advanced culture, moved in. They are called in historical sources the Visu, and they evidently traded with the Bulgars. Archeological excavations have brought to light whole treasuries of ornaments and dishes of silver and bronze. The Komi people apparently is composed of two groups: that of the Kama, and that of the Vyehgda, or the Great Perm, according to the chronicles. *Copy seen*: DLC.

32366. TALLGREN, A. M. Die "altpermische" Pelzwarenperiode an der Pechora. (Suomen muinaismuistoyhdistys. Aikakauskirja, 1934. v. 40, p. 152-81, 37 illus. incl. text map) **Title tr.:** The period of "old Permian" fur trade on the Pechora River.

Contains description and comparative investigation of treasure found on the middle Pechora in 1873 and donated to the Museum at Reval (Tallinn) Estonia. The find consists of 18 bronze plaques and ten arrow points, five of stone and five iron. The artifacts are compared with several similar finds (complete "treasures"), discovered in a region between 62°-65° N. 50°-60° E., on the Rivers Pechora, Vym, and especially those of the Kama region (as indicated on map, p. 160). The plaques bear figures of mammals, birds and fish, horned or hooded human faces, and fantastic creatures part animal part human, representing the forest spirit (*sulde*). They were pendants obviously used with the shaman's costume. They were probably produced by Zyryans of the Kama River region in the "golden age" of the Permian animal style (500-700 A. D.) as trade objects for furs of the North or the Pechora region. The Zyryans developed this style of ornament by incorporating local features and fancies with imported oriental motifs. The nature, population and trade of the Pechora basin and Bol'shezemel'skaya Tundra is outlined in the introduction. **Copy seen:** DLC.

32367. TALLGREN, BRUNO. Lapparnes gudatro i äldre tider. (Terra, 1908. v. 20, p. 175-90, illus.) **Title tr.:** The religion of the Lapps in olden times.

The old religion of the Lapps was fatalistic and remained undeveloped. Nature worship was common and the chief gods represented the sun, the air, water, and the like. The bear was looked upon as a god-like animal, but it was hunted, killed, and eaten nevertheless. The common god of all the Lapps was Jubmel or Jumy, their divine ancestor, who had an earthly representative, Junkker or Storra Junkker, protector of cattle-raising and hunting. "Troll drums" were beaten with hammers to ascertain the will of the gods. Sacrifices were made to the chief gods in the fall, usually of horns and bones, rarely of live animals. A rite similar to baptism was current among the Lapps long before the arrival of Christianity. It is pointed out that the religion of the Lapps adopted many

features from the cults of neighboring peoples. **Copy seen:** DLC.

32368. TALSO, PETER J., and others. Effects of the cold pressor test on glomerular filtration and effective renal plasma flow. (Journal of laboratory and clinical medicine, Apr. 1948. v. 33, p. 430-34, diagr., table) 13 refs. **Other authors:** A. P. Crosley, Jr., and R. W. Clarke.

Contains a report of experiments on seven volunteers with no history of renal disease. In six out of seven, glomerular filtration rate and effective renal plasma flow decreased either during, or within about 30 minutes after, the application of the cold stimulus.

32370. TAMBOVŤSEV, B. M. Promysel i sostojanie zapasov sel'di v Belom more; iz rabot Belomorskoj rybokhozjajstvennoj stantsii PINRO. (Rybnoe khozjajstvo, June 1947. t. 23, no. 6, p. 30-33) **Title tr.:** The herring fisheries and state of the herring stock in the White Sea; from the work of the White Sea Scientific Fisheries Station of PINRO [Polar Institute of Fisheries and Oceanography].

Contains description of methods of catching herring in various parts of the White Sea, and discussion of causes of a considerable fall in the catch. In Kandalaksha Bay, for example, the spring catch dropped from 1,200 tons (24,000 centners) in 1927 to 7.5-15 tons in 1940-44. This decline is attributed to a decrease in the stock caused by a warming of the climate unfavorable to propagation of the White Sea species of herring.

rastitel'nosti Rossii. (In his: Geografi-
cheskie raboty, 1953, p. 509-648, fold.
map) 110 refs. **Title tr.:** Principal
characteristics of the vegetation of the
U.S.S.R.

Includes (p. 511-15) historical notes on
the study of the phytogeography of Russia
and on the most important botanical
travels. A chapter on tundras (p. 518-
26) has a list of literature (40 items), gen-
eral description, subdivisions of the tun-
dra, their characteristics, and references
to many plants. Chap. 2 (p. 526-52) on
forests of northern Russia and Siberia,
contains a bibliography (ca. 70 items),
characteristics of the taiga and forests of
various regions of European Russia and
Siberia, subdivisions of this zone by
various geobotanists and lists of typical
trees and shrubs. The scheme of geo-
botanical regions includes the northern
or taiga region subdivided into tundra
and taiga (and swamp) zone. The nat-
ural regions are plotted on the map
(scale, 1:25,200,000). This paper was
originally published as a supplement to
the Russian translation of E. Warming,
*Lehrbuch der oekologischen Pflanzengeo-
graphie*, 1902.

32376. TANNER, VÄINÖ, 1881-1948.
Folk och kulturer på Labrador. Ett
bidrag till belysande av konvergens-
företeelserna; föredrag vid Finska veten-
skaps-societetens sammanträde den 16
januari 1939. Helsingfors, 1939. 54 p.,
36 illus. (incl. 4 maps). (Finska veten-
skaps-societeten, Årsbok-Vuosikirja 17
B, no. 2) **Title tr.:** Peoples and cultures
in Labrador. A contribution to the
theory of convergence. Lecture delivered
at the January 16, 1939 meeting of the
Finnish Scientific Society.

The population of Labrador consists

of white people (floaters and planters or shore people called "livyers"), Eskimos, and Indians (the Montagnais in the south and the Naskapis in the north). The cultures of the Eskimos and Indians are used to illustrate the convergence process, according to which similar cultural forms are developed by primitive peoples in similar natural surroundings. It is pointed out that at one time in the past the primitive cultures of northern Finland and Labrador were essentially alike. Photographs of individuals, groups, habitations, etc., illustrate author's argument.

32379. TANNER, VÄINÖ, 1881-1948. Note sur la position chronologique des trouvailles préhistoriques par rapport aux étages géologiques dans la région côtière de la Fénno-Scandie aux confins de l'océan Arctique. Helsinki, 1931. 24 p. 11 illus. (Suomen muinaismuistoyhdistys. Aikakauskirja, v. 39, pt. 1) 42 refs. **Title tr.:** Note on the chronological position of the prehistoric finds in relation to the geological stages in the littoral region of Fennoscandia on the border of the Arctic Ocean.

Contains an attempt to date from the geological viewpoint the paleolithic sites (Komsa culture), discovered by A. Nummedal in 1926 at Alten, Norway, and later near Petsamo (*Arctic Bibliography*, No. 12612). An epeirogenic diagram (fig. 9) graphically shows shoreline changes by which the finds are dated. Human habitation of the Scandinavian arctic coast was impossible earlier than the period following the *Portlandia* transgression about 9500 years ago. The second geological transgression of Scandinavian North, which is contemporaneous with the Arctic Neolithic, occurred about 4200 years ago (fig. 9). The author believes the bearers of Komsa culture to have been ancestors of the Lapps.

32380. TANNER, VÄINÖ, 1881-1948. Om de blockrika strandgördlarna vid subarktiska oceankuster. (Terra, 1939. v. 51, p. 157-65, illus.) 4 refs. **Title tr.:** The boulder barricades along the sub-arctic ocean shores.

"Boulder barricades occur along ocean shores having a winter ice sheet and a tide amplitude of about two-four m. The tide forms a land of ice blocks between the ice sheet of the fjord and the ice foot. Pressure develops in the shore zone due to wind action on the ice sheet. A mixture of ice blocks and stones, gravel and clay from the sublittoral belt is piled against the ice foot. Boulders with attached clay arise after the ice melts at places not reached by high tide indicating that boulder barricades are not formed by tide action alone."—SIPRE. Summary in English.

32381. TANNER, VÄINÖ, 1881-1948. Det senglaciäla havets utbredning i Lutto och Suomu älvars dalgångar ovanför sammanflödet samt några ord om morfologien inom denna trakt. (Finland. Geologiska kommission. Bulletin, 1936. no. 115, p. 107-119, diagr.) **Title**

tr.: The extension of the late glacial sea into the Lutto and Suomo River valleys upstream from their confluence, and some remarks about the morphology of the district.

The author discusses the geomorphology of the Lutto-Suomu district, one of the three valley districts between Patsjoki and Vuorijärvi on the eastern boundary of Finland where it is possible to study the transgression conditions of the postglacial period. The geological development of the district is outlined, including the formation of the plateau ridges and the deposits of fine sand in the lower parts of the valleys. A number of the measurements of elevations above sea level made by the author is given in order to facilitate future research.

32382. TANNER, VÄINÖ, 1881-1948. Studier över kvartärsystemet i Fennoskandias nordliga delar, IV. Om nivåförändringarna och grunddragen av den geografiska utvecklingen efter istiden i ishavs-Finland samt om homotaxin av Fennoskandias Kvartära marina avlagringar. Helsingfors, 1930. 600 p., 84 illus., 5 fold. maps and tables. (Finland. Geologisk kommission. Bulletin, 88) Also pub. as Fennia, 53:1. About 1050 refs. *Title tr.*: Studies of the Quaternary system in the northern parts of Fennoscandia, IV. The changes of level and the basic features of the postglacial geographic development of Finland near the arctic sea as well as the homotaxis of the Quaternary marine deposits in Fennoscandia.

Tanner confirms the fixed relation between the *Tapes shoreline* and that ordinarily called *ligne senglaciale* reported by Fridtjof Nansen in his *The strandflat and isostasy* (*Arctic Bibliography*, No. 12020), and explains the anomalies existing between direct measurements and the results calculated from the empirical equation given by Nansen. Nansen's results remain "en vigueur" notwithstanding that his premises ought to be essentially modified.

Tanner discusses the coordinating principle (p. 3-11); the genesis of some principal types of littoral formations and their reciprocal relations (p. 11-33); the method of measuring (p. 33-40); the authors who have described the changes of level of the Fennoscandian coast of the arctic sea (p. 41-45); the new observations on the elevated shorelines (p.

46-165); and the Quaternary fossil-bearing beds of the area (p. 165-97). Under Conclusions, he considers combinations of the old littoral formations with surfaces of synchronous shorelines (p. 198-258); the homotaxy of the marine formations of Fennoscandia by means of the old shorelines (p. 258-439); and the principal phases of the geographic evolution of the arctic coast of Finland since the beginning of the latest glaciation. Summary in French, p. 485-537. Parts I-III of these studies are listed as *Arctic Bibliography*, No. 26615-26617.

32389. TAYLOR, ANDREW. Snow compaction. Wilmette, Ill., 1953. xxiv, 64 p. illus. diagrs. tables, graphs. (U. S. Army. Corps of Engineers. Snow, Ice, and Permafrost Research Establishment. Report no. 13, Jan. 1953) 47 refs.

"The current concept of snow formation is presented by Ukichiro Nakaya to provide better understanding of snow dynamics involved in snow compaction. Conditions necessary for the formation and precipitation of snow are presented. The metamorphism of snow including firnification and hardening are discussed. Snow is considered as an engineering material with changeable mechanical properties easily modified by natural and artificial processes. Snow compaction techniques used in maintenance of roads and airport runways consist of cementing the first three or four in. of snow to the ground by rolling, thus forming a firm foundation for future surfaces. The equipment used in compressive snow-compaction is described and the processes involved are studied. Compaction of deep snow beds by depth processing through scarification is discussed. Methods of snow road [and ice road] construction developed by the logging industry are appended."—SIPRE.

Contains description of apparatus and methods for production of controlled myocardial injury by low temperature. Any of the four cardiac chambers and the interventricular septum can be affected up to complete necrosis of muscle cells. The value for the experimental study of cardiac insufficiencies is discussed.

Copy seen: DSG.

32391. TAYLOR, CHARLES BRUCE, 1915- , and others. Localized arteriosclerotic lesions induced in aorta of juvenile rabbit by freezing. (Archives of pathology, June 1950. v. 49, no. 6, p. 623-40, illus., tables) 9 refs. *Other authors:* D. Baldwin, and G. M. Hass.

Contains a microscopic study of de-

generative, but especially regenerative processes in the abdominal aorta, frozen by contact with a cold needle. Injurious effects were slight, and only smooth muscle cells of the media disintegrated, with calcium deposits appearing in place of their remnants. Cell proliferation occurred mainly in the intima. In time a new aortic wall regenerated in the proliferating intima, and offered an almost perfect substitute for the hardened, partly calcified degenerate segment.

Contains an account of the work on the Greenland icecap of a three-man party led by the writer during June-Aug. 1950, and that of its wintering member until Apr. 30, 1951. The two-part scientific program included measurements of atmospheric electricity and of temperature gradients in the lower levels of the atmosphere (continuing studies made during summer 1949 and winter 1949-50), and were carried out partly at the Central Station of the main expedition and partly during the return to the station on the west coast. Techniques and apparatus are discussed in some detail. The behavior of the apparatus and its endurance under arctic conditions is criticized and suggestions given for improvement. A summary, supplemented by tables and a graph, is presented of work done and results obtained in both parts of the program, and a brief statement of plans for analysis and use of results is given. *Copy seen:* CaMAI.

32393. TAYLOR, IKE PENDLETON, 1890- . Road maintenance in Alaska. (Pacific builder and engineer, Aug. 1939. v. 45, no. 31, p. 36, illus.)

"Roads near larger towns in Alaska are kept open for winter travel by standard equipment such as blades on tractors or rotary blowers. Small continuous water flows or seepages often cause high ice accumulation on roads which, in some instances, may be prevented by blind drains. Frozen culverts are opened before the spring melt by running a pipe, connected with a boiler, through the culvert. A drainage for melting ice covering the floor of a bridge is provided by trenching the ice over the center of the bridge to the bridge deck, removing some planks, and opening a channel in the ice below the bridge. Streams passing under roads in mountainous regions are controlled by laying small poles along the bank at right angles to the direction of the stream and on a 25°-35° slope, which are weighted with rolls of stone enclosed in galvanized wire mesh. The poles and rock rolls slide down if cutting occurs, stopping erosion at the bottom of the slope."—SIPRE.

TAYLOR, RAYMOND FRANK, 1897- . Alaska forest research problems and program. *See* Alaskan Science Conference, Nov. 1950. Proceedings, 1951. No. 20117.

32394. TAYLOR, RAYMOND FRANK, 1897- . Forest research possibilities in Alaska's Interior. (*In:* Alaskan Science Conference . . . 1951. Proceedings, pub. 1953, p. 61-65) 6 refs.

Of an estimated 121 million acres in actual tree growth in interior Alaska, some 24-25 million acres are heavily forested. The work of Dr. H. J. Lutz of the Yale Forest School is discussed as evidence of potential resources. Climax and subclimax species are noted and a comparison made between these interior Alaskan forests (and the quantity of lumber produced) and those in other northern regions. Future research problems include the effects of forest fires on soils, plant and tree succession following fires, and studies of seeds, tree growth and measurement predictions, tree culture and harvesting.

32400. TELENGA, N. A. Nasekomye pereponchatokrylye, t. 5, vyp. 2-3. Sem. Braconidae, ch. 1-2. Moskva-Leningrad, Izd-vo Akad. nauk SSSR, 1936-41. pt. 1: xvi, 403 p. illus. (50 fig.); pt. 2: xvii, 466 p. illus. (129 fig.).

(In: Fauna SSSR. Insecta Hymenoptera, t. 5, vyp. 2-3. (Nov. ser. no. 4, 24)). Vyp. 2 (n. s. 4) is misnumbered: 1. 58 refs. **Title tr.:** Hymenopterous insects. Fam. Braconidae, pt. 1-2.

Contains (in pt. 1) a systematic index of the species of the fam. Braconidae, subfam. Braconinae, tribe Braconini, (p. vii-xvi); followed by an introductory part (p. 1-20) giving a brief morphological sketch, data on the mode of life, and on the importance of braconids for the control of injurious insects; notes on gathering and culture of braconids; bibliography. In the special part (p. 21-305) are keys to the subfamilies, genera and species; a systematic list of 427 species including diagnoses of 83 new ones, with descriptions and data on distribution; a list of 40 insufficiently known forms (p. 302-305).

Pt. 2 presents a systematic index to seven tribes of the subfam. Braconinae and to the subfam. Sigalphinae (p. vii-xvii), followed (p. 1-370) by a systematic enumeration of 427 species, including 59 new to science, with keys to the subfamilies, genera and species, descriptions, literature references and data on distribution and biology (hosts). Many species native to northern European U.S.S.R. and Siberia are included in both parts. Summaries in English, pt. 1, p. 306-402; pt. 2, p. 371-465.

32403. TEOLOGOV, A. V. Topografo-geodezicheskie raboty 2-I Chukotskol'ekspeditsii Glavsevmorputi. (Geodezist, 1937, god 13, no. 6, p. 58-62, illus.)

Title tr.: Topographic and geodetic work of the second Chukotka expedition of the Northern Sea Route Administration.

Contains a description of geodetic work carried out in 1935-36 under arctic conditions. The region surveyed (some 10,500 sq. km.) lay north of Zaliv Kresta (66° N. 179°15' W.) and included the Kresta Bay region, and Omguma and Yakatika River basins. A map of the region (scale 1:100,000, contour interval 50 m.) and another map (1:200,000) resulted from the work. Six astronomical points were determined: (1) in the middle part of Omguma (Amguyema) River, (2) near Mt. Ukooch-Khoiygen, the rest on the shore of Kresta Bay.

Copy seen: DLC.

32404. TEPLOUKHOV, A. F. O drevnem shamanskom izobrazhenii iz bronzy, bytovavshem na Konde sredi vogul i ostiakov. (Sovetskaiâ arkheologiâ, 1947. t. 9, p. 239-50, 3 illus.) 16 refs. **Title tr.:** On an ancient shamanistic representation in bronze, among the Voguls and Ostyaks on the Konda River.

Contains the history of a famous "idol" called "satan of Nakhhrach" (fig. 1). Often mentioned in literature, it was finally purchased in 1933, from a descendant of the famous Vogulian family of shamans, Pakin. It is a bronze plaque, typical of the sub-Uralian region of the 7-10th centuries. Some other artifacts, representing human faces or animal figures, are also described. These

objects were venerated by the Voguls and Ostyaks as representations of their national heroes, and kept hidden from missionaries who wanted to destroy "the idols." Russian prose translation of a Vogulian epic song of two heroic brothers is appended (p. 245-48); it had been noted down by B. Munkácsi on the lower Konda in 1888. Summary in French, p. 149-50.

Copy seen: DLC.

32405. TEPLOUKHOV, A. F. Perm' Velikaia po istoricheskim dannym i v fantazii I. Mösshaga. (Komi mu, 1927. god 4, no. 6-7, p. 71-83) **Title tr.:** The Great Perm' in the historical sources and in the fancy of I. Mösshag.

Contains dispute of the past of the Zyryan people as presented by Mösshag q. v. The latter, author states, wrongly interpreted chronicles and drew false conclusions on the former high culture of the Permians or Zyryans, who were not the old inhabitants of the North, but came thither from the southern regions.

Copy seen: DLC.

32406. TEPLOUKHOV, A. F. Perm-fäki i zyrfäne. (Permskil kraevedcheskil sbornik, 1926. vyp. 2, p. 113-24) about 180 refs. **Title tr.:** The Permians and Zyryans.

Contains discussion on the history and meaning of these terms. "Perm-fäki" is not ethnographical but geographic in derivation, and was first used in 1467 to designate the inhabitants of the Great Perm' who were defeated by the Muscovite army in 1472. The term "Zyrfäne" is an ethnographical one, first mentioned in 1581. The term "Komi" by which Permians and their more northerly kin, the Zyryans, called each other, was first mentioned in 1695. The historical sources on these people, their territory, language and anthropology are reviewed. **Copy seen:** DLC.

32407. TEPLOUKHOV, ALEKSANDR EFIMOVICH, 1811-1885. Ueber die prähistorischen Opferstätten am Uralgebirge. (Archiv für Anthropologie, 1879. Bd. 12, p. 201-231, plates V-VI) **Title tr.:** On the prehistoric sacrificial places in the Ural Mts.

Contains description of a sacrificial mound at Garevaya (55 verst north of Perm'), discovered and explored by the author in 1874. Piles of bones were unearthed, skulls and leg bones of wild and domestic animals, some burned and

crushed or marked by sharp cutting tools, together with numerous artifacts; bone arrow heads (170 pieces), glass and gold-plated beads (150 pieces), small drinking cups of clay, larger pots, and a few objects of stone, bronze and iron. Detailed descriptions are given of these objects, of which 61 are illustrated at end of the volume. The region is now inhabited by Zyryans; the author, however, believes the sacrificial mound to have belonged to the Chuds, an extinct Finnish people. For comparison he refers to the more recent sacrificial practices of Ostyaks and Voguls as described by J. G. Georgi (q. v.) in 1773-74, N. A. Abramov in 1857 (*Arctic Bibliography*, No. 26), and Pozdniakov the missionary in 1877, and points out their striking resemblance to the find at Garevaya (p. 222-26). The trapping of wild reindeer in pitfalls as practiced by Ostyaks, Voguls, and Samoyeds is also described (p. 226-27).

Seria fakul'teta narodov Severa, vyp. 2, Iazyki i istoriia narodnostei Kraĭnego Severa SSSR, p. 60-83) **Title tr.:** Russian influence upon the Samoyed language; based on lexical material.

Contains a sketch of the Samoyed mode of life as that of a reindeer-herding nomad people, and as it appeared in their folklore. Russian loan words in the Samoyedic language are investigated according to linguistic principles proclaimed by I. V. Stalin. The author finds two categories of cultural loan words in Samoyed: to the first and older category belong words typical of the period of "colonial oppression." To the second group belong the Russian words adopted in the Soviet period, numerous because of the radical changes in social and economic structure. As the Russian "cultural words" were adopted, the Samoyedic language was enriched. The Russian words, however, often acquired a Samoyedic style of pronunciation and form changes according to rules of Samoyedic grammar. **Copy seen:** DLC.

Contains a systematic index of beetles of the fam. Attelabidae; followed (p. 11-45) by an introduction giving a morphological sketch of the family, its systematic position, a general survey of its biology, general distribution and history of its spreading; its distribution and ecology in the U.S.S.R.; economic importance (injurious to fruit and timber trees, cultivated shrubs and some herbaceous plants); data on the biology of pests and their control, and a bibliography. In the special part (p. 46-223) are keys to the subfamilies, genera and species; descriptions of 159 species inhabiting the U.S.S.R. and adjoining countries, with synonyms, literature references and data on distribution and ecology. Indexes of the insect and host plants are appended (p. 224-31). A few species native to the northern regions of the U.S.S.R. are included in this study. Copy seen: DLC; MH-Z.

32419. TERZAGHI, KARL CHARLES, 1883- Permafrost. (Boston Society of Civil Engineers. Journal, Jan. 1952. v. 39, no. 1, p. 1-50, illus., graphs, map, diagr.) 11 refs.

"Basic information on the effects of engineering operations on permafrost is given. The permafrost layer extends from the coast of the Arctic Ocean to a line coinciding roughly with the 0° C. mean annual temperature isotherm. The heat conductivity of frozen and unfrozen ground depends on porosity, water content and the mineral composition of the grains. The upper boundary of the permafrost layer can be determined by rail penetration tests, by sampling operations, and by geophysical methods which are in the experimental stage. These methods are unsatisfactory when the permafrost layer contains layers or lenses of porous, spongy material. The upper limiting value for the settlement of the surface due to the thawing of frozen coarse grained sediments with a porosity n , is $0.1 n$ per unit of depth of thawing."—SIPRE.

32420. TESKA, C. Der Fliegenpilz bei den Nordasiaten. (Erdball, 1928. Jahrg. 2, no. 2, p. 48-50) **Title tr.:** The fly agaric among the North Asiatic peoples.

Contains account of a kind of narcotic widely used by the Paleo-Siberians; it is eaten raw either fresh or dried, or it is cooked and the broth drunk. The practice, first mentioned by Steller in 1774, was confirmed by Bogoraz and Jochelson. To get into "high spirits," a northern Asiatic takes eight to ten

pieces of this mushroom, fly agaric, which would be fatal to a European. It contains the poison muscarine which, taken in small doses, gives an illusion of warmth: the intoxicated person begins to dance and sing, later has visions, delirium and convulsions, and finally falls asleep for 12 to 16 hours. Shamans, especially, use this mushroom at their performances, and apparently without much harm to their health. The Tungus, according to Pallas, used an intoxicating drink from the plant *Hyoscyamus physaloides*.

Copy seen: DSG.

32421. TESKA, C. Die Kleidung der Kamtschadalen. (Erdball, 1929. Jahrg. 3, no. 11, p. 418, 2 illus. on plate 86) **Title tr.:** The clothing of the Kamtschadals.

Contains a short description of men and women's clothing, its material, form, ornaments. The men's garments are similar to those of the Eskimos, and the women's dress shows Russian influence.

Copy seen: DSG.

32422. THACKER, E. A. A comparative study of normal and abnormal blood pressures among university students, including the cold-pressor test. (American heart journal, July 1940. v. 20, no. 1, p. 89-97, 2 graphs, 6 tables) 8 refs.

Contains a study of blood pressure reactions to a standard cold stimulus in students with high, normal and low blood pressure, supplemented with careful histories, physical examinations and reexaminations. In addition to an analysis of blood pressure, the study yielded information on its heredity, the connection between blood pressure and emotional status, eating habits, consumption of coffee and tobacco, etc.

32423. THALBITZER, WILLIAM CARL, 1873-, and others. Eskimo-Aleut phonetic notation. (International journal of American linguistics, Apr. 1952. v. 18, no. 2, p. 112-13) *Other authors:* L. L. Hammerich, E. Holtved, and K. Bergsland.

To promote uniformity of phonemic notation, a tabulated set of letters and explanations is offered. It represents the authors' agreement at a meeting in Copenhagen, Oct. 3, 1951, upon a new system for transcription of Eskimo texts.

Copy seen: DLC.

32424. THALBITZER, WILLIAM CARL, 1873-. Der ethnographische Zusammenhang der Eskimo Grönlands mit denen der Hudsonbai. (Baessler-Archiv. 1911. Bd. 2, Heft 1, p. 32-44, 3 illus.)

Title tr.: The ethnographical relation between the Greenland Eskimos and those of the Hudson Bay.

Contains consideration of Boas' theory on the origin of the Eskimo culture in the central Canadian Arctic or on the western shores of Hudson Bay, and its later dissemination to Greenland and Alaska. The author thinks that support for this theory may be found in an ethnographical collection of about 300 specimens from the regions of Scoresby Sund and Franz Joseph Fjord, central and northern parts of East Greenland. They were brought home by G. Amdrup in 1900 from the so-called ship expedition, a part of that sponsored by the Carlsberg Fund 1898-1900. After detailed investigation of the Amdrup collection (see *Arctic Bibliography*, No. 17554), Thalbitzer finds these objects from Greenland to be to a great degree similar to those found in the northwest Hudson Bay region. It is obvious, he concludes, that tools and implements from this region and from the peninsula occupied by Central Eskimos around Boothia Bay, found their way steadily in earlier times to the northern shores of Greenland. The material culture of the arctic Greenlanders in northern parts of the west and east coasts of the island, is very close. Therefore, a conclusion may be drawn that the Polar Eskimos of North Greenland came from the Northwest Territories of Canada and are closely related to the Netsilik, Iglulik, Aivilik, and the Eskimos of Southampton Island. The question of the origin of Eskimo culture in southern Greenland is left open.

Copy seen: DLC.

32425. THALBITZER, WILLIAM CARL, 1873-. Is Eskimo a primitive language? (International Congress of Linguists. 4th, Copenhagen, 1936. Actes, 1938. p. 254-62) 65 refs.

Contains a general characterization of the Eskimo language, as a highly derivational and constructive one of the polysynthetic type, and far from primitive. It is rich in descriptive and expressive words. Independent initial bases (stems) of the Greenlandic language, for example, number about a thousand or more, as opposed to some seven hundred subordinate suffixes and formatives. Eskimo

forms a linguistic family in itself; but some probable loan-words from distant languages (especially those of Siberia) occur in it. **Copy seen:** DLC.

32426. THALBITZER, WILLIAM CARL, 1873- . Les magiciens Esquimaux, leurs conceptions du monde, de l'âme et de la vie. (Société des Américanistes de Paris. Journal, 1930. nouv. sér., t. 22, fasc. 1, p. 73-106, 9 text illus. and 31 illus. on 15 plates) 60 refs. **Title tr.:** The Eskimo magicians, their conceptions of the world, the soul, and of life.

Contains an analysis of beliefs and magic practices of Eskimo shamans (*angakkut*) in East Greenland, chiefly based on material collected by the author on his one-year stay at Angmagssalik in 1905-1906. The personality of a shaman, his social status, vocation and training, the use of sacred or secret language, the shamanistic incantations and equipment (drum, etc.), are described, as are the shaman's conversations with spirits and his supposed flying to the moon and diving to the sea bottom. Beliefs and myths on how the universe is constructed, the nature of the earth, heavens and moon, the functions of the animal soul (*inua*) and that of the several souls of man (*tarningit*) are characterized. The cause of diseases, the origin of sea animals, transformation of man into animal, and vice versa, the belief in a most powerful spirit *Toornaarsuk*, etc. are discussed. Comparative notes are given on corresponding beliefs of Eskimos in Alaska and other places, also parallels to the beliefs of Chukchis, Gilyaks, Yakuts and other Asiatic peoples.

Copy seen: DLC.

32427. THALBITZER, WILLIAM CARL, 1873- . Possible early contacts between Eskimo and Old World languages. (International Congress of Americanists. 29th, New York, 1949. Selected papers, v. 3, *Indian tribes of aboriginal America*, Chicago, 1952, p. 50-54)

Contains an attempt to relate Eskimo to other languages. Comparisons were made between Eskimo and Asiatic languages, and Eskimo and North American Indian languages. After some fifty years of investigation, the author came to the conclusion that "Eskimo is not related to any other language in the world", however, some loan-words in Eskimo from other languages, or vice versa, may be possible. **Copy seen:** DLC.

32428. THALBITZER, WILLIAM CARL, 1873- . The soul of the Eskimo language. (In: Congrès International des Sciences Anthropologiques et Ethnologiques. 1st, London, 1934. Compte rendu, p. 240-41)

Contains some conclusions on the Eskimo mentality drawn from their language: they are an arctic, shamanistic, hunting people; their modes of expression are widely different from ours; they are however, by now very remote from the common starting point of mankind.

Copy seen: DLC.

32429. THALBITZER, WILLIAM CARL, 1873- . Two runic stones, from Greenland and Minnesota. Washington, D. C., Smithsonian Institution, 1951. 71 p. 5 text illus., 2 plates, fold. table. (In: Miscellaneous collections, v. 116, no. 3)

Contains a runological study of two stones with Nordic inscriptions: one from a small island in West Greenland (72°58' N., 56°14' W.), the other from Minnesota near the village of Kensington (47° N., 96° W.). The first, very small, was found in 1824 by Pelimut, an Eskimo, and sent to the Museum at Copenhagen: its authenticity is recognized by runologists generally, and its inscription estimated to date from about 1300 A. D. The large Kensington stone dug up in 1898, bearing the date 1362 has aroused controversy however, and is considered a forgery by several authorities. Thalbitzer points to the resemblance between the inscriptions on the two stones, and modifying his earlier view somewhat, he states "... after all, the inscription may be authentic" (p. 4); but again (p. 54) "To this day it must be admitted that the authenticity of the inscription is uncertain." Reviewed by W. S. Godfrey, Jr. in: *American anthropologist*, Apr.-June 1953, v. 55, no. 2, pt. 1, p. 275-76.

(Pflügers Archiv für die gesamte Physiologie 1952. v. 255, no. 1, p. 27-45, illus. table) 17 refs. **Title tr.:** The difference threshold of cold- and warm sensation in relation to the absolute air-resp. skin temperature.

Contains a study based on measurements of energy exchange required for cold or warm sensations in healthy men. In addition rectal, mouth and skin temperatures were determined. The findings are in disagreement with Weber's theory of temperature sensation.

Copy seen: DSG.

THAUER, RUDOLF, see also Ebaugh, F. G., and R. Thauer. Influence of various environmental temperatures on the cold and warmth thresholds. 1953. No. 28855.

32432. THEIS, FRANK V., and others. Anticoagulants in acute frostbite. (American Medical Association. Journal, 1951. v. 146, no. 11, p. 992-95, 2 fig.) 16 refs. **Other authors:** W. R. O'Connor, and F. J. Wahl.

Contains an account on 14 out of 30 patients with acute frostbite, treated with anticoagulants; average time of exposure was 11 hours, age of patients (all males) 35-80 years. The results were most gratifying, hospitalization reduced and patients returned to normal activities more quickly. Abstracts of case histories are presented to illustrate treatment and results with and without anticoagulants.

Copy seen: DLC.

32433. THELANDER, H. E. Epiphyseal destruction by frostbite. (Journal of pediatrics, Jan. 1950. v. 36, no. 1, p. 105-106, illus.) ref.

Contains account of a case apparently rarely observed or reported sequels. In a boy, aged nine, who suffered frostbite two-and-a-half years earlier, the fingers of the injured hand were found to be shorter, the distal and middle joints flattened and thickened; the epiphyses of the middle and distal articulations of the second to fifth digits missing, the

diaphyses roughened, etc. The injured hand is shorter than the other and becomes blue and painful on chilling.

32434. THERKILSEN, KJELD RASK. Fra kajak til kutter; the livelihood of Greenland. (In: Turistforeningen for Danmark. Årbog 1952-53, pub. 1952, p. 117-32, illus.) **Title tr.:** From kayak to cutter; the livelihood of Greenland.

The evolution from stone-age techniques to those of a modern industry has taken place in less than half a century in the Greenland fishery. Greenland has now the world's richest fish resources, more than a hundred different species being taken in the adjacent arctic and subarctic waters. Climatic changes in conjunction with Danish influence and modern methods are responsible for a more diversified and productive economy, and for improved social and cultural conditions.

Copy seen: DLC.

32435. THERKILSEN, KJELD RASK. Grønland—fjeld, hav og is. (In: Turistforeningen for Danmark. Årbog 1952-53, pub. 1952, p. 7-26, illus.) **Title tr.:** Greenland—mountain, ocean and ice.

Contains a description of physical features, vegetation, animal life, and of man's struggle for life in Greenland. The ice mass which covers about five-sixths of its area is said to move outward at a speed of about 20m. a day. The island continent is so far north (60°-83° N. lat.) that it has either too much or too little light during most of the year: the sun does not set for four months in summer, and for four months in winter it is not seen.

32442. THOMAS, R. I. Arctic air photography. Pt. 1, Operational problems in arctic survey photography. (In: American Society of Photogrammetry. Panel on arctic mapping. pub. in Photogrammetric engineering, June 1953. v. 19, no. 3, p. 385-87)

Contains a discussion of problems of aerial mapping in Canada, including the selection of air bases large enough for air-photo planes, provision of gasoline and oil, climate, communications, navigation, training of crew, and servicing of planes. Climatic and navigational difficulties are stressed. Excellent photographic weather prevails only during the approximately two-week period between the snow going and open water, after which clouds hamper flights. Navigation is the most difficult problem as the area photographed is centered around the Magnetic Pole where the magnetic directional compass is of little use. Major

problems will be simplified by improved maps, installation of radio aids, development of improved directional instruments, and improvement of radio photography. Author is Commanding Officer, R.C.A.F. Station, Rockcliffe, Canada. **Copy seen:** DLC.

32443. THOMPSON, DANIEL Q. Summer food preference of the brown and collared lemmings. (*In: Alaskan Science Conference . . . 1951. Proceedings, pub. 1953, p. 347*)

Nearly 50 species of plants were tried on captive animals and some observations on their food in the tundra made. Considerable variation in food preference was observed between the two species. **Copy seen:** CaMAI; DLC.

32444. THOMPSON, DOROTHY J. The Eskimo woman of Nome, Alaska, and her changing role and status. (*In: Alaskan Science Conference . . . 1951. Proceedings, pub. 1953, p. 251-55*)

Contains account of the changed situation of the Eskimo woman: formerly the wife, keeper of the household, and expert sewer of skins, recently (since 1941) she works as waitress, clerk, secretary, and nurse's aid. Illegitimacy and arrests for drunkenness have increased heavily since World War II. The full-blooded Eskimo women still prefer their native clothing and food (mostly dried fish), while the half-bloods dress and eat in the manner of Whites. Need for adult education and recreation is evident. **Copy seen:** CaMAI; DLC.

32445. THOMPSON, HUGH R. Geology and geomorphology in southern Nordaustlandet (North-East Land), Spitsbergen. (Geologists' Association, London. Proceedings, Dec. 1953. v. 64, pt. 4, p. 293-312, 2 plates, 3 sketch maps) 20 refs.

Contains a description of 150 square miles in southwest Nordaustlandet near the base camp of the Oxford University expedition in July 1949. Carbo-Permian, Triassic, and Cretaceous (or early Tertiary) rocks are described, followed by a discussion of shorelines, raised beaches, melt-streams and topography. Periglacial weathering features, glacial deposits, Vegafonna and Sørfonna icecaps, and the island of Karl Alexanderøya are also discussed. A note on Triassic rocks by K. S. Sandford is appended. **Copy seen:** DGS.

32446. THOMPSON, HUGH R. Oxford expeditions to Nordaustlandet (North East Land), Spitsbergen. (Arctic, Oct. 1953. v. 6, no. 3, p. 213-22, 3 text maps) 36 refs.

Five expeditions are described: those of Binney 1923 and 1924, Glen 1935-36, and Hartog 1949 (in which the writer took part) and 1951. Binney's expeditions were important for geographical discovery, while those of Glen and Hartog pursued more detailed work in geomorphology, glaciology, meteorology, and surveying. Few results of Hartog's work are yet published. Earlier expeditions of other origin are briefly noted. **Copy seen:** CaMAI; DLC.

THOMPSON, HUGH R., *see also* Baird, P. D., and others. Baffin I. Exped. 1953. 1953. No. 27932.

32447. THOMPSON, J. I. Shoran controlled photography in Canada. (Photogrammetric engineering, March 1953. v. 19, no. 1, p. 42-47)

Contains a discussion of the importance of shoran in installing ground control for aerial photography, and of developments in Canada, 1948-1952. By 1951 a geodetic shoran net extended down the Mackenzie River to the arctic coast. In June-Sept. 1952 a large shoran photographic operation took place over 100,000 square miles in the Mackenzie valley, based at Yellowknife, Great Slave Lake. Techniques are discussed in some detail, with emphasis on aircraft-to-ground communications, establishing auxiliary stations, climatic problems, and costs. **Copy seen:** DGS.

32448. THOMPSON, STANLEY F. Construction in permafrost. (Western construction news, Oct. 1953. v. 28, p. 63-65, illus.)

"A new type of permafrost with gravel particles separated by ice layers to an extent that appreciable settlement will occur upon thawing was encountered at Ladd Air Force Base (Alaska). This formation cannot be detected by auger

or drills but is always associated with loose openwork gravel. Excavation seems to be the only remedy to construction failure. General construction methods used in permafrost areas are reviewed. Silt is removed by ripping, thawing and/or blasting. Frozen gravels are thawed and compacted under certain conditions. Construction on the undisturbed permafrost is resorted to when the silt is too deep for economical removal. The most successful method is artificial refrigeration. The most often used but least successful is the rigid floating slab method."—SIPRE.

Studien VI-VIII, XI-XIV, XV, XIX-XXIII. (Zoologischer Anzeiger, 1906. Bd. 29, no. 25-26, p. 761-90, illus.; (XI-XIV) 1906, Bd. 30, no. 15, p. 463-84, illus.; (XV) 1907, Bd. 31, no. 4, p. 105-115, illus.; (XIX-XXIII) 1907, Bd. 32, no. 6, p. 150-72, illus.) **Title tr.:** Studies on *Lebertia* VI-VIII, XI-XIV, XV, XIX-XXIII.

Contains a critical revision of all known fresh-water mites of the genus *Lebertia*, with synonyms, descriptions, diagnoses of some new species, measurements, critical notes and data on morphology, ecology and geographic distribution. Five species native to northern regions of Norway are described, including *L. (Hexalebertia) theodora* n. sp. from Altenelv, Finnmark. Part XXIII contains also an analytical table of 30 species of *Lebertia*, (p. 165-72). The parts of this work not enumerated do not include arctic material.

Contains descriptions of six new fresh-water acarids, collected in Kamchatka by the F. P. Rjabushinskii Expedition in 1908-1909.

Copy seen: MH-Z.

32454. THOR, THORKEL SIGVALDT TORKELSON, 1856-1937.

Neue Beiträge zur Kenntnis der invertebraten Fauna von Svalbard; nach Sammlungen von Garteninspektor L. Lange, Dozent B. Lynge und dem Verfasser. (Zoologischer Anzeiger, 1934. Bd. 107, no. 5-6, p. 114-39, illus.) *Title tr.*: New contributions to the invertebrate fauna of Svalbard; based on collections of Garden Inspector L. Lange, Dozent B. Lynge and the author.

Contains a systematic list of 50 acarids (mostly moss mites) with synonyms, descriptions of Brachychthoniidae n. fam. and four new species, critical notes and data on habitat, as well as geographic distribution of these mites native to Svalbard. A simple list of 37 moss mites brought home by L. Lange from Nordkap in northern Norway is added; 18 of these occur also in Svalbard.

Copy seen: MH-Z.

32455. THOR, THORKEL SIGVALDT TORKELSON, 1856-1937. Norwegische Alycidae I-VII. (Zoologischer Anzeiger, 1931. Bd. 94, no. 9-10, p. 229-38) *Title tr.*: Norwegian Alycidae I-VII.

A critical revision of moss mites of the fam. Alycidae inhabiting Norway, with description of a new genus *Epistomalycus*; synonymy and critical notes on *Nanorchestes arboriger*, native to northern Norway and Svalbard.

Copy seen: MH-Z.

32456. THOR, THORKEL SIGVALDT TORKELSON, 1856-1937. Norwegische Anystidae I. (Zoologischer Anzeiger, 1912. Bd. 39, no. 11-12, p. 387-90) *Title tr.*: Norwegian Anystidae I.

Contains synonymy of acarine family Anystidae, of genera *Anystis* and *Erythracarus*, and of three species, including *A. baccharum* native to Finnmark, northern Norway, with brief data on habitat.

Copy seen: MH-Z.

32457. THOR, THORKEL SIGVALDT TORKELSON, 1856-1937. Norwegische Tydeidae VIII-XV, mit Bemerkungen über die Gattung *Tydeus* und über Augen, Tracheen usw. (Zoologischer Anzeiger, 1932. Bd. 98, Heft 3-4, p. 69-91, illus.) *Title tr.*: Norwegian Tydeidae VIII-XV, with notes on the genus *Tydeus* and on eyes, tracheae, etc.

Contains a discussion of the genus *Tydeus*, a key to its species of which six

are listed and four described as new. One of these, *T. svalbardensis* n. sp., is noted as first discovered on Svalbard and later found in Norway. One new genus (*Triophlydeus*) and two species of other genera of these moss mites are also described. Pt. I-VII of this work do not contain arctic material.

32459. THORARINSSON, SIGURDUR. Vinlandsproblemet. Några reflexioner med anledning av V. Tanners skrift. (Ymer, 1942. Årg. 62, häfte 1, p. 39-46, map) *Title tr.*: The Vinland problem. Some retrospective considerations with regard to V. Tanner's paper.

Contains a résumé of various theories as advanced by a number of scientists other than Tanner. The confusion because of the name "Vinland" is discussed along with its geographical location. The means by which the bog-myrtle *Myrica gale* and other plants became distributed on both sides of the North Atlantic, if not by Norsemen, are speculated upon. The Vinland problem is of some significance, and it should be solved by modern Norsemen.

32460. THORELD, AND. FERDIN. Beskrifning på ett mineral, funnet i Kuusamo socken af Uleåborgs Län. (Finska vetenskaps-societeten, Helsingfors. Acta Societatis scientiarum fennicae, 1852. v. 3, p. 815-23) *Title tr.*: Description of a mineral found in Kuusamo parish of Uleåborg province.

The author describes a mineral which he found on the shore of Lake Yli-Kitka (Ylikitkajärvi) in Kuusamo parish (65°57' N. 29°12' E.) in the summer of 1850, as well as the chemical analyses to which he subjected it. Its crystallization, cleavage, streak, luster, hardness, and specific gravity are indicated. It reacts as iron after fusion with borax. Thoreld presents a formula for the mineral and

suggests that it be named *Gongylit* because of its globular form.

Title tr.: The search for gold in Finland during 1837-1850.

Several geognostic and gold-prospecting investigations were conducted in northern Finland between 1837 and 1850, chiefly along the Kemi River and in the lake region of Kuusamo near the Russian border. In 1844, 1847, 1848, and 1850, 108 rivers and streams and 417 brooks were prospected for gold, but without tangible results. The report by E. Hofmann on his 1844 trip up the Kemi River is reprinted. (He had circled the globe with Otto von Kotzebue in 1823-26 and accompanied Alexander von Humboldt to the Ural and Altay Mts. and the Caspian Sea in 1829). **Copy seen:** DLC.

Collection of specimens from the deep sea basins and coastal waters of Baffin Bay - Davis Strait was made. Localities represented in the total collection were: (1) Canadian coastal waters from Labrador north to Ellesmere Island; (2) West Greenland coastal waters, Julianehaab to Etah; (3) deep sea south of the Cape Walsingham-Holsteinsborg ridge; and (4) the isolated deep sea basin north of this ridge. A summary of knowledge of marine molluscs in each of these areas is given, followed by a systematic list of 86 species from 48 localities, with references, physical description, locality found, and world-wide occurrence. A detailed discussion of ecology, and a section (p. 83-92) on taxonomy of North Atlantic species of *Saxicava* (based on

unpublished material by A. S. Jensen) are included. **Copy seen:** DSI.

32463. THUMAN, WILLIAM C., and E. ROBINSON. Studies of Alaskan ice fog particles. Stanford, Calif., Sept. 30, 1953. 6 p. illus., graphs. (Stanford Research Institute, Stanford University. Report no. 10; Contract no. AF 19 [122]-634, SRI Proj. No. CU-473) 10 refs.

"Particles were collected on glass slides and subsequently replicated or observed under the microscope. The aerosols formed at surface temperatures ranging from -20° to -44° C. The collected material was classified as hexagonal plates, prismatic columns and droxtals, a droxtal being an equant solid particle with rudimentary crystal faces. The hexagons and prisms are several times larger than the droxtals and all three types tend to be smaller at lower temperatures. The droxtals increase in relative number with decreasing temperatures. The high incidence of restricted visibility at low temperatures is attributed to the presence of the droxtals."—SIPRE.

32471. TIKHOMIROV, BORIS ANATOLEVICH. Na Taymyr za mamontom. (Vokrug sveta, Aug. 1950, no. 8, p. 42-49, illus.) **Title tr.:** To the Taymyr for a mammoth.

Account by the botanist, of an expedition in June-Aug. 1949, headed by Prof. L. A. Portenko and sponsored by the Academy of Sciences U.S.S.R. and Main Administration of the Northern Sea Route. The trip was made by aircraft from Moscow, via Arkhangel'sk to Vostochnaya Bay on Taymyr Peninsula, thence by a cross-country motor vehicle ("vezdekhod") to the banks of Mamontovaya River in the Nizhnyaya Taymyra basin. The excavation of remains of a

mammoth discovered in 1948, is described and spring and summer conditions in this area noted on the basis of the botanical, zoological and ornithological work carried out by members of the party.

32472. TIKHOMIROV, BORIS ANATOL'EVICH. O geograficheskom rasprostraneni bugrov-baldzharakhov na severe Evrazii. (Priroda, 1948, no. 1, p. 51-53, illus.) 24 refs. **Title tr.:** On the geographic distribution of pingos ("baldzharakh") in northern Eurasia.

Deals with geographic range of icing mounds or pingos, peculiar hillocks (baldzharakh) previously described from the coasts of Laptev and East Siberian Seas. The author found them also on Dikson Island, in northern Yakutia, and on Taymyr Peninsula, where he observed their formation and development in the period 1937-47. They occur in regions of fossil ice and permafrost. The increasing intensity of the process of arctic erosion and the recent westward expansion of icing mounds is explained by destruction of the plant cover (mosses) and denudation due to solifluction, snow erosion, activity of animals, and man, and to the warming up of the Arctic. The further expansion of icing mounds and their occurrence in non-arctic mountainous regions may be expected. A selective bibliography is given.

Contains a general description of the mounds locally termed "baldzharakh," which are formed as the result of the melting of fossil ice in permafrost areas. Their genesis and development are discussed, samples of their peculiar vegetation analysed, and the identified plants (shrubs, herbs, mosses and lichens) listed. The region of the study is in the vicinity of Tiksi Bay. The importance of these mounds as a handicap to construction work and as a factor in the deformation of the vegetative cover is stressed.

32489. TIZZONI, G., and G. DE ANGELIS. Ricerche microscopiche sui congelati; contributo alla patogenesi della congelazione. (Giornale de medicina militare, 1917. anno 65, fasc. 1, p. 5-28) 23 refs. **Title tr.:** Microscopic investigations on frostbite; contribution to the pathogenesis of frostbite.

Contains introductory notes on cold injuries in wars; earlier studies on experimental frostbite, its pathogenesis and pathology; gangrene due to frostbite, etc. This is followed by a histological study of human frostbite material with emphasis on the vascular system, which appeared to be the main seat of injury. Various types of therapy are critically discussed in the light of these findings.

32490. TJEDER, BO. *Elephantomyia edwardsi* Lack. and *Pedicia littoralis* Mg. in Sweden (Dip. Tipulidae). (Opuseula

entomologica, 1953. Bd. 18, häft. 2-3, p. 231-32, illus.)

Includes descriptive notes and data on total distribution of a very rare crane fly, *Elephantomyia edwardsi*, which was known on the Scandinavian Peninsula only in northern Finland (Korvasvaara, between Salla and Kuusamo). The first find of this species in Sweden was made by K. Ander in Skärälid, Scania.

Copy seen: MH-Z.

32491. TJEDER, BO. Faunistical notes on Swedish Neuroptera. (Opuscula entomologica, 1953. Bd. 18, häft. 2-3, p. 227-28)

Contains additional distributional data to 13 species of Swedish neuropters. *Boriomyia enontekiensis* known previously only from Finnish Lapland (Enontekio, Muonio) is found in Sweden, also *Groscus bore* is recorded in the Luleå region of Norrbotten, northern Sweden.

Copy seen: MH-Z.

32492. TJEDER, BO. Neuroptera et Mecoptera. (In: Catalogus insectorum Sueciae. Additamenta ad partes I-X, 1953, I, p. 71) **Title tr.:** Neuroptera and Mecoptera.

Contains a list of 53 neuropters and four mecopters, with additional distributional data to the author's original catalog, 1940 (*Arctic Bibliography*, No. 26732). Includes *Boriomyia enontekiensis*, a species new to the fauna of Sweden, and some other species native to Swedish Lapland, bringing the Swedish total to 70 neuropters, five mecopters.

Copy seen: MH-Z.

32493. TODD, RAMONA LUCILE, 1910- . The cold pressor test. (*Journal-Lancet*, Dec. 1944. new ser., v. 64, p. 410-13, 2 illus., 5 tables) 19 refs.

Contains a study of responses to the cold pressor test in 88 university students. These were not significantly greater in persons with hypertension than in those with normal blood pressure; no relationship between family history of hypertension or stroke, between pressure rise and height-weight index, age or nationality was evident; repeated tests did not elicit constant response. It is indicated that the mechanism is a vaso-pressor reflex reaction due to stimulation of the cutaneous nerves of pain and temperature.

32494. TODD, WALTER EDMOND CLYDE, 1874- . A taxonomic study of

the American dunlin (*Erolia alpina* subsp.). The Washington Academy of Sciences. *Journal*, Mar. 1953. v. 43, no. 3, p. 85-88)

Contains a brief discussion of the study of the red-backed sandpiper, or dunlin, its distribution, and species. It is "circumboreal and Holarctic in its breeding range," spending its winters in more temperate regions of the Northern Hemisphere. Three "races" of North American dunlins are described and compared with Asiatic forms. *Erolia alpina articola* and *Erolia alpina pacifica* are found in Alaska and the North American west coast, and *Erolia alpina hudsonia* is found from the Mackenzie delta along the arctic coast and islands to Baffin Island and south along Hudson Bay to Churchill. **Copy seen:** CA:MAI; DSI.

Contains linguistic paper on Zyryan loan-words from the Karelians and Vepses: contrary to Yrjö Wichmann, Toivonen finds that Zyryan relations with the Vepses were much more intensive than with Karelians. Summary in German p. 511.

Copy seen: DLC.

32499. TOIVONEN, YRJÖ HENRIK, 1890-. Zum Problem des Protolappischen. (Suomalainen tiedeakatemia. Sitzungsberichte, 1949, pub. 1950. p. 161-89) *Title tr.*: On the problem of proto-Lappish.

Contains review of controversial theories on the Lapp origin, anthropology and language; the author analyzes 95 Lapp words which have no parallels in the languages of the Baltic Finns, but for which related words are to be found in the Samoyedic (60 cases), or Ostyak and Vogul (35 cases) languages. The origin of proto-Lappish language, therefore, must be sought in Samoyedic and Ugrie circles. Thus he concludes the theory of Samoyedic origin of the old Lappish gets new support.

32500. TOKAREV, SERGEÏ ALEKSAN. DROVICH, 1899-. Proiskhozhdenie fäktuskol narodnosti. (Akademiiä nauk SSSR. Institut istorii material'noi kul'tury. Kratkie soobshcheniä, 1941. vyp. 9, p. 58-62) *Title tr.*: The origin of the Yakut nation.

Contains an analysis of Yakut culture, language and folklore in quest of its ethnic origins. The prevailing theory since the 18th century has been that the Yakuts came from the south and are a Turcic people. The author tries to show that the whole problem is much more complicated, and that the Yakut culture is composed of several elements. Many of its features are not of southern origin, but either are indigenous inventions made later in the new northern environment, or are features adopted and reshaped under the influence of Tungus and Paleo-Siberians. Animal breeding was supplemented or replaced by the nordic forms of hunting and fishing; the Yakut dwellings (*balagan*) are akin to those of Paleo-Siberians; the clothing is of local origin; and the Yakut language may be of "unknown origin" (Radlov), only later becoming "Turcized". Tungus dialects of the Lena, Aldan, and Vilyuy basins obviously contributed to the formation of the Yakut language. The Tungusian elements in Yakut culture are often overlooked. The Yakut culture therefore, the author concludes, is composed of various elements, some brought from the southern steppes, others indigenously developed in the North or borrowed from other northern peoples.

Neue Folge, Bd. 11, Heft 3, p. 161-84, 13 illus. incl. map) *Title tr.:* Skin boats and swimming bags, and their geographical distribution in the past and at present.

Contains an ethnographical study based on literature, including notes on boats of the Koryaks, Kamchadals, Chukchis and Yukaghirs, their origin, technique of construction and their use (p. 178-80). Eskimo kayaks and umiaks used also by Aleuts and some Athapaskan tribes are described (p. 180-82). Map (p. 177) shows areas of boat types throughout the world including the arctic regions.

Copy seen: DLC.

32529. TREMBLAY, LEO PAUL, 1918- Giauque Lake map-area, Northwest Territories. Ottawa, Queen's Printer, 1952. 74 p. illus. 5 plates, 10 maps & plans (1 fold.) diagrs., graphs. (Canada. Geological Survey. Memoir 266) 21 refs.

Contains a geologic report on an area 50 miles northeast of Yellowknife, Great Slave Lake (63°03'-63°15' N., 113°46'-114°09' W.). Physical features are briefly summarized, followed by detailed discussion of volcanic, sedimentary, and intrusive rocks (with chemical analyses), structural, and economic geology. History, development, and geological de-

scription of 12 gold mining properties are given. **Copy seen:** DGS.

32530. TRET'IAKOV, P. N. Ékspeditsiia po izucheniiu "arkhticheskogo paleolita". (Sovetskaiia arkheologiia, 1937. no. 2, p. 227-28.) **Title tr.:** An expedition to investigate the "arctic paleolithic".

Contains a short report on expedition to the Rybachiy Peninsula in 1935, headed by B. F. Zemliakov (see his *Arkhticheskiĭ paleolit*, 1940). Three sites were discovered, small in size, well protected by mountains from the cold winds, and long uninhabited. Objects of quartz, flint and chalcedony were found, but no ceramics. Denison Lapp mud-hut dwellings were also discovered.

32531. TROELSEN, JOHANNES C., 1913- . An experiment on the nature of wind erosion, conducted in Peary Land, North Greenland. (Dansk geologisk forening. Meddelelser, 1952. Bd. 12, hefte 2, p. 221-22, illus.)

Contains a description of an experiment, made during the Danish Peary Land Expedition in 1950, on the blocks of silica earth of various shapes and sizes, to determine the amount of wind erosion in that area. The conclusion seems to be that only the direct impact of sand grains traveling along practically horizontal courses has any erosion effect.

Universitet. Nauchno-issledovatel'skii institut i muzei antropologii. Kratkie soobshcheniia o nauchnykh rabotakh, 1938-39, pub. 1941. p. 67-69, table 19 on p. 72) **Title tr.:** The Northern Ural expedition of the Museum of Anthropology.

Contains an account of results of the anthropological expedition in 1939, to investigate the racial composition of Voguls in the Ivdel'sk and Garinsk regions (district of Sverdlovsk), and the Russian population in the Vychera basin. N. N. Cheboksarov (leader), his assistant T. A. Trofimova, and two others took part. About 1200 persons were investigated: anthropometric data, blood group tests, fingerprints, 250 photographs and six face masks in gypsum were taken. The Voguls of Pelym, Vagil and Ivdel' are anthropologically a mixed group of several European and Mongoloid racial types. The influences of Mongoloid and East Mediterranean races are obvious on the upper Loz'va and its left tributaries. The Voguls of Garinsk and the upper Vychera are mostly descendants of Vogul-Russian 18th-19th century cross-breeds. The Russians of Vychera are of the Valdaĭ racial type, and their Uralic traits originated from the Vogulian admixture. Anthropological features of Vogulians and Russians are presented comparatively on table 19.

32534. TROLL, CARL, 1899- . Büserschnee <nieve de los penitentes> in den Hochgebirgen der Erde. Gotha, Justus Perthes, 1942. 103 p. illus., graphs, maps, diagrs. (Petermanns geographische Mitteilungen. Ergänzungsheft No. 240) 240 refs. **Title tr.:** Penitentes in the high mountains of the earth.

A detailed history of penitentes research is presented. Snow and ice ablation formations are classified. True penitentes result from selective ablation alone and are solid bodies of snow firm or ice in the shape of longitudinal pyramids or ridges. Penitentes of mixed formations are caused by selective ablation in combination with other causes, such as snow accumulation, avalanches, water erosion, or mechanical splitting. True penitentes form in the summer from snow of the preceding winter, usually

below the firn limit in subtropical and tropical mountains at high elevations (above 3000 m.). Favorable factors of penitentes formation are little or no summer precipitation, maximum solar radiation, dry air, high evaporation, daily temperature fluctuations from below 0° C. to above 0° C. throughout the year and large amounts of atmospheric electricity. The inclination angle of the penitentes depends on the maximum height of the sun and the incline of the snow surface. An equation relating these three factors is established. Periodical, episodic and perennial penitentes are distinguished. Perennial penitentes change into jagged formations."—SIPRE.

In chap. 4 on geographic distribution of penitent snow, a description is given (p. 94-95, plate 12) of penitentes in the Franz Joseph Fiord region of eastern Greenland as reported by C. E. Wegmann (q. v.), together with the local climatic conditions favoring their formation in this area. Reference is made also to the similar "snow cones" observed near Brucebyen West Spitsbergen by Tollner (*Arctic Bibliography*, No. 17784).

32535. TROMBETTI, ALFREDO. Origine asiatica delle lingue e popolazioni americane. (International Congress of Americanists. 22nd, Rome, 1926. Atti, pub. 1928. v. 1, p. 169-246, tables) **Title tr.:** The Asiatic origin of language and population of America.

Contains chiefly a linguistic study searching for parallels between the indigenous American and Indo-Chinese languages: personal pronouns, numerals, and a number of lexical cases of the two linguistic groups are compared. Examples are taken from Tsimshian, Haida, and several other Indian languages. Inhabitants of the Americas were not autochthonous but immigrants from the Old World. The immigration started at the end of the Quaternary period, continued during the neolithic and the first part of the bronze age. All indigenous American peoples belong to one Mongolian race. The only possible way into the continent was by Bering Strait.

32536. TROMHOLT, SOPHUS, 1851-1896. Under the rays of the aurora borealis: in the land of the Lapps and Kvaens. London, S. Low, Marston, Searle, and Rivington, 1885. 2 v.: xii, 288; x, 306 p., illus., plates, fold. map.

Translated and edited from the author's manuscript by Carl Siewers.

Narrative of the author's travels and work in 1882-83 carrying out auroral investigations at the Lappish village of Kautokeino, 63 miles south of Bossekop, the Norwegian station participating in the First International Polar Year program. Following an introductory sketch of the program's organization and objectives and of his own trip north from Bergen to Alten thence to Bossekop and Kautokeino, he describes in considerable detail, Lappish life and customs: clothing, boats, and dwellings (p. 66-83), reindeer camp, tents of the mountain Lapps, their domestic utensils, dogs as herders, lassoing and milking of reindeer (p. 112-21); the seasonal wandering of the Lapps, the mountain, sea and river Lapps (p. 124-31); the Kvaens or immigrants from Finland (p. 132); travel by foot or skis, by boat, shooting the rapids (p. 135-42); the work of men and women, the baby and its cradle (*komse*), treatment of children and old people, physical appearance, character traits, expressions of greeting (p. 142-56). Chap. 8 deals with the reindeer and its importance to the Lapps (p. 159-73); Lapp singing (*juviking*), family names, sleigh burial in olden times, wedding and courting customs; school at Kautokeino.

Incidental references to the author's scientific work are made throughout, and (chap. 10, p. 192-288) an account is given, with illus., diagrs., etc., of auroras, their principal forms, classification, character and appearance at Kautokeino, geographical extension, height, etc. In vol. 2, the author's travels by pulk are described: to Hätta, Muoniovarre, Muonioiska, and Karesuando, with accounts of Laestadians and their activities (chap. 2), an evangelical revival, etc.; the Finns, their dress, bathhouses, etc.; a court session at Kautokeino and Lapp ethics; a *sieite* or old stone god (p. 140-42); the sea Lapps of Laerreds Fjord and their turf-covered dwellings (*gamme*) (p. 208-213); differences in the character of the sea Lapps, Norwegians, and Kvaens (p. 214-16); the Finnish polar year station at Sodankylä (p. 144-81). Chap. 7-10 (p. 203-299) recount the experience of a trip by steamer from Alten along the coast to Hammerfest, Nordkap, and eastward to Vadsø and settlements around Varanger Fiord and Elvenes in Russian Lapland at the mouth of Pasvik River, noting the famous bird mountain Svär-

høltklub (p. 264) and another near Fin-
kongkøjlen (p. 269), the work of As-
tronomer Hell at Vardø in 1769, local
fisheries, whale hunting at Vadsø, the
Russian church and Lapps at Boris-Gleb,
etc. A useful index is appended, and
numerous photo-illus. and pencil sketches
of individuals, settlements, landscape,
etc., depict various aspects of native life.

32539. TROSHCHANSKIĬ, VASILĬ FILIPOVICH, 1843(?)—1898, and others. Èvolutsiia chernoi viery (shamanstva) u ikutov. Kazan', 1902. iv, 186, 13, ii p. 10 plates. (Kazan'. Universitet. Uchenyia zapiski, Apr. 1903. god 70, kniga 4, Prilozhenie 2) about 150 refs. **Title tr.:** The evolution of the black religion (shamanism) among the Yakuts.

A substantial study, based on literature and personal investigations, which, after Troshchanskiĭ's death, was completed (in four supplements on p. 167-85) by E. K. Pekarskiĭ, A. A. Naumov, and V. V. Popov, and edited by these three authorities and N. F. Katanov, who contributed the introduction. The first part (p. 1-107) deals with Yakut mythology

and the evolution of their religious ideas: animatism and animism, beliefs in helpful and harmful spirits (*ajy* and *abasy*); their gods (supreme god Urun ajy Tojon, his relation to the sun, thunder, and the other gods), the secondary deities and their functions. Yakut nature worship and spirits of nature (*ichehi*) are described, their spirits of the household and of places, respect for animals, conceptions of three kinds of soul (*tyn*, *kut* and *sür*), beliefs on diseases, on death and the after-life; their two kinds of burials (interment and platform burial), relations between the living and dead, ancestor worship, representations and idols, sacrifices and feasts. Pt. 2 (p. 108-166) deals with shamanism: the person of the shaman and his disposition (*mänarik* or nervous condition), his drum and other instruments, coat, education and initiation; the white and the black shaman, whose *sür* or soul was produced by *ajy* and *abasy* respectively. The author is an evolutionist: he takes nature worship as the oldest religious conception, the *ajy* came later, the deity of heaven developed from the deities of sun and thunder, etc. The dualistic character of the Yakut religion is stressed. The original homeland of the Yakuts and peoples related to them are investigated in chap. 2. Shamanistic costumes, drums and other requisites appear in photo. illus. with explanatory notes.

32540. TROSHCHANSKIĬ, VASILĬ FILIPOVICH, 1843(?)—1898. Nabroski o ikutakh Iakutskago okruga. Pod redaktsiei i s primichaniiami E. K. Pekarskago. Kazan'. Tipo-litografiia Impago Universiteta, 1911. 144 p. (Reprinted from: Kazan'. Universitet. Obshchestvo arkheologii, istorii i ètnografii. Izvestiia, 1911. t. 27) **Title tr.:** Sketches on the Yakuts of the Yakutsk District. Edited and supplemented by E. K. Pekarskiĭ.

A popular monograph written in 1893, the first two chapters of which were in *Zhivaia starina* (see *Arctic Bibliography*, No. 18002-18003). Social and economic conditions are portrayed: love and marriage, economy and property, agriculture, animal husbandry, demography and family life (vital statistics, early marriage age, wedding customs, adoption, care of the aged). These people are inclined to trade as their means to wealth; ethics and morals are described: trading meth-

ods, cheating, habits of smoking, drinking and gambling, distrust of everybody. The administrative organization is described, also schools, health conditions, diseases and popular medicine (p. 112-18, especially eye ailments and nervous disturbances, *mándrik* and *ömürák*, mostly among women). The budget of a Yakut family, crafts and blacksmith work are sketched. The cultural influence of the clergy and sectarian deportees, contact with the Russians, are discussed, with note of remains of former clan organization, the role of the wealthy, and corporal punishments. **Copied seen:** MH.

32541. TROUESSART, ÉDOUARD LOUIS, 1842-1927. Note préliminaire sur les acariens marins (Halacaridae) recueillies par S. A. S. le Prince de Monaco dans les mers arctiques. (Société zoologique de France. Bulletin, 1902. t. 27, p. 66-70) **Title tr.:** A preliminary note on marine acarids (Halacaridae) collected in the arctic seas by the Prince of Monaco.

Contains a list of nine species of marine mites of the fam. Halacaridae collected in Svalbard waters by Princess-Alice, includes descriptions of *Halacarus alberti*, *H. coecus*, *H. princeps* and *H. (Copidognathus) richardi* n. spp., and critical notes on three other species from the same region. **Copied seen:** MH-Z.

32542. TROUP, W. D. G. Arctic convoy. (In: Inter-Allied Conferences on War Medicine, London, 1942-1945, pub. 1947. p. 361-63)

Contains a short account of a trip with a convoy, from Britain to Arkhangel'sk in April 1943. It includes the author's experience with battle cases, immersion foot and frostbite aboard his ship; and his observations on conditions in the military hospitals in Arkhangel'sk.

Contains description of fowling in August after the season's work in the fields is done. The hunters go alone, accompanied by a dog and perhaps a son growing up; they stay three to five days in the woods but not farther than 50 km. from home. The hunter's footwear and

clothing of the Zyryan mode (*laz*) are described; his food supply, equipment (axe and knife, no gun), details on trap and snares are noted. Such practices as trail blazing, speaking kindly of the game (no swearing), the hunters' huts and elevated storage places, behavior, ethics, etc., are briefly discussed.

32550. TSENTRAL'NYĬ MUZEĬ NARODOVEDENIĀ, Moskva. Religioznye verovaniā narodov SSSR. Sbornik etnograficheskikh materialov. Pod obshefel redaktsei V. K. Nikol'skogo. Moskva-Leningrad, Moskovskii rabochii, 1931. 2 v.: 384, 392 p. text tables, illus., refs. (Tsentral'nyi sovet soūza voinstvuishchikh bezbozhnikov SSSR) **Title tr.:** Religious beliefs of peoples of the U.S.S.R. A collection of ethnographical materials. General editor V. K. Nikol'skii. (Central Council of the Union of Militant Atheists of the U.S.S.R.)

Readings assembled from various, mainly published, sources, by the staff of the Central Museum of Ethnology. The selection and presentation is directed toward study, from the Marxian viewpoint, of the origin and different stages of religion. The readings are preceded by the editor's foreword, stressing the necessity of combatting shamanism and some new religions. A general

introduction "Velikiĭ soūz narodov" (The Great union of peoples), p. 6-29, gives in tabular form: the numbers, religion, and percentage of literacy for each national group in the U.S.S.R. in 1926. Then follows presentation of the native religion of each nationality: pt. 1 *Siberia and the North*, includes the Chukchis, Koryaks, Yukaghirs (p. 39-66, 17 refs.), Yakuts (p. 160-79, 3 illus., 40 refs.), Ostyaks and Voguls (p. 202-216, 20 refs.) compiled by S. A. Tokarev; the Gilyaks, Golds, Tungus (p. 67-121, 10 illus., 17 refs.), and Samoyeds (p. 217-27, 5 illus., 5 refs.) by M. G. Levin; the Lapps (p. 228-37, illus., 5 refs.) by R. S. Lipets.

Pt. 2 concerns *Central Siberia*, and (in v. 2.) pt. 3, the *Caucasus*. Pt. 4, *Volga and Urals*, includes the Zyryans and Permians (p. 228-48, illus., 24 refs.) compiled by A. G. Apollov. Pt. 5 concerns *Europe*. Appended (p. 365-87) is index covering both vols. For each people, a brief introduction is given, followed by selected excerpts from the writings of various investigators, etc., under such headings as cult of hunters and fishers (or reindeer breeders), ritual in family life, shamanism (with numerous subheadings), spirits, relics of totemism, magic, bear festivals, etc.; and a bibliography closes the treatment of each people.

32560. TURKOV, N. M. 30 let otechestvennogo rechnogo sudostroyeniā. (Rechnol transport, Nov.-Dec. 1947. t. 7, no. 10, p. 11-14, table, illus.) **Title tr.:** 30 years of Soviet river-boat building.

The increase of ship-building for river transport in successive five-year plans is surveyed, and the principal ship-yards named. The main types of vessels operating on the inland waterways, among them the Lena, Kolyma and other Siberian rivers, are noted: river-boats, tugs, towing-barges, etc. The increase of power, efficiency and comfort in these craft, and the decrease in construction costs are emphasized.

32563. TUSHINSKIĬ, G. K. Laviny, voznikovenie i zaschita ot nikh. Moskva, Gos. izd-vo geogr. lit-ry, 1949. 213 p. 75 illus. (incl. charts, diagrs., 4 plates). (Moskovskii Ordena Lenina Gosudarstvennyi Universitet im. M. B. Lomonosova. Nauchno-issledovatel'skii Institut Geografii) 135 refs. *Title tr.*: Avalanches, their formation and protection against them.

"A general study was made of theoretical problems and experimental investigations related to avalanche formation. Various mountain regions of U.S.S.R. were checked to obtain data on snowslides, flows and other related movements. A classification of avalanches based on field study and examination of literature is presented. The processes of recrystallization in snow layers, snow profiles and the climate affecting avalanche formation are studied. The experimental work deals with mass movements, their potential force and the force of impact on various objects. The pressure waves caused by slides are described. Methods of avalanche control and protection are given. The appendix presents the technique of avalanche investigations and sets forth rules for safe operation in slide areas."—SIPRE. One of the regions studied was the Khibiny (Kola Peninsula), where great avalanches occurred on Kukisvumchorr Mt. in 1930, 1931 and 1934; regular observations were started in 1933 and snow-meteorological service was established in 1936.

32564. TUSHINSKIĬ, G. K. Snezhnye obvaly. (In: Vsesoŭznyĭ geograficheskii s"ezd. 2d, Leningrad, 1947. Trudy, 1949, t. 3, p. 306-313) *Title tr.*: Snow avalanches.

Contains classification of avalanches into snow slides (osovy) of about 50 to 100 m., and avalanches (laviny) following stream beds over a considerable distance. Factors in their formation and forecasting are discussed: steepness of slopes, age of the snow, morphology of slopes, and climate. Principles of charting avalanche danger are outlined with emphasis on geomorphological and geobotanical indications. The study is based in part on ten years' work at the Avalanche Station at Khibiny.

32565. TUTTLE, WAID WRIGHT, 1892-, and **J. L. TEMPLIN.** A study of normal cardiac response to water below body temperature with special reference to a submersion syndrome. (Journal of laboratory and clinical medicine, Dec. 1942, v. 28, no. 3, p. 271-76, 6 tables) 4 refs.

Contains an investigation of the response of 68 college women to submersion in water of swimming pool temperature. A drop in heart rate upon submersion was noted in "normally adjusted persons," which varied directly with the resting heart rate. Some subjects failed to show a decrease either due to emotional factors (fear) or due to lack of physiological adjustment. It is suggested that the latter cases represent sensitivity to water ("submersion syndrome").

Soviet achievements in developing artificial waterways are stressed in this paper dedicated to the 30th anniversary of Soviet rule. The main hydrotechnical constructions are noted briefly, among them the White Sea-Baltic Canal. Its economic and strategic importance, the speed (18 months) on its construction, and new technical methods used, its military significance in World War II, and its reconstruction in the post-war period are briefly sketched (p. 21).

32568. TWENHOFEL, WILLIAM STEPHENS, 1918- Potential Alaskan mineral resources for proposed electrochemical and electrometallurgical industries in the upper Lynn Canal area, Alaska. Washington, D. C., 1953. 14 p. text map. (U. S. Geological Survey. Circular 252) 59 refs.

"Diversion of the headwaters of the Yukon River through the Coast Range into the Taiya River valley [west of Skagway, southeastern Alaska] would make available about one million horsepower of electric energy. The only foreseeable use for any substantial block of this power is by electrochemical and electro-metallurgical industries." Such industries include: non-ferrous metals, ferroalloys, calcium carbide, artificial abrasives, nitrogen compounds, chlorine and caustic soda, iron and steel, carbon and graphitized products, phosphorous and phosphorous compounds. Raw materials needed and possible Alaskan sources are discussed, with conclusion that the bulk of the materials would have to be imported. Alaska could contribute sea water, olivine, dolomite, copper, zinc, nickel, tin, tungsten, iron, chromite, coal, and limestone, but at present only coal, limestone, and minor amounts of by-product zinc are produced.

32569. TWINN, CECIL RAYMOND, 1897- A review of studies of blood-sucking flies in northern Canada. (Canadian entomologist, Jan. 1952. v. 84, no. 1, p. 22-28) 27 refs.

"The biting-fly problem in the North, and the origin, purpose, methods, and results of research carried out from 1947 to 1950 by the Division of Entomology [Canada, Dept. of Agriculture] and co-operating agencies on behalf of the Defence Research Board [Canada] are discussed. The major pests of the sub-Arctic are mosquitoes, black flies, and tabanids [deer flies, moose flies]; of the Arctic, mosquitoes. The program has included studies on the species, their relative abundance, breeding places, life histories, hosts, flight ranges, and natural enemies, and on the effects of meteorological conditions on their abundance and activity. Methods of chemical

control on small and large areas have been developed, and tests made of protective clothing and repellents." Studies were carried out at Fort Churchill in Manitoba, Goose Bay in Labrador, and Whitehorse in Yukon Territory.

32570. TYLER, PAUL McINTOSH, 1889- Russia's mineral potential. (American Institute of Mining and Metallurgical Engineers. Transactions, 1951. v. 190, no. 6, p. 494-97; *pub.* in Mining engineering, June 1951, v. 3)

Included in this discussion are the recently opened Vorkuta coking coalfield of the Pechora basin, and the oilfields along the arctic coast at the mouths of the Lena and Yenisey Rivers, on the western arctic slopes of the Urals, and in the great bend of the Lena River. Mention is made of the very high death rate of the mine workers in the labor camps in the Kolyma goldfield of the Yakut A.S.S.R. A brief editorial review of this paper appears in *Mining engineering*, Nov. 1951, v. 3, no. 11, p. 934-35; and in the same issue (p. 949-50), a sharply critical review by Norman C. Stines, q. v.

32591. U.S.S.R. KOMITET PO DELAM GEOLOGII PRI SNK SSSR. Geologicheskaiá karta SSSR; mashtab 1:1,000,000. Leningrad-Moskva, Gosud. izd-vo geologicheskoi lit-ry, 1939-1957. **Title tr.:** Geological map of the U.S.S.R.; scale 1:one million.

At a special All-union geological conference held in Nov. 1938 (at Leningrad?) decision was made to start publishing the geological map of the U.S.S.R. in scale 1:one million. The work, planned in 174 sheets, was carried out under direction of the Committee for Geological Affairs of the Council of People's Commissars of the U.S.S.R. (since 1946 reorganized into Ministry of Geology of the U.S.S.R.); publication began in 1939, and in 1952 the work was regarded as largely completed. A key to the map sheets and other information on the undertaking are in: V. A. Aprodov, *Geologicheskoe kartirovanie*, 1952, q. v. Some (not all) sheets of this map, also

some explanatory notes (in pamphlet form) prepared to accompany map sheets, are in DGS; including those for the following northern sections: Arkhangel'sk (map and notes), Mezen' (map and notes), Murmansk (notes only). The explanatory notes are listed in the bibliography under the author's name; viz.:

1. SOKOLOV, P. V., and E. A. KAL'BERG. Ob'iasnitel'naia zapiska k listu Q-37 (Arkhangel'sk), 1939, 28 p.

2. ZEKKEI', I. A. D. Ob'iasnitel'naia zapiska k listu Q-38 (Mezen'), 1939, 20 p.

3. KHARITONOV, L. I. A. Ob'iasnitel'naia zapiska k listu R-36-37 (Murmansk), 1939, 19 p. *File seen: DGS.*

32592. U.S.S.R. KOMITET PO PROVEDENIU 2-GO MEZHDUNARODNOGO POLIARNOGO GODA. Aktinometricheskie nabludeniiia Vtorogo Mezhdunarodnogo Poliarnogo Goda, 1932-1933. Pod red. N. N. Kalitina. Leningrad, Gidrometeorologicheskoe izd-vo, 1937. 48 p. tables. *Title tr.:* Actinometrical observations during the Second International Polar Year, 1932-1933. Edited by N. N. Kalitin.

Contains an introduction with a list of observation stations, apparatus and methods applied, and explanations of the tables. The tables present observational data on solar radiation; total and dispersed radiation (according to the Kalitin, and the Arago-Davy-Kalitin pyronometer); terrestrial radiation and, total and dispersed illumination. The observations were made at station Polyarnoye (69°12' N. 33°26' E.); Bukhta Tikhaya (80°19' N. 52°48' E.); Matochkin Shar (73°16' N. 56°24' E.); Mastyr' (73°23' N. 126°35' E.); Bukhta Tiksi (71°35' N. 129°02' E.); Lavrentiya Guba (65°58' N. 170°05' W.) and on Mys Dezhneva (66°02' N. 169°40' W.). English summary of preface (p. 49).

32593. U.S.S.R. NARODNYI KOMISARIAT OBORONY. Nastavlenie dlia delstvii voisk zimoi. Moskva, Voen. izd-vo, 1941. 132 p. diags. *Title tr.:* Instruction for military operations during winter.

"Winter influences on attack and defense operations are described. Special instructions are given for prevention of frost injuries, transportation over ice and snow including transportation of wounded, construction of field stations and use of munitions and instruments

under winter conditions. Low temperatures, snowstorms and snow cover are considered important factors. Snow cover improves the visibility conditions. Snow depths over 30 cm. deep stops the transportation of cavalry and infantry, and at a depth of 50 cm. tanks are immobilized. Snow cover increases the effective range of poison gas released above the surface by smoothing the relief; the effectiveness of gas released by artillery shells bursting in the snow is reduced by strong snow absorption."—SIPRE.

Contains a series of documents captured from the counter-revolutionary forces, dealing with Allied intervention and occupation of the Murman and Arkhangel'sk, 1918-20. The phases covered by the sources include landing, occupation, local counter-revolutionary forces and activities, administration and government, justice, finances, military operations, underground activities of the communists, etc. *Copy seen: DLC.*

32594A. U.S.S.R. VSESOIUZNYI KOMITET STANDARTOV. Pushnomekhovoe syr'e; zimnie vidy. Izd. ofitsial'noe. [Moskva] Standartgiz, 1948. 200 p. illus. *Title tr.:* Fur raw materials; winter species. Official edition.

Contains All-Soviet standards for skins of Russian fur animals, including arctic species like polar bear, white fox, snow hare, etc. Specifications for each kind give descriptions of the pelt, the animal and its distribution; trade classes according to size, quality, defects; standards regarding the technical treatment of the skins; geographical varieties; seasonal varieties, etc. *Copy seen: DLC.*

32595. U. S. AIR FORCE. Survival. Washington, D. C., Dec. 1952. 152 p. illus. tables, maps, diags. (U. S. Air Force manual 64-5; supersedes AFM 64-5, 1 June 1945)

Contains instructions on how to survive when stranded in uninhabited areas of the Arctic, desert or Tropics, in three parts: 1, *Survival on land* (p. 1-117) deals with first aid, signaling, shelter, fire-making, clothing, water, food, etc., including conditions in the Arctic and sub-Arctic. 2, *Survival at sea* (p. 118-32) similarly, with sections on cold regions. 3, *Survival on sea-ice*, with information on immediate action, shelter, fire-making, food and water, etc. Extensively illustrated throughout.

Proceedings, *pub.* 1953, p. 270-72) "Revision by Alaskan Air Command of original paper presented by Capt. Phillip R. Stinchfield, U. S. A. F. Air Weather Service, Elmendorf Weather Control, Anchorage."

Contains description of the recurrence of cyclonic (low pressure) systems in the Gulf of Alaska, the normal weather sequence, and events during "low" and "high index" situations. The movement of an anticyclonic (high pressure) system with its source in the semi-permanent Siberian High is also briefly described. Actual synoptic situations are used to illustrate weather sequences.

(*Its*: SIPRE report, no. 10) Prepared by G. O. Guesmer, R. W. Gerdel, M. Diamond, J. A. Bender, M. H. Berg, and others; edited by H. Bader.

The organization, purpose, and scope of SIPRE are outlined; military requirements are analyzed in relation to cryptological problems and results of studies on the latter are reviewed. The known properties and engineering problems of (1) snow and ice, and (2) frozen ground, including permafrost, are summarized in considerable detail. Subjects requiring investigation are listed, and a précis is given of SIPRE research contracts.

32601. U. S. ARMY AIR FORCES. DIRECTORATE OF WEATHER. Average and maximum wind velocities at selected coastal stations in United States, Hawaiian Islands, Alaska and Puerto

Rico. Washington, D. C., U. S. Govt. Print. Off., Mar. 1942. 7 p. tables. (*Its:* Publications of the Weather Research Center, v. 3, no. 3)

Includes tabulated data (p. 7) on prevailing direction, average velocity, and maximum velocity in m. p. h. of the wind at the following Alaskan stations: Anchorage, Cordova, Juneau, Ketchikan, Kodiak, and Fairbanks.

Copy seen: DWB.

32602. U. S. ARMY AIR FORCES. DIRECTORATE OF WEATHER. Climate and weather of the Asiatic portion of the Union of Soviet Socialist Republics and of its air approaches. Washington, D. C., U. S. Govt. Print. Off., Nov. 1942. 77 p. text maps, graphs, tables. (*Its:* Publications of the Weather Research Center, v. 3, no. 4)

Siberia is divided into five regions, one of which lies wholly and three partly within the arctic area. Climate of each is briefly discussed. General flying and icing conditions are noted, followed by a more detailed treatment of air routes and flying conditions in each of the five areas, including discussion of winds, ceilings, fog, cyclonic storms, and icing. Stations used in the report are listed with lat. and long. Maps and tables show climatological data, including pilot balloon observations of upper air winds.

Copy seen: DLC; DWB.

32603. U. S. ARMY AIR FORCES. DIRECTORATE OF WEATHER. Discussion of arctic conditions by Dr. Vilhjalmur Stefansson, Special Consultant, Office Coordinator of Information, at a conference held at Headquarters, Army Air Forces, Directorate of Weather, April 4, 1942, Washington, D. C. Washington, D. C., U. S. Govt. Print. Off., Apr. 1942. 31 p. (*Its:* Publications of the Weather Research Center, v. 4, no. 1)

Contains general informal discussion relating mainly to the establishment of weather stations and air bases in various parts of the Arctic, and the weather and ice conditions existing in those areas. Regions discussed include Germania Land, East Greenland, and the Greenland inland ice; Novaya Zemlya; Pt. Barrow, Alaska; Northern Sea Route of the U.S.S.R.; arctic coasts in general; Canadian Arctic Islands; and drifting ice north of Alaska. In addition, various Soviet stations and expeditions, arctic flying routes, fogs including human and

animal fogging in extreme cold, and books on the Arctic are discussed.

Copy seen: DWB.

32604. U. S. ARMY AIR FORCES. DIRECTORATE OF WEATHER. General synopsis of dominant meteorological situations from the China Coast to the Bering Sea. Washington, D. C., U. S. Govt. Print. Off., May 1942. 9 p. 8 text maps, 2 tables. (*Its:* Publications of the Weather Research Center, v. 1, no. 4)

Includes description and data on the Sea of Okhotsk and Bering Sea. "The Sea of Okhotsk is characterized by fog in summer and ice in winter," with fog and ice in the transition months. It is the origin of the cold Oya Shio current. Ice conditions are described. The navigation season is characterized by persistent dense sea fogs. During the navigation season in the Bering Sea (end of Apr. through Sept.) turbid weather, fog, and some heavy snowfalls occur, while the winter is clear and cold. Maps show monthly temperatures; tables show precipitation and air and sea temperatures.

Copy seen: DWB.

32605. U. S. ARMY AIR FORCES. DIRECTORATE OF WEATHER. Preliminary report on climate and weather of northwestern Europe. Washington, D. C., U. S. Govt. Print. Off., June 1942. 72 p. 38 maps & charts, 31 tables. (*Its:* Publications of the Weather Research Center, v. 3, no. 1)

Contains data on climatic controls, synoptic aspects of climate, surface and upper air winds, cloudiness and ceilings, fog and visibility, icing conditions, temperature, and precipitation. Tables include several stations from northern Scandinavia and Finland, and maps show conditions over all of northwest Europe including, in some cases, the Norwegian Sea and Svalbard areas.

Copy seen: DWB.

32606. U. S. ARMY AIR FORCES. DIRECTORATE OF WEATHER. Temperature of the surface waters of the Atlantic, Ocean. Washington, D. C., U. S. Govt. Print. Off., March 1943. 49 p. 28 plates (charts), graphs, 9 tables. (*Its:* Publications, v. 6, no. 1)

Includes (p. 13-30) discussion of temperature conditions in the North Atlantic, including the Labrador Sea, southern Baffin Bay - Davis Strait, Denmark Strait, and Greenland Sea regions. Charts show distribution in Jan. and

July, of surface temperature observations and surface saline content, mean annual and mean monthly surface temperatures (0° C.), temperature anomaly of the surface water, density, water color, annual variation of temperature, and times of beginning of temperature maxima and minima.

32607. U. S. BOARD ON GEOGRAPHIC NAMES. Decisions on names in Alaska. Washington, D. C., 1952. 16 p. (*Its:* Decision list no. 5204.)

Contains 111 names approved by the Board. Unaffirmed variant names and spellings are included with references to approved version, as are former decisions no longer approved.

Copy seen: DLC.

32608. U. S. BOARD ON GEOGRAPHIC NAMES. Decisions on names in Canada. Washington, D. C., Aug. 1953. 78 p. (*Its:* Cumulative decision list no. 5304.)

Contains 1,118 decisions, with identification and location of the feature listed. Unapproved variant names and spellings are given with a reference to the approved version. Sixty to seventy percent of the names listed are in the Canadian Arctic.

Copy seen: DLC.

32609. U. S. BUREAU OF LAND MANAGEMENT. Information relative to the disposal and leasing of public lands in Alaska. Washington, D. C., U. S. Govt. Print. Off., 1953. iv, 31 p. illus., text map, 2 tables. (*Its:* Information bulletin no. 2, revised)

Contains general information on physical geography, transportation, population, living conditions, schools, health, occupations, etc.; followed by a brief survey of each section of Alaska in terms of settlement possibilities. Information is given on homesteading, trade and manufacturing sites, grazing lands, fur farming, timber, minerals, rights of way, etc., and a directory showing where more detailed information may be obtained is appended. Climatic summaries for 45 stations are included. This is a revised and up-to-date version of a 1948 bulletin (*Arctic Bibliography*, No. 18282).

Copy seen: DGS.

32610. U. S. BUREAU OF LAND MANAGEMENT. Papers presented at the seminars on Alaska, February 2, 3, 6, and 7, 1950. Washington, D. C., 1950. 105 p. Mimeographed. 2 refs.

Contains short general papers prepared by various specialists for discussions in the Dept. of the Interior designed to aid the Bureau of Land Management in understanding Alaskan resources and problems. The contributors deal with timely aspects tending to encourage further exchange of opinion, rather than attempt an inclusive technical survey of their subject. A summary and conclusions by M. Clawson and R. K. Coote and a general statement by W. E. Warne precede the papers. Subjects discussed include: (1) settlement program by H. T. Jorgenson, with discussion by H. H. Barrows; (2) agriculture, with papers on production by W. U. Fuhrman, markets by W. Calhoun, physical aspects by D. L. Irwin, agricultural development by O. S. Aamodt, and horticulture by R. Magruder; (3) forests and forest industry by R. R. Robinson, and timber and other resources in National Forests by B. F. Heintzleman; (4) "other" Alaskan resources, with papers on the natives by A. Huber, recreation by A. C. Kuehl and G. L. Collins, fish and wildlife by C. H. Baltzo, mineral resources by J. C. Reed, mining by C. H. Johnson, water power by J. M. Morgan, and a brief discussion of other developments, such as roads, railroads, air services, building and other industries, by H. R. Lee.

Copy seen: DGS.

32611. U. S. BUREAU OF RECLAMATION. Eklutna project, Alaska, to serve 25 per cent of all Alaskans. [Juneau] 1948. 10, 58, 29 p. illus., maps (1 fold.)

Contains a report (10 p.) with substantiating materials (54 p.) on a hydroelectric project to dam Eklutna Lake (61°23' N. 149°03' W.), build a power plant, and construct transmission lines to the nearby population centers of Anchorage, Matanuska valley, Fort Richardson army base and Elmendorf airfield. The report presents need for, plans and cost of the project. The substantiating materials, amply illustrated with maps, graphs, tables, etc., deal with the geography of the area; its climate, history and population; land uses, irrigation and other water uses; resources; economic needs; general plan of development.

Data are given on designs and estimates for the project, with details of local geological conditions, dam site, construction materials and problems; cost estimates, etc.; water power, potential production, and markets in the present and future. Finally recreational possibilities of the project, financial analysis, benefits, and possibilities of project extension are shown. *Appendices* (29 p.) present information from local territorial and federal agencies in support of the project.

Copy seen: DLC.

32612. U. S. BUREAU OF STANDARDS. Alaskan Eclipse expedition. (Franklin Institute. Journal, Apr. 1951. v. 251, p. 469-71)

Account of the U. S. Naval Research Laboratory's expedition to Attu Island, the most westerly of the Aleutian Islands, Alaska, to study the total eclipse of the sun by the moon on Sept. 11, 1950. Organized by Dr. John P. Hagen, N. R. L., the party of ten scientists included Grote Reber and E. A. Beck of the Central Radio Propagation Laboratory of the National Bureau of Standards. The reception and analysis of the radio-frequency energy given off by the sun during the eclipse is described. The receiving apparatus was set up about two miles from the center of the path of totality because of the inaccessibility of that location.

The eclipse, which lasted only 73 seconds, was accompanied by a severe rainstorm. However, radio waves given off by the sun are received without difficulty through rain and fog. Measurements of solar radio intensity were made at wave lengths of 3 cm., 10 cm., and 65 cm., two to four times a minute beginning about two hours before the eclipse. The sky at an azimuth of about 90° from the sun was used as zero reference. Preliminary results are given—increased apparent diameter of the sun at radio frequencies, effect of eclipse of sunspots on the observed intensity of radio frequencies, rise of apparent intensity at beginning and end of eclipse, and the occurrence of minimum intensity a few minutes after totality. **Copy seen:** DLC.

32613. U. S. COAST AND GEODETIC SURVEY. Surface water temperatures at tide stations, Pacific Coast, North and South America and Pacific Ocean islands. Washington, 1952. 59 p. tables (*Its*: Special publication no. 280, rev. ed. of U. S. Coast and Geodetic Survey TW-2.)

"Mean monthly water temperatures for each year of record (through 1951) and extremes (daily values) in °F. are tabulated for all tide stations on the Pacific Coast of North and South America and the Pacific Islands including Hawaii, the Philippines, the Aleutians, and inland coastal water stations. Readings are taken from bucket samples in the first foot or two of water below the surface, and at one time a day (not uniform) . . . Graphs showing mean and extreme monthly temperatures for 33 stations appended."—*Meteorological abstracts and bibliography*, Sept. 1953. v. 4, no. 9, p. 1078. **Copy seen:** DWB.

32614. U. S. COAST GUARD. The Coast Guard in northern waters. (U. S. Naval Institute. Proceedings. Jan. 1950. v. 76, no. 1, p. 76-85, 15 illus.)

Contains a brief text supplementing official photographs showing the work of the U. S. Coast Guard in: (1) the Bering Sea Patrol, which serves the Bering Sea and Arctic Ocean; (2) the International Ice Patrol in the North Atlantic; and (3) the International Ocean Station Program. This program operates in the North Atlantic (Denmark Strait, Davis Strait, Newfoundland area) and North Pacific (Gulf of Alaska). It carries on emergency communications, search, rescue, navigational, and meteorological services. **Copy seen:** DLC.

U. S. COAST GUARD, see also Van Ackeren, J. F. Medical officer U. S. C. G. 1953. No. 32687.

32615. U. S. CONGRESS. HOUSE. COMMITTEE ON INTERIOR AND INSULAR AFFAIRS. Amending Alaska game law. To accompany H. R. 1571. Washington, D. C., U. S. Govt. Print. Off., Apr. 22, 1953. 3 p. (U. S. 83rd Congress, 1st sess., House report no. 307) *Also pub. as:* Senate report no. 589, July 15, 1953.

Contains brief report on a bill referred to the Committee on Interior and Insular Affairs. The bill is explained, a report

from the Dept. of the Interior is presented and changes in existing law are noted.

Copy seen: DLC.

32616. U. S. CONGRESS. HOUSE. COMMITTEE ON INTERIOR AND INSULAR AFFAIRS. Report with respect to the House resolution authorizing the Committee on Interior and Insular Affairs to conduct an investigation of the Bureau of Indian Affairs, pursuant to H. res. 698 (82d Cong.). Washington, U. S. Govt. Print. Off., 1953. v. 1594, xlvii p., 157 maps. (82d Cong., 2d sess. House report no. 2503)

Contains the Bureau of Indian Affairs' report on its activities to the Congressional Subcommittee, together with supporting documents, etc. Then follows (p. 133-1594 and maps): *Compilation of the material relating to the Indians of the United States and . . . Alaska [etc.]*. This is a revision by Wm. H. Gilbert of the Legislative Reference Service, Library of Congress, of the 1950 edition, listed as *Arctic Bibliography*, No. 26915, q. v.

On Alaskan natives, the revision is mostly useful in its section on: historical, social and statistical data on tribes p. 215-718 (coordinating material scattered in the earlier edition); and in that on Alaskan native villages (p. 1371-1547) which has a (new) enumeration and summary of Indian and Eskimo tribes and bands. Some tribal documents, material on native claims, etc., are introduced. An efficient index (xlvii p.) is a new feature in this revision of a work which remains basic reference on Alaskan natives. **Copy seen:** DLC.

32617. U. S. DEPT. OF AGRICULTURE. World extremes of weather. (*In its:* Climate and man, yearbook of 1941, p. 664)

Contains the following cold weather records: lowest temperature in the world: Verkhoyansk, Siberia —90° F., Feb. 5, 7, 1892; lowest in Alaska: —78° F. at Fort Yukon, Jan. 14, 1934; greatest snowfall: 60" in one day, at Giant Forest, Cal., and greatest seasonal snowfall: 884" at Tamarack, Cal.

Copy seen: DLC.

32618. U. S. DEPT. OF DEFENSE. RESEARCH AND DEVELOPMENT BOARD. Symposium on snow removal and compaction procedures for airfields. Washington, D. C., 1952. 162 p. illus. tables incl. 1 fold. (G. G.-ES. 200/1, 24-25 April 1952) Sponsored by the

Board's Committee on Geophysics and Geography and Committee on Equipment and Supplies.

"Sufficient snow removal and compaction is required by the armed forces to maintain vehicular and airborne traffic. The present 30 min. interval in air traffic for the removal of snow or ice must be reduced to less than two min. to keep the runway operational at all times. The equipment used must be capable of satisfactory performance at air temperatures from -40° F. to $+50^{\circ}$ F. with winterization kits to be used between -40° F. and -65° F. Snow compaction must be resorted to when snow removal cannot produce a clean dry runway. The snow roller must compact loose snow up to 15 in. in thickness and produce a compacted surface capable to withstand 140,000 lb. gross weight. The roller must operate at temperatures as low as -65° F. The snow packer must compact loose snow up to six ft. in thickness into a compacted surface capable to withstand 140,000 lb. gross weight. The packer must operate at temperatures ranging from -65° F. to $+50^{\circ}$ F. The theoretical aspects of snow mechanics and physical properties of snow as they affect snow removal and snow compaction are presented. Snow removal and snow compaction equipment used by the Army, Navy, Dept. of Transport of Canada, U. S. Army Transportation Corps, and the Bureau of Public Roads are discussed."—SIPRE. Discussion includes experience at Yellowknife, Northwest Territories, Operation Highjump (Antarctic). **Copy seen:** DAI.

32619. U. S. DEPT. OF THE AIR FORCE. AIR WEATHER SERVICE. Clouds of the Aleutian Islands. Washington, D. C., Nov. 1943. n. p. all photos, maps. (*Its:* Technical report 105-28)

Contains "Aerial photographs of various cloud forms over the Aleutians with comments on cloud heights, temperature, dew point and wind, and notes to pilots regarding turbulence, poor visibility, icing and other flight hazards to be expected. Inset maps show general synoptic situation and location and topography of island in question."—*Meteorological abstracts and bibliography*, Sept. 1953. v. 4, no. 9, p. 1060.

Contains account of working conditions at U. S. Naval Petroleum Reserve no. 4 at Pt. Barrow Alaska. Problems of supply (including imported oil) and construction are noted. Pilings are set into permafrost for foundations for all permanent structures.

Copied seen: DLC.

32625. U. S. NAVY. CIVIL ENGINEER CORPS BULLETIN. Permafrost must be respected. (U. S. Navy, Civil Engineer Corps Bulletin, May 1948. v. 2, p. 123-27, illus., tables, graphs, diagrs.)

"The research area at Fairbanks is divided into three sections: (1) ground or pavement surface studies; (2) runway foundations; and (3) building foundations. Permafrost research has indicated that the design of airfields and roads must be based on the insulation and preservation of permafrost. The two accepted methods of permafrost construction are the passive method (whereby the permafrost is left intact), and the active method (whereby the permafrost is removed and the area is refilled with clean sand and gravel). The active method is feasible where the permafrost is three-five ft. thick. Terrain features and vegetation are detected by aerial reconnaissance to give clues to the presence and extent of permafrost."—SIPRE.

32626. U. S. NAVY. CIVIL ENGINEER CORPS BULLETIN. Roll with the arctic punch. (U. S. Navy Civil Engineer Corps bulletin, Dec. 1946. v. 1, no. 1, p. 2-6, illus.)

"Two general principles for construction in the Arctic are: the maintenance of equilibrium existing in permafrost soils, and building on the snow instead of in the snow. Freezing of top rollers supporting the upper portion of the treads on tractors is prevented by substituting hardwood blocks. The necessity of wearing heavy and loose clothing is indicated."—SIPRE.

Copied seen: DLC.

32627. U. S. NAVY. CIVIL ENGINEER CORPS BULLETIN. Snow-

borne tonnage. (U. S. Navy. Civil Engineer Corps bulletin, Mar. 1947. v. 1, p. 85-90, illus., table)

"Information on Alaskan freighting operations with tractor trains is presented. Operations must be halted during storms because of lack of visibility. Constant winds impede the advance preparation of freighting roads. Following ice-covered rivers or salt water ice along the shore is usually more economical than over-land travel. Obstacles encountered are sand banks, snowdrifts up to 20 ft. in thickness, and ice contraction cracks. Freighting teams used in a 300-mi. and a 75-mi. haul are described. Trails were laid out ahead of tractors and marked with flags at 0.50-mi intervals. Tons, miles and ton-miles hauled in 1946 winter freighting operations with various hauling methods are tabulated. An evaluation of the equipment used is presented. The use of the lightest oil providing adequate lubrication at operating temperatures is standard practice. Lubricants recommended are listed with specifications of use."—SIPRE.

32628. U. S. NAVY. CIVIL ENGINEER CORPS BULLETIN. Tundra's toughest where it's softest. (U. S. Navy. Civil Engineer Corps bulletin, Apr. 1947. v. 1, p. 134-37, illus.)

"The seismic exploration of Naval Petroleum Reserve no. 4 in Alaska was conducted from June-Sept. 1945 on a 24-hr./day schedule. Holes, 60 ft. deep, were dug in 30 min., at 0.25 mi. distance. Water for drilling and shooting was obtained first by melting snow and later from a water carrier and pump. Shot holes were tamped with water in summer and with quick-setting cement of plaster of paris in winter. A spudder-type drill requiring little water is recommended for freezing temperatures in place of the Failing Model 100-A rotaries. Personnel and qualifications required for arctic seismic operations are listed. The campsite and the equipment of the seismic crew are briefly described."—SIPRE.

32634. U. S. WEATHER BUREAU. Alaska and western Canada. Washington, D. C., 1952. 125 p., 17 maps, graphs, 20 tables. Mimeographed. (*Its:* Preliminary report 10.)

Climatic conditions of the region between 50°-70° N. and 110° W.-172° E. (western Mackenzie District, Yukon Territory, Alaska) are discussed, the text supplemented by detailed maps, charts, graphs, wind roses, tables of station observations, etc. Subjects discussed include climatic controls, general circulation (incl. surface and upper air winds), upper air temperatures, gales, synoptic weather, local winds, cloudiness and ceilings, visibility, fogs, icing conditions, temperature, precipitation, snowfall, and thunderstorms.

Copy seen: DWE.

32635. U. S. WEATHER BUREAU. Climatic data for airports, Canada, Greenland, Iceland, Ireland. Washington D. C. 1942. 7 p. typescript, 3 tables. (*Its:* Preliminary report 24)

Contains tables of climatic data assembled by the Weather Bureau for the Weather Research Center (later termed: Directorate of Weather) of the U. S. Army Air Corps. Tables include lat. and long. of the airport and nearest weather station, prevailing wind direction, total precipitation and snowfall, temperature, and fog data. Arctic stations include: seven in the Yukon; Goose Bay, Labrador; Ft. Chimo, northern Quebec; Søndre Strømfjord (Blue West 8) and Narssarsuaq (Blue West 1), West Greenland.

Copy seen: DWE.

32636. U. S. WEATHER BUREAU. Climatological summary, Eureka, N. W. T., Canada. Washington, D. C., 1951. 72 p. 34 tables

"Surface and upper air data presented. Upper wind measurements, July 1947–Dec. 1950, summarized to show frequency of wind directions by speed groups for each month at 1, 3, 6, 9 and 12 km." —*Meteorological abstracts & bibliography*, May 1953. v. 4, no. 5, p. 648. Eureka is weather station on Ellesmere Island, 80°13' N. 86°11' W. **Copy seen:** DWB.

32637. U. S. WEATHER BUREAU. Climatological summary, Resolute, N. W. T., Canada. Washington, D. C., 1951. 62 p. 34 tables

"Surface and upper air data presented for Oct./Nov. 1947–Dec. 1950. Upper wind data summarized to show frequency of directions by speed groups for each month at 1, 3, 6, 9 and 12 km." —*Meteorological abstracts & bibliography*, May 1953. v. 4, no. 5, p. 648. Resolute is weather station on Cornwallis Island, 74°41' N. 94°55' W. **Copy seen:** DWB.

32638. U. S. WEATHER BUREAU. Climatological summary: Thule, Greenland. Washington, D. C., 1950. 38 p. illus. tables.

Contains a brief description and history of the station and tables of observations made during a period of three years. The station was established in 1946 as a joint U. S.-Danish operation at 76°33' N. 68°49' W. in Wolstenholme Sound, north of Cape York. Its duties and equipment are described, and its two satellite weather stations, Eureka and Alert on Ellesmere Island, are noted. A local Danish weather station in Thule village collects data from four U. S.-Canadian arctic stations for relay to southern Greenland. The greater part of the report consists of detailed tables of data from surface and upper air observations made from Oct. 1946 through Dec. 1949: (1) summarized surface data; (2) daily surface data; (3) summarized upper air data. **Copy seen:** CaMAI.

32639. U. S. WEATHER BUREAU. North Pacific Ocean and adjacent areas. Washington, D. C., 1942. 165 p. graphs, charts, tables. (*Its:* Preliminary report 39)

Includes data on Alaska (interior, southern coast, Aleutians), Bering Sea, northeastern Siberia, Kamchatka, and Sea of Okhotsk. Precipitation, cloudiness, frequency of low visibilities, areas

of fog and low stratus, upper air winds, frequency of gales, etc. are discussed in turn, the text supplemented by detailed charts, graphs, wind roses, and tables. A table of station localities with lat. and long. is given. **Copy seen:** DWB.

32640. U. S. WEATHER BUREAU. Wing icing conditions throughout the world. Washington, D. C., 1942? 14 p. typescript, graphs, 15 charts, table. (*Its:* Preliminary report 35) 16 refs.

General information on icing includes a discussion of the relationship of temperature to icing, size of water droplets, and types of ice (*i. e.* rime, glaze, frost) and their manner of formation. The meteorology of icing is discussed with sections on icing in warm and cold fronts and in various types of cloud; the use of de-icing equipment is noted. World maps show the 0° and 32° F. isotherm at the earth's surface and at 5,000 and 10,000 ft. for Jan., Apr., July, Oct., and tracks of cyclones in the arctic area for Feb.–Nov. in specific years between 1931 and 1937. **Copy seen:** DWB.

32641. U. S. WEATHER BUREAU. STATISTICS DIVISION. Air routes, Alaska to Siberia. Washington, 1942. 99 p. charts, tables. (*Its:* Preliminary report, no. 23)

"Climatic conditions along two routes across the North Pacific from Alaska to Siberia discussed. From the meteorological standpoint alone, the northern route (from Fairbanks to Nikolaevsk via Nome and Okhotsk) appears to have a marked advantage over the southern route (from Kodiak to Khabarovsk via Petropavlovsk and Tokyo) in colder months of the year and a slight advantage in summer. Disadvantages of the southern route are continuous succession of cyclonic depressions and a high percentage of dense fogs. Northern route, while encountering extremely low temperatures in winter, is preferable because of the larger percentage of clear skies. Winds variable over both." —*Meteorological abstracts and bibliography*, Sept. 1953. v. 4, no. 9, p. 1059.

32643. UOTILA, TOIVO EMIL, 1897-1947. Syrjäänin š:n, ž:n, d'ž:n vastineet venäjän syrjäänilaisissa lainoissa. (Virittäjä, 1944. v. 48, no. 4, p. 422-25) **Title tr.:** Zyryan sounds š, ž, dž in the loanwords from Russian.

Contains a linguistic discussion of changes of certain sounds in Russian words adapted by Zyryans. Summary in German p. 470-71. **Copy seen:** DLC.

32644. UPRUS, V., and others. Vasodilatation and vasoconstriction in response to warming and cooling the body. A criticism of methods. (Clinical science, 1936. v. 2, p. 301-316, 8 diagr.) 5 refs. *Other authors:* J. B. Gaylor, and E. A. Carmichael.

Contains an account of skin temperatures of various areas of the body as indicators of vasoconstriction and vasodilatation, supplemented with readings of rectal temperature. Vasodilatation was produced by warm air, or by immersing limbs alternately in cold and warm water. Time of onset of vasodilatation depended on the local temperature of the limb, its posture and the rapidity of rise of blood temperature.

Contains a discussion based on 50 cases and on literature, of the possible etiological factors of hypersensitivity to cold; also a description of a case of urticaria caused by cold air; only parts usually exposed to air (face, hands) were affected; in the patient's family (of 28 individuals in four generations) 17 such cases oc-

curred; in all cases the symptoms were evident from birth. **Copy seen:** DLC.

32646. URSYNOVICH, S. L. Shamanka v dome gubernatora. (Sovetskaja Aziä, 1926. god 2, no. 2, p. 79-80) **Title tr.:** A shamaness in the house of a governor.

Contains excerpts from a document written in the mid-18th century: a Tungus shamaness was called to read the future for some Russian officials including the governor of Irkutsk. The Orthodox clergy accused them of superstitious practices. **Copy seen:** DLC.

32647. URVANTSEV, NIKOLAI NIKOLAEVICH. K geologii Severnoi Zemli. (Razvedka nedr, 1932. no. 9-12, illus. incl. map) **Title tr.:** On the geology of Severnaya Zemlya.

Contains a general description of the region, location of the main islands, relief stratigraphy, tectonics and glaciation. The article represents a short preliminary report of G. P. Ushakov's expedition to Severnaya Zemlya 1930-1931. For the latter's narrative see *Arctic Bibliography*, No. 26995. **Copy seen:** DLC.

32648. URVANTSEV, NIKOLAI NIKOLAEVICH. Noril'skoe kamlenno-ugol'noe mestorozhdenie. Moskva-Leningrad, Geolog. izd-vo, 1931. 68 p. plates 1-4, maps 5-9. (U.S.S.R. Glavnoe Geologo-razvedochnoe upravlenie V.S.N.KH. Trudy, vyp. 95) **Title tr.:** The Noril'sk coal deposits.

Contains the results of a study of Noril'sk coal deposits near the mouth of the Yenisey River (69°19'38" N. and 88°8'5" E.), carried out in 1919-21. Data are given on the geographic position and limits of the deposits. The history of exploration, topographical and geological surveys of the region (map no. 6) are outlined. The deposits (profiles), characteristics of the sedimentary deposits and their age, tectonics, and coal seams (map no. 4) are described, with estimate of resources. Peculiar conditions of work in Noril'sk are discussed: climate, permafrost, transportation, etc. Summary in English, p. 62-68.

Contains a general account of the Taymyr Expedition of the Geological

Committee of the U.S.S.R. in 1929, for the study of geology of the Byrranga Mts. region (72°-76° N. 92°-112° E.) in the northern part of the Taymyr Peninsula. Data are given on the orography, hydrography (Taymyr River and Lake system) and geological structure of the explored region. Traces of submergence and extensive glaciation are noted. *Map* of the Taymyr basin (scale 1:1,000,000), a geological map of the lower Taymyr River (1:400,000), and a general geological and topographical map of the Turukhansk region (scale 1:2,000,000); are included. Summary in English, p. 40-43.

32654. USHAKOV, G. A. Po nekhozhenoi zemle. (Nauka i zhizn', May 1953. t. 20, no. 5, p. 40-43, illus.) **Title tr.:** On untrodden land.

Popular account of author's expedition to Severnaya Zemlya in 1930-32: its exploration trips which covered 7,000 km. and resulted in mapping 37,000 sq. km. of land; plan of the expedition, base on Domashniy Island, the two winterings and trips (mostly by dogsled) to Pioneer, Komsomolets, Oktyabr'skoy Revolyutsii and Bol'shevik Islands are briefly described. The party was transported to Severnaya Zemlya by the *Sedov* and brought home by the *Rusanov*. Cf. author's book of the same title, *Arctic Bibliography*, No. 26995.

Contains a systematic list of 35 species

of marine organisms, inhabiting the Sea of Okhotsk at a depth of 3000 m. or more, based on collections of Russian expeditions since 1932, and on data from the voyage of the U. S. Fisheries research vessel *Albatross* in 1906. Comparison is made with the deep-sea fauna of the northern Pacific Ocean.

32662. USHER, JOHN L. Brown coal in the Labrador trough. (Geological Society of America. Bulletin, Dec. 1953. v. 64, no. 12, pt. 2, p. 1485)

Contains abstract of a paper presented at the Nov. 1953 meeting of the Society,

Toronto, Canada. During 1952 drilling operations in the Labrador concession of the Iron Ore Company of Canada, brown coal, probably of Upper Mesozoic or Tertiary age, was found below 150 feet. Its relation to the iron ore above and below is uncertain; if folded or faulted into the iron, late Mesozoic or Cenozoic tectonism may be indicated.

Copy seen: DGS.

32663. USOLTSEVA, E. V. Oslozheniia v techenii ran pri tsynge. (Khirurgiia, 1945, no. 6, p. 13-18) **Title tr.:** Complications of the course of wounds in scurvy.

Contains an account of complications of wounds due to scurvy, observed in a high percentage of the injured in Feb. 1942, during the siege of Leningrad. An acute and chronic form of the syndrome ("wound scurvy") is described and recurrence and prognosis discussed. Local therapy without general vitamin treatment, was without results. Several case histories are presented. Abstracted by I. Aird in *Bulletin of war medicine*, Aug. 1946, v. 6, no. 12, p. 502-503.

32670A. V-FIVE ASSOCIATION OF AMERICA. How to survive on land and sea; individual survival. Rev. ed. Annapolis, Md., U. S. Naval Institute, 1951. xviii, 340 p. illus., plates, fold. map, fold. diagr. Revised edition of Naval Aviation V-5 Physical Training manual, pub. 1943. Introduction signed by John J. Craighead and Frank C. Craighead for the Revision Committee.

Contains a comprehensive manual on ways and means of survival under unusual conditions. Consecutive chapters deal with: survival hints; orientation and traveling; finding water; wild plant food; wild animal food; firemaking and cooking; shelter, including snow shelters (p. 125-27); survival in special areas including the far North (p. 173-82); environmental hazards, with notes on snow blindness (p. 185) and effects of cold (p. 187) *Appendix* (p. 223-323) presents an outline of the U. S. Naval Aviation Training Program which includes a section on "Polar and subpolar survival" (p. 307-319): keeping warm with clothing, fire, shelter; the sleeping bag; dangers of cold, etc. A glossary, selected bibliography and index are appended.

32683. VALLE, KAARLO JOHANNES, 1887- . Suurperhoset IV. Mittarit. Helsinki, Werner Söderström osakeyhtiö, 1946. 370 p., 32 illus., 22 plates, text map. (Suomalainen eläin- ja kasvitieteellinen seura Vanamo. Suomen eläimet, 5) 22 refs. **Title tr.:** Macrolepidoptera IV. Geometridae.

Contains a survey of the families Brevitidae (two species) and Geometridae; tables for the determination of subfamilies, genera and species (imagines and larvae); and descriptions of about 250 geometrids and their larvae (measuring worms) and pupae. Data are given on plants on which the caterpillars feed. Geographic distribution in Finland is noted. Nineteen species added to pt. I-III (*supra*) are listed with descriptions (p. 337-53). Index of Latin and Finnish names is appended. Many species native to northern regions of Finland are included. **Copy seen:** MH-Z.

32684. VALLE, OTTO. Agriculture. (*In:* Geografiska Sällskapet i Finland. Suomi, a general handbook on the geography of Finland, *pub.* in Fennia, 1952. v. 72, p. 448-73, 14 text maps, 4 tables)

Agricultural conditions vary greatly from north to south in Finland. Length of tillage season averages 120 days and length of grazing season 90-100 days in the northern as opposed to 190-220 and 140-150 respectively in the southern part of the country. Climatic factors, utilization of farmland, ownership and size of farms, cultivated crops, and animal husbandry are discussed with comparisons between far northern and southern areas. *Maps* show percentage of field and meadow areas, northern limits of cereals and field plants, shifting of northern limits of timothy, winter and spring wheat in recent decades, and potato crop areas. **Copy seen:** DGS.

32689. VAN DER ELST, R. Climatopsychologie. (In: Piéry, M., ed. Traité de climatologie biologique et médicale. Paris, 1934. t. 1, p. 546-55) **Title tr.:** Climatopsychology.

Contains a study on the direct and indirect effects of climate on human psychology. Of the indirect ways, the effects—including that of cold—on the blood and on the nervous system are analyzed; the direct effect of climate on the human psyche, though more problematic, is also discussed. Extensive references are made to the literature.

32689A. VAN DER HORCK, ALEXANDER HUMBOLDT. Ueber die Lappländer. (Berliner Gesellschaft für Anthropologie, Ethnologie und Urgeschichte. Verhandlungen, Jan. 19, 1876, p. 26-39, text table, fold. table, plate ix) **Title tr.:** On the Lapps.

Contains an account of Lapps on the arctic coast of Lapland, where the writer visited in 1875 to make zoological and anthropological investigations (dates and places are not specified). Physical and cultural characteristics of the mountain, fisher and Skolt Lapps are given. The last group show racial influence from the Russians, and the first two groups are anthropologically of the same stock. Summarized anthropological characteristics are given for all three groups; and anthropometric data on 35 persons are presented in tabular form. The author also collected skulls from graves, made photographs, took face and ear masks in gypsum, and made casts of teeth. Burial customs and objects found in graves,

fishing and reindeer breeding, dwellings and clothing, food and health conditions are noted.

32692. VAN SICKLE, NORMAN E. Realistic sewerage program for Alaska. (Pacific builder and engineer, May 1952. v. 58, p. 68-69, illus.)

"Military projects in Alaska regarding sewage disposal fall into three categories; namely, installations on tidewater, small

interior installations, and large interior installations. It is planned to provide some kind of primary treatment for every installation. The first 500 ft. of the outfall sewer for small installations is located within a utilidor. It contains a two inch steam line to prevent freezing of the sewage in the utilidor, the septic tank, and the effluent line, and to provide heat for promoting anaerobic decomposition. Problems of the large interior installation at Ladd Air Force Base include utilidor drainage, temperatures, and the dispersing and mixing action of force mains and comminutors. The problem of sludge disposal is briefly discussed"—SIPRE. **Copy seen:** DLC.

32693. VAN STONE, JAMES W. Carved human figures from St. Lawrence Island, Alaska. (Alaska. University. Anthropological papers, 1953. v. 2, no. 1, p. 19-25, 4 plates) 21 refs.

From a large collection of these contemporary wood and ivory carvings in the University of Alaska Museum, mostly obtained by O. Geist in 1926 and 1927, some 40 representative figures are selected. These are grouped (six groups) on basis of style, described and illustrated, also compared with figures from other areas. Those of the first group, naturalistic figures of wood with clear bodily details, strongly resemble carvings of the Koryaks and Angmagssalik Eskimos. Those of another group, bird figures with human heads, are widely spread throughout the Eskimo area. Although the great majority of Eskimo carvings in human form are crude and stylized, there have been attempts in widely separated areas to portray the human figure naturalistically and in active poses. "As far as St. Lawrence Island is concerned, this naturalistic tendency . . . seems to represent an elaboration of techniques more common to the people of northeast Asia, from whence it spread to the island in fairly recent times" (p. 24).

Contains ethnographical description of peoples living in Finland: their languages and dialectal boundaries, customs and ethics. The Lapps are dealt with (p. 77-109): formerly distributed into southern Finland, later pushed to the North or assimilated by Finns, they remain as pure Lapps only in the three northernmost parishes of Utsjoki, Inari, and Enontekiö. Origin of their name "Lappi, Lappalaiset" is discussed, and their religion, ethics and educational situation sketched. The principal Finnish dialects are described (tables give a comparative survey), customs, ethics, beliefs and superstitions of Finns are outlined. The minorities (Russians, Swedes and others) are briefly characterized.

32696. VARSANOF'EVA, VERA ALEKSANDROVNA, 1890-. Geograficheskii ocherk basselna r. Un'i. (Sovetskaiia Aziia, 1929. v. 5, no. 1, p. 77-109; no. 4, p. 90-106, illus.) *Title tr.*: Geographical outline of the Un'ya River basin.

Contains geographical, geological and ethnographical observations made in 1927-28, while author was doing geological survey and mapping of the Un'ya River basin, left tributary of the Pechora at 61° 45' N. 58° 26' E. A panoramic geomorphological description is given of the banks and valley of the Un'ya from its confluence with the Pechora to its sources in the Ural. Its tributaries (the

Berdysk, Vorotyatnaya, Kysun'ya, and others) and populated places of the basin are noted. The Voguls, who winter in the basin of Sos'va River, and spend the summer season in the Ural Mts. herding reindeer, are discussed: their tents and clothing, their work, the status of women, getting a bride (price paid), religion and idols (*pupu*), sacrifice of horses, bear ceremonies, dances of men and women, etc. (no. 4, p. 97-102). Author's ethnographical observations were challenged by D. T. Ianovich, q. v. *Copy seen:* DLC.

Contains a geographical description of the River Ilych which rises at approximately 63° 35' N. 58° 30' E., flows about 450 versts into the upper Pechora, as its first larger right tributary. The inhabitants along the Ilych are Zyryans, who keep cattle and sheep, cultivate meadows, also do hunting and fishing. In summer Ostyaks with their reindeer herds come from the basin of Sos'va River to the Ural. Villages and rock formations along the course of the Ilych are described. The author made these observations during 1921-24, while a participant in A. A. Chernov's geological investigations carried out in connection with the Northern Scientific Economic Expedition of 1920-26. *Copy seen:* DLC.

Copy seen: DSI.

32707. VASILEVICH GLAFIRA MAKAR'EVNA, 1895- . Drevnelshie iazykovye svyazi sovremennykh narodov Azii i Evropy. (Akademiâ nauk SSSR. Institut étnografi. Trudy, novaiâ seriâ, 1947. t. 2, p. 205-232) 35 refs. **Title tr.:** The most ancient linguistic connections between the contemporary peoples of Asia and Europe.

A linguistic paper (excerpt from a larger work) on the Tungusian language and the ethnic origin of the Tungus, based on material collected by the author during some twenty years. Ten groups of word roots in Tungus are investigated and compared with other Paleo-Siberian and Ural-Altaic languages. Words for "men, people, kin," for "reindeer" and "ox," for "shaman" and his actions, for sorcery, divination and acts of worship, and many others are discussed. Frequent quotation from the works of N. I. A. Marr who laid much emphasis on the Yaphetite languages. The root *dîa* chan for an ethnonym (man speaking foreign language), concludes the author, belongs to the oldest linguistic layer in many of the contemporary languages in Eurasia.

Copy seen: DLC.

32708. VASILEVICH, GLAFIRA MAKAR'EVNA, 1895- . Évenkiïsko-russkii (tungussko-russkii) slovar'. Otvetsvennyi red. N. N. Poppe. Moskva, Gos. izd-vo inostrannykh i natsional'nykh slovarêi, 1940. 208 p. **Title tr.:** Évenki-Russian: Tungus-Russian dictionary. Editor N. N. Poppe.

Contains about 10,000 words for practical use. An attempt was made to create a Tungusian literary language, based on one of the southern dialects (*sekai*) spoken in the Katonga and Évenki national districts, supplemented by some material from other dialects. All printed literature in the Tungusian

language up to 1938 was explored, also previously printed vocabularies and lists of words noted down by several travelers, as well as material recorded by the author himself. In 1930 the native term "Évenki" was officially adopted in place of Tungus, and the language has been enriched by many cultural words, mostly adopted from the Russians. This dictionary gives insight into the entire life of a hunting and reindeer-breeding people. Their language belongs to the Tungus-Manchu group. An introduction to the dictionary briefly stresses four typical features of the Tungusian language: the agglutination, the extensive use of suffixes for nouns and verbs, the absence of grammatical categories (the same word may serve as noun, adjective or verb, depending on its position in the sentence), and the absence of grammatical genders. This work was complemented later by author's Russian-Tungus dictionary, *Arctic Bibliography*, No. 27065.

Copy seen: DLC.

32709. VASILEVICH, GLAFIRA MAKAR'EVNA, 1895- . Fol'klornye materialy i plemennoi sostav évenkov (tungusov). (In: Vsesoiuznyi geografi-cheskii s"ezd. 2nd, Leningrad, 1947. Trudy, 1949, t. 3, p. 355-64) 19 refs. **Title tr.:** The folkloristic materials and the tribal organization of the Évenki (Tungus).

Contains accounts of certain tribes, Changit, Chulugby, and Mangi, as they are depicted in Tungus folklore. They are attributed with fantastic characteristics; Changits were cannibals, Chulugbys had only one hand, one leg and one eye, the Mangis were giants, etc. It seems probable, however, that the folk traditions in this case refer not to some strange people, but merely to other tribes of the Tungus themselves.

32714. VASMER, MAX. Beiträge zur historischen Völkerkunde Osteuropas, IV. Die ehemalige Ausbreitung der Lappen und Permian in Nordrussland. (Akademie der Wissenschaften, Berlin. Philosophisch-historische Klasse. Sitzungsberichte, 1936. no. 20, p. 176-270, fold. map) 50 refs. **Title tr.:** Contributions to the historical ethnology of East Europe, IV. The former extension of Lapps and Permians in northern Russia.

Contains a study tracing the former and present territory inhabited by Lapps and Permians (Zyryans), chiefly based on linguistic investigations of place names and loan words. Previous investigations are reviewed and bibliography given. Formerly the Lapps were more

widely extended in northern Russia: in the governments of Arkhangel'sk, Olenetsk, Novgorod and (partly) Petersburg (see map). They were being pushed back by Karelians and other western Finnish tribes, even before the coming of the Russians. The Zyryans formerly lived much further to the west; in the north, traces of them in place names survive in the districts of Kholmogory, Arkhangel'sk and Onega where they met Lapps; Permians reached west to Lake Onega and Belozero, southwest to Vologda, and south to Kostroma and Kazan'. The Norsemen met Permians (Barmians) on the White Sea and at the mouth of Severnaya Dvina in the 9th century.

32718. VEDERNIKOV, V. A. Dermatomikozy v Arkhangel'skoĭ oblasti. (Vestnik venerologii i dermatologii, Mar.-Apr. 1952, no. 2, p. 51) **Title tr.:** Dermatomycoses in the Arkhangel'sk Oblast'.

Contains summary of an account on the frequency (expressed in per cent) of skin fungi in 1936-39 and since 1946, based on observations of cultures. Some clinical data and means of combatting dermatomycoses, employed since 1946, are also discussed. **Copy seen:** DSG.

32719. VEGARD, LARS, 1880- . An auroral spectrogram obtained at Oslo on February 23. (Nature, June 24, 1950. v. 165, no. 4208, p. 1012-13, illus., table)

Contains a description and analysis of a spectrogram covering the region between ca. 3900 and 6300 Å. of a quite brilliant aurora observed during the night of Feb. 23-24, 1950. The study indicates that molecules and atoms of oxygen and nitrogen are present in the ionosphere in the neutral and ionized state.

Copy seen: DSG.

32720. VEGARD, LARS, 1880- . Continued investigations on the spectra of aurora and twilight and the ionospheric temperature. Oslo, 1951. 16 p., plate, graphs, 9 tables. (Geofysiske publikasjoner, v. 18, no. 4) 14 refs. **Other authors:** E. Tønsberg, and G. Kvifte.

Contains the results of auroral and twilight spectrograms taken at the Auroral Observatory, Tromsø (69° 39' 8" N. lat.) during 1942-48. The tabulated results comprise spectrograms (of long exposure) taken for spectral analysis to detect and measure weak lines, and to obtain the negative nitrogen bands with measurable dispersion and density for

determination of the ionospheric temperature at different altitudes of a sunlit atmosphere. Suitable spectrograms were taken for the study of variations of spectral intensity distribution, for determination of the screening height, radiation (causing excitation of the yellow sodium line), and of the upper limit of the sodium layer. The instrumental methods are described. The basic formula for determining the temperature of the nitrogen bands is given. Vegard's method for determination of the thickness of the sodium layer is explained.

32721. VEGARD, LARS, 1880- . Doppler displacement of auroral hydrogen lines and its bearing on the theory of aurora and magnetic disturbances. Oslo, 1952. 15 p. graphs, 4 tables. (Geofysiske publikasjoner, v. 18, no. 5) 39 refs.

Contains a detailed analysis of the Doppler displacement of H β on the auroral spectrograms (Tromsø) from 1940-41. Photometer curves were taken of the spectrograms and smoothed curves produced, from which is seen that H-atoms are moving in all directions. Tabulated results of atmospheric absorption of electron rays and protons are given. It is concluded that the theory by Birkeland and Størmer is applicable to the neutralized ray bundle composed of electrons and protons. A brief account of phenomena explained by the neutralized bundle is given.

32722. VEGARD, LARS, 1880- . Enhancement of auroral hydrogen lines toward lower latitudes. (Nature, Dec. 27, 1952. v. 170, no. 4339, p. 1120-21) 10 refs.

Observations made in Oslo and Tromsø for a number of years show a considerable increase of the relative intensity of auroral hydrogen lines towards lower latitude. This is claimed to demonstrate the correctness of the author's early hypothesis on the genesis of auroras and magnetic disturbances.

Copy seen: DSG.

32723. VEGARD, LARS, 1880- . Great intensity variations of H α and effects in auroral spectrograms taken in rapid succession. (Nature, London, Sept. 27, 1952. v. 170, no. 4326, p. 536-37, illus.) 12 refs.

"Four spectrograms taken at Tromsø [Norway, 69°40' N. 18°58' E.] Dec. 3,

1951, are reproduced and discussed. Two show hydrogen lines, two do not. This is discussed in terms of energy and neutralization of solar protons."—*Meteorological abstracts and bibliography*, Feb. 1953. v. 4, no. 2, p. 184-85.

Copy seen: DLC; DWB.

32724. VEGARD, LARS, 1880-, and **E. TONBERG**. Results from Auroral spectrograms obtained at Tromsø during the winter 1950-51. Oslo, 1952. 20 p. illus., incl. 3 plates, 3 tables. (Geofysiske publikasjoner, v. 18, no. 8) 28 refs.

Contains a table comparing wave lengths previously measured with those from more recent spectrograms obtained at the Auroral Observatory at Tromsø in 1950. The Doppler displacement of auroral hydrogen lines and measurements of ionosphere temperature are discussed, and spectrograms obtained at Tromsø during winter 1950-51 are reproduced.—*From Meteorological abstracts and bibliography*, Oct. 1953. v. 4, no. 10, p. 1160.

32725. VELDKAMP, A. L. Enkele beschouwingen over ernstige ondertemperaturen bij zuiglingen. (Maandschrift voor kindergeneeskunde, Jan. 1948. v. 16, no. 1, p. 23-28) 16 refs. **Title tr.:** Some observations on severe hypothermia in infants.

Severe hypothermia (below 30° C.) was occasionally observed in infants not in the wintertime. Its symptoms and results of histological post-mortem examinations are presented, and the physiology of hypothermia due to cold exposure outlined. Rewarming is recommended as therapeutic method. Text in Dutch, summaries in English and French. An abstract of this paper appeared in: *American Journal of diseases of children* 1950. v. 80, no. 5, p. 850-51.

Copy seen: DSG.

32726. VELICHKO, E. God na "belom piatne" Taymyra. (Geografiia v shkole, 1948. no. 6, p. 29-35, illus.) **Title tr.:** The year on a "white spot" of the Taymyr.

Contains a description of a typical expedition for exploration of Taymyr Peninsula: the changing seasons and

their influence on vegetation and animal life, the aid afforded explorers by aerial surveying are noted. Some species of birds and animals are mentioned. The brief period of field work is stressed: two months is the length of summer on the Taymyr.

En undersøgelse over Thule-distriktets marine fauna med særligt henblik paa havpattedyrenes biologi. (Naturhistorisk tidende, 1947. aarg. 11, nr. 1, p. 6-8, illus.) **Title tr.:** An investigation of the marine fauna of the Thule district with particular consideration to the biology of marine mammals.

Contains analysis of the stomach content of a walrus, which shows that it feeds on the crustaceans *Cardium groenlandicum* and *C. ciliatum* to depths of 45 m., and from 48-80 m. on *Mya truncata* and *Saxicava arctica*. A quantitative investigation of the bottom fauna revealed a typical *Macoma calcaria* society of which crustaceans are a component. In a single meal the walrus eats clean an area of 200 sq. m. Food of the seal, narwhal, beluga are also noted. The marine fauna off the coast around Thule is qualitatively and quantitatively richer than that at corresponding latitudes on the east coast of Greenland.

"The Kotlas-Vorkuta railroad in Komi and Arkhangel'sk (61° N. 46' E.-68° N. 64° E.) traverses three types of terrain: continuous forest (970 km.), forest-tundra (130 km.) and tundra over permafrost (119 km.). Transportation difficulties due to snow drifts and frost action along the roadbed are of minor significance in the forest and forest-tundra belts. Long winters, permafrost, lack of forests, and poor drainage create maintenance problems in the tundra belt. A proposed program of snow fencing and drainage installations along the roadbed is described."—SIPRE. **Copy seen:** DLC.

(Nature,
pt. 2, p.
results of

Contains a summary of the work of the four-man party under Papanin which drifted on an ice-floe "North Pole" from the vicinity of the Pole to approx. 71° N. 20' E. May 1937-Feb. 1938. "The movement of the polar ice layer was found to accelerate progressively with distance from the Pole, at an average daily advance of 4.4 km. from the pole to 85° N., 7.5 km. from 85°-80° N., and increasing to 20 km. at lower latitudes. The drift is caused by wind action combined with the southward displacement of the ice crust at an average speed of 2 km./day near the Pole, increasing to 10-12 km./day between the 70th and 75th parallels. The effect of earth rotation inclines this movement 40° to the right of the resultant geometrical direction. Other studies were concerned with ocean currents, depths, bottom configuration, temperature, and with the measurement of magnetic and meteorological elements."—SIPRE.

32742. VILKUNAA, KUSTAA. Suomalais-ugrilanen kansatiede tietään etsimässä. (Virittäjä, 1950, v. 54, no. 4, p. 373-84) **Title tr.:** Finno-Ugric ethnography in search of its way.

Contains author's theoretical premises for ethnographic work: to study the independent cultural phenomena and those conditioned by circumstances; the evolutionary and typological method is inapplicable; all cultures are of international character, the migration of cultural traits is obvious, and a distinct Finno-Ugric culture does not exist. The principal tasks of ethnography are to explain how the Finns elaborated the common heritage, how it was made congruous with their character and the nature of their country, and how a certain cultural phenomenon was shaped. The search for the "origin" or "genus" of a certain culture should be rejected. Summary in German, p. 478-79.

Contains description of a specimen from a dike on Kap Daussey, southwest of Scoresby Sund, in the Tertiary coastal dike swarm of East Greenland. The dike and residual glass are described in detail, with diagrams and tables showing chemical analyses and comparison with similar rocks in Great Britain, Virginia, Madagascar, Borneo, and Java. The crystallization sequence of the dike magma is discussed. **Copy seen:** DGS.

32745. VINCENT, EWART ALBERT. Hornblende-lamprophyre dykes of basaltic parentage from the Skaergaard area, East Greenland. (Geological Society of London. Quarterly journal, 1953. v. 109, pt. 1, no. 433, p. 21-49, illus. incl. plate, 2 sketch maps, diags., 5 tables) 19 refs.

Contains results of a petrological examination of 40 rock specimens forming a complete sample of Tertiary dikes on the Skaergaard Peninsula, eastern side of outer Kangerdlugssuaq Fjord. The specimens were collected during the British East Greenland Expedition, 1935-36. The composition of the specimens is described, chemical analyses given, and the genetic sequence traced through three rock types which probably originated from the same parental basic magma. Genesis of the rock types may be explained in terms of filter press action and fractional crystallization.

Contains a note on eye irritation among 25 railway workers engaged in removal of

pitch and snow from a railway line. Failure to protect the eyes with goggles, is blamed for the accident.

Copy seen: DSG.

32755. VIRCHOW, RUDOLF, 1821-1902. Die altnordische Schädel zu Kopenhagen, beschrieben und in ihren Beziehungen zu anderen Schädeln des Nordens erläutert. (Archiv für Anthropologie, 1870. Bd. 4, p. 55-91, incl. 7 text tables) *Title tr.*: The old Nordic skulls in Copenhagen described, and their connections with other skulls of the North explained.

Includes (p. 74-79) measurements and remarks on five Lapp, five Eskimo (from Umanak, West Greenland, about 71-72° N.), and three Finnish skulls, studied by the writer at the Anatomical Museum at Copenhagen in 1869. The small and round Lapp skulls apparently show traces of degeneration, caused by poor nutrition and perhaps rachitis; the strong jaw bones of the Eskimos probably were developed under stress of masticating an exclusively animal diet; and the Finnish skulls show influence of the Lappish race.

32757. VIRCHOW, RUDOLF, 1821-1902. Die physischen Eigenschaften der Lappen. (Berliner Gesellschaft für Anthropologie, Ethnologie und Urgeschichte. Verhandlungen, Feb. 20, 1875, p. 7-15, plate iv) *Title tr.*: Physical peculiarities of the Lapps.

Contains anthropological characteristics of seven Lapps (including four women) from Malå in Sweden (approx. 65° N. 36° E.), brought to Berlin in 1875. The color of their hair and eyes (dark brown, not black), small stature, brachycephalic skull, form of face, eye socket and nose are described (with measurements). Possibility of degeneration because of unfavorable climate and

bad nutrition is stressed. Includes remarks by Steinthal and Virchow's answer.

32765. VIZE, VLADIMIR ŪL'EVICIĬ, 1886-1954. Arktika i Afrika. (Znanie-sila, July 1950. t. 20, no. 7, p. 9) **Title tr.:** Arctica and Africa.

Observations of the last 52 years indicate a relationship between the water level of African lakes (Victoria, Nyassa) and the ice conditions in Barents and other arctic seas. The high level of African lakes coincides with a low amount of ice in arctic seas, and vice versa. This coincidence is explained by variations of atmospheric circulation, as the years with intensive circulation are rainy in Africa and mild in the Arctic, and the years of weak circulation are arid in Africa and cold in the Arctic.

32781. VOIPIO, PAAVO. The hepaticus variety and the juvenile plumage types of the cuckoo. (Ornis fennica, 1953. Arg. 30, no. 4, p. 97-117, illus.)

Contains a study of polymorphism of the cuckoo, previously regarded as a good species (*Cuculus hepaticus*-*C. rufus*) but later recognized as variety of the common grey-backed cuckoo. Color phases of the female are described (the polymorphism occurs only in the female), also the types occurring in young birds. Data are given on color phases and sex, and on color phases and ecological balance. Polymorphism of the female cuckoo is concluded to represent a case of balanced polymorphism and to have a simple genetic basis. The study is partially based on material from Finnish Lapland.

32786. VONDER AHE, KARL L. Operating problems in oil exploration in the Arctic. (Petroleum engineer, Feb. 1953. v. 25, no. 2, p. B12, B14, B16-B18, illus. graph)

"Problems posed by permafrost at the Naval Petroleum Reserve no. 4 (Alaska) include transportation difficulties, the thawing of foundation footings due to heat transfer from drilling and circulating hot mud, the difficult setting of concrete, and the collapse of casings through ice expansion. Thawing of foundations is avoided by setting the conductor pipe at 100 ft. depth and jacketing the top 60 ft. with a larger size pipe leaving two-three in. of dead air space. Concreting in sub-zero temperatures requires covering and heating the dry cement to 20° F., water to 100°-120° F. and admixing four percent CaCl₂. Collapse of casing and surface may result from expanding freezing mud between casing and formation. Counter-measures suggested include the replacement of the fluid with cement, lowering of the f. p. of the mud by adding NaCl, or removal of the mud and filling of the annulus with oil."—SIPRE.

(Schweizerische Gesellschaft für Anthropologie und Ethnologie. Bulletin, 1934/35, pub. 1935. Jahrg. 11, p. 7-8) 5 refs. **Title tr.:** Demonstration and review of a map by P. E. Terlezki on the dissemination of population in the far North of the Soviet Union.

Contains explanatory notes to a map published in Moscow 1933 by the Committee of the North. The map (copy in ICU; NN; photo copies in CaMAI; DLC) is in two sheets (about one and one-half sq. meter), at scale 1:5 million and is based on the census of 1926-27. Settlements of the nomadic peoples are marked in quadrangles and circles of different sizes and colors. The dissemination of 23 different ethnic groups and the density of population are thus clearly shown in an area from the Yenisey to Kamchatka. The settlements of Russian population are also marked. The densely populated Yakut settlements on the middle Lena and in the Aldan region are shown on a supplementary map (scale 1:1,666,667). **Copy seen:** DSL.

Leningrad, Izd-vo Glavsevmorputi, 1937. 188, [2] p., 16 illus., incl. charts, text-maps. (Materialy po gidrografii morei i rek sovet'skoi Arktiki, vyp. 1) *Title tr.:* Review of astronomical and geodetic work of the Hydrographic office of the Northern Sea Route, U.S.S.R. in 1925.

Contains (p. 4-12) an introductory but systematic description of various geodetic surveys and astronomical determinations completed in 1935 during the hydrographic investigation of the Northern Sea Route. The work was carried out by six expeditions and parties of the Hydrographic Office of Glavsevmorput' (Chief, P. V. Orlovskii); four hydrographic parties organized by the West-Siberian Hydrographic Office (Chief, E. I. Igolkin), and two parties organized by the East-Siberian Hydrographic Office. Part I presents *astronomical determinations* (p. 13-42): on the southwest coast of Kara Sea; in the lowest parts of the Ob', Lena, Pyasina, Olenek, Omolon and Kolyma Rivers; in the northeastern part of Kara Sea, Obskaya, Gydanskaya and Khatanga Bays, Vrangl and Gerd' Islands. *Triangulation work* (p. 43-81): on Vrangl, Vaygach, Novaya Zemlya and Dikson Islands, on the southeast coast of Barents Sea and southwest coast of Kara Sea; on the Yenisey, Pyasina, Ob' and Kolyma Rivers.

Pt. 2 comprises catalogs of the 54 astronomical points (p. 83-115), and (p. 116-87) the 411 points determined in 1935, with coordinates, azimuths, description and location.

Contains description of events after 1917: administration (forming of "soviets"), partition of fields and pastures, hunting affairs, schools, troubles between the new administration and natives, etc. The author is a Tungus.

Copy seen: DSI-M.

32799. VORONOV, A. Iuridicheskie obyechai Ostiakov zapadnoi Sibiri i Samofedov Tomskoi gubernii. (Russkoe geograficheskoe obshchestvo. Otdelenie etnografii. Zapiski, 1900. t. 18, p. 1-50) **Title tr.:** The Juridical customs of the Ostyaks in western Siberia and Samoyeds of the gov. of Tomsk.

Essay based on two mss: "Juridical life of Ostyaks in western Siberia" by N. Kostrov, and "Customs and manners of the Tomsk Samoyeds" by N. Grigorovskii. It deals with kin, family and inheritance, marriage customs, relations between husband and wife, parents and children, rights to the hunting or fishing territory, agreements and liabilities, traits of character (attitudes towards religion, community, family and property), dis-

position and morals, and finally the legal procedure.

Contains demographic description of this administrative district covering about 3,454,655 sq. versts and situated between 54°-73° N. 73°-114° E. Its terrain, natural conditions and climate are sketched briefly (average monthly temperature for the city of Yakutsk, p. 3 and 41). Its population in 1885 was 251,896 (18,666 Russians, and the rest native peoples). The following nationalities are described: the Yakuts (p. 4-29), Tungus (p. 29-32), Yukaghirs (p. 33-35), Chukchis (p. 35-37), Russians and European deportees (p. 37-41). For each nationality, data are given on occupation, mode of life, clothing and dwellings, food, family life, religion and beliefs, customs, etc.

the vegetative nervous system on the leucocytes according to investigations with the Ebbecke immersion reflex.

The trigeminal reflex was elicited in 12 healthy students by immersion of the face in cold water (Ebbecke's method), and the effect on pulse frequency, blood pressure and the leucocyte picture, studied. An absolute and percentage increase in lymphocytes and a decrease of neutrophils (with an increase of total leucocyte counts in over half the cases) was the primary reaction observed. It was followed by a reversal of the trend with an indication of further oscillation. These changes were independent of pulse frequency and the cardiac reaction.

32809. WADA, M. The effect of severe cold upon the rate of the denervated heart of non-anaesthetized, non-fastened dogs and the epinephrine secretion; (Japanese journal of medical sciences. Pt. 3, Biophysics, 1940. v. 6, p. 116*)

Contains a summary of experiments on dogs with rectal temperature lowered below 30° C. The heart rate showed a marked decrease when body temperature fell below 30° C. and reached 60-70 percent of the basal rate at 27° C. The decrease was less marked in animals with intact, than in such with demedullated adrenals. These results, as well as the behavior upon return to room temperature, are largely explainable on the basis of epinephrine secretion.

"The history, topography, forest cover, geology and drainage of Sweden are mapped. Detailed maps related to temperature conditions are presented. Maps giving the periods for the formation of ice on small lakes show that ice forms first in the interior of Norrland and later in the western mountain districts and along the coast . . . Ice melting dates are determined by the ice thickness which varies with the cold of winter. Ice breakup sets in latest in the western Upland regions. Ice on the smaller lakes lasts about 115 days in the south, and over 200 in the north. The ice conditions in the seas surrounding Sweden are discussed. The percentage of precipitation occurring as snow is mapped and varies from 70 percent in the north to 10 percent in the south. The number of days with snow covering varies from 254 at Riksgränsen in the north to 34 at Lund in the south. Maps on river discharge, water power resources, atmospheric pressure, and wind are also included."—SIPRE. Sweden extends to 69°4' N. lat. and about 15 percent of its area is north of the Arctic Circle. *Copy seen:* DLC.

32825. WALLÉN, CARL CHRISTIAN, 1917- . Influences affecting glacier extension in northern Sweden. (International Geodetic and Geophysical Union. Association of Scientific Hydrology. General Assembly, Brussels, 1951, pub. 1952? t. 1, p. 145-53, tables, graphs) 11 refs.

Contains results of investigations, carried on mainly during 1942-48, on the Kårsa Glacier in northern Sweden. Accumulation on the glacier was found to be very persistent from year to year. Meteorological influences on the ablation process are discussed in detail. Tables show the influence of evaporation and of melting by radiation, convection, and conduction on the ablation of snow and ice. "An increased general circulation of

the atmosphere in recent years has intensified the air exchange between the north and the south over the Atlantic European sector of the Northern Hemisphere, increasing the influence of factors contributing to ablation and causing a shrinkage of all the glaciers in the area."

—SIPRE. The increase in summer temperature was found to be the most important factor in increased ablation.

32828. WALSH, LAWRENCE B., and others. The effect of low temperature on the morphology and transplantability of Sarcoma 37. (Cancer research, Nov. 1950. v. 10, p. 726-36, 14 illus., 2 tables) 40 refs. **Other authors:** D. Greiff, and H. T. Blumenthal.

Contains a study on the effects of 0° C., -30° C., -70° C. and -190° C.

on Sarcoma 37 of mice. Freezing did not appreciably alter the latent period of transplants, nor their morphological characteristics before or after development of the transplant. After exposure to 0° C., the percentage of takes was inversely proportional to the time of exposure. Exposure to temperatures lower than 0° C. caused regression of some tumors after an initial period of growth and, loss of viability after several subsequent passages in an unfrozen state. Repeated freezing and thawing also causes loss of viability.

32831. WALTHER, HEINZ. Beitrag zur Therapie der Kälteschäden der Haut. (Zeitschrift für Haut- und Geschlechts-Krankheiten und deren Grenzgebiete, July 15, 1947. Bd. 3, nr. 2, p. 77-79) 5 refs. *Title tr.:* Contribution to the treatment of cold injuries of the skin.

Contains an account of the causes of recent increase in cold injuries and the beneficial effect in mild cases (pernio, erythrocyanosis) of Forapin, an ointment hitherto applied in myalgias, neuralgias, etc. *Copy seen:* DSG.

32832. WAMBHEIM, H. G. "Ben": the life story of Col. Carl Ben Eielson. Hatton, North Dakota, 1930. 40 p. illus.

Contains a popular account of the life of the arctic and antarctic pilot. His efforts to establish airmail service and a network of commercial airlines in Alaska, are stressed. The story is related of his flight across the Pole from Alaska to Spitsbergen with Sir Hubert Wilkins in April 1928, and his exploits in Wilkins' other arctic expeditions. His participation in Wilkins' antarctic expedition of 1928-29, and his death Nov. 9, 1929, attempting an aerial relief of the ice-bound *Nanuk* in Chukchi Sea are briefly described. *Copy seen:* CAMAI.

32833. WARBURTON, SWANTON, Jr. The brown bears of Chichagof Island, Alaska. (Murrelet, 1931. v. 12, no. 3, p. 79-80)

Contains notes on the allegedly vicious habits of large brown bears on Chichagof Island, southeastern Alaska. Three experiences are described when these animals attacked men without any provocation; in one of these cases a man was frightfully mutilated and died of wounds.

Copy seen: MH-Z.

32834. WARD, AGNES SPOCK. Frostbite. (American journal of nursing, Jan. 1952. v. 52, p. 68-69, illus.)

Contains an article by a general duty nurse at Osaka Army Hospital in Japan, dealing with degrees of frostbite and their treatment; supporting treatment; physical therapy; rehabilitation.

Copy seen: DLC.

32835. WARD, KENNETH ALAN, 1918- . Arctic interlude. (Canadian Medical Association. Journal, Oct. 1952. v. 67, p. 292-98, illus., sketch map) 5 refs.

Contains account of the author's med-

ical work during two years' residence in Aklavik, Mackenzie District, as officer of the Indian Health Service, etc., with information on: local hospitals, TB, daily routine; measles epidemics; sanitation; Indians and Eskimos, etc.

Copy seen: DSG.

32836. WARD, WILLIAM H., and S. ORVIG. The glaciological studies of the Baffin Island Expedition, 1950, Part IV. The heat exchange at the surface of the Barnes Ice Cap during the ablation period. (Journal of glaciology, Apr. 1953. v. 2, no. 13, p. 158-68, table, graphs, diagr.) 8 refs.

"The atmospheric heat causes melting of the whole of the annual snow accumulation and leads to the formation of slush rivers. Some of the melt-water refreezes at the original ice surface and forms a new layer of ice which yields its latent heat downward. A theoretical estimate of the rate of formation of superimposed ice and the change of temperature of the original ice agrees with actual measurements. Measurement of the meltwater run-off checks with observed ablation and superimposed ice. The total energy available for melting as observed from radiation and convection underestimates the actual ablation measured. About 70 percent of the energy received during the melting season is discharged as meltwater to rivers and lakes surrounding the low temperature ice."—SIPRE. For previous part of these studies, see *Arctic Bibliography*, No. 20451, 27260-27261.

Copy seen: DLC.

32837. WARD, WILLIAM H. The physics of deglaciation in central Baffin Island. (International Geodetic and Geophysical Union. Association of Scientific Hydrology. General Assembly, Brussels, 1951. pub. 1952? t. 1, p. 237-45, illus., diagrs., graph, sketch map) 5 refs.

Contains results of investigations made by the writer during the Baffin Island Expedition of the Arctic Institute of North America, May-Sept. 1950. The area studied was at the southern end of the Barnes Ice Cap (about 70° N. lat., inland from Clyde Post). The physical processes of deglaciation and formation of glacial deposits were studied by observing (1) the melting out of deposits held in the ice, (2) the "subsequent forms of deposition," and (3) the "occurrence of buried glacier ice well beyond its present visible limits." Glacial deposits and their

origin are discussed in detail in terms of these three subjects, and the landforms around the edge of the icecap are described. **Copy seen:** DGS.

32838. WARDLE, HARRIET NEWELL, 1875- . Attu treasure. (Pennsylvania. University. University Museum. Bulletin, Apr. 1946. v. 11, no. 4, p. 23-26, 2 plates)

Contains note on the Aleuts of Attu Island, the last of whom, 96 in number, were taken by the Japanese in World War II. Their stone and bone artifacts are mentioned, and a detailed description given of their cylindrical storage baskets and telescoped pouches, artistically woven and decorated with beach grass by the women. A collection of Attu artifacts and baskets is in possession of the Museum. **Copy seen:** DLC.

32839. WARDLE, HARRIET NEWELL, 1875- . Eskimo Tun-ghat mask. (Pennsylvania. University. University Museum. Bulletin, May 1937. v. 6, no. 6, p. 9, 12, col. plate)

Contains description of a rare mask, Man-in-the-Moon, collected from the Eskimos of Hooper Bay, western Alaska, by W. B. Van Valin, and now in possession of the Museum. Such masks represent the shades of men and semi-human animals, or the inhabitants of the moon and skyland; they were carved by angekoks (shamans) and used at the Feasts to the Dead and the shamanistic Inviting-in ceremonies. **Copy seen:** DLC.

32840. WARE, ARNOLD GRASSEL, 1915- , and others. The effect of interference with respiration on the control of body-temperature in white rats and New Zealand rabbits. (American journal of physiology, 1947. v. 149, p. 657-66, 6 figs.) 7 refs. *Other authors:* R. M. Hill, and F. H. Schultz.

Contains an account of experiments on rats and rabbits having the thorax and abdomen tightly wrapped, to interfere with respiration. When placed in a cold room of 2°-4° C., the animals' body temperature fell at a rate depending on the tightness of wrapping and amount

of movement. When the wrappings were removed rats frequently regained normal body temperature even in the cold environment. When returned to room temperature, newborn rats could recover from a body low of 5° C.; rats 30, 60, 80, and 600 days old recovered under similar circumstances, from body temperatures of 8°, 11° and 15° C. O₂ content of venous blood of hypothermic rabbits showed a pronounced fall, while CO₂ rose, in a manner parallel to the fall in body temperature. **Copy seen:** DLC.

32844. WARNSTORF, CARL FRIEDRICH, 1837-1921. Zur Bryo-Geographie des Russischen Reiches. Eine Erinnerung an Dr. E. Zickendrath. (Hedwigia, 1913, Bd. 53, Heft 4-5, p. 184-240, 6 illus.; Heft 6, p. 241-320, 18 illus.; 1914, pub. 1913, Bd. 54, Heft 1-2, p. 22-112, 18 illus.; Heft 3-4, p. 113-82, 6 illus.) 34 refs. **Title tr.:** Contributions to the geography of the Bryophyta of the Russian Empire. In memoriam, Dr. E. Zickendrath.

Contains a study of the geographic distribution of liverworts, hornworts and mosses of Russia, based mostly on collections of Dr. Ernst Zickendrath (1846-1903) and on smaller collections of some Finnish bryologists (Bomanesson, Brotherus, H. Lindberg and Ramann). A systematic list is given of all known species and forms inhabiting Russia (including Finland, Poland and the Baltic provinces), with their geographic distribution. Many of the species are native to northern regions of European and Asiatic Russia. The study was undertaken for the tenth anniversary of the death of Dr. Zickendrath.

WASHBURN, ALBERT LINCOLN, 1911-. The Arctic Institute of North America and Alaskan research. See Alaskan Science Conference, Nov. 1950. *Proceedings*, 1951. No. 20117.

32846. WASHBURN, HENRY BRAD. FORD, 1910-. The first ascent of Mount Deception. (Sierra Club bulletin, May 1951. v. 36, no. 5, p. 94-105, 15 illus.)

Contains popular account of a 43-man expedition in Nov. 1944 to investigate an air crash on Mt. Deception in the Alaska Range on Sept. 18. The climb and excavating for the wreckage are described in some detail, and illustrated by photographs. **Copy seen:** DGS.

32847. WASHBURN, HENRY BRAD. FORD, 1910-. Mapping Mount McKinley: highest peak in North America was scaled by a survey party to locate its features accurately. (Scientific American, Jan. 1949. v. 180, no. 1, p. 46-51, illus., text map)

Contains a popular account of work done by a 13-man party from the Boston Museum of Science, Apr.-June 1947, with the assistance of several government agencies. The area was photographed from the air prior to establishing ground control points. The actual surveying was done by the writer and two assistants. Methods of operating a theodolite in weather conditions found on the north and south peaks are described.

Copy seen: DLC.

32848. WASHBURN, HENRY BRAD. FORD, 1910-. Mount McKinley conquered by new route: landing by plane on a glacier, climbers pioneer a western approach to North America's loftiest peak. (National geographic magazine, Aug. 1953. v. 104, no. 2, p. 219-48, illus. incl. 2 maps)

Contains a popular account of an eight-man expedition during June and July 1951. The party successfully tested a western approach to the summit, carried out geologic studies, and accomplished survey work for a new large-scale map of the Mt. McKinley area. Part of this map, a shaded relief contour map, scale one in.: one mi., is shown. Well illustrated with photographs by the author.

32849. WASHBURN, HENRY BRADFORD, 1910- . Mount McKinley weather experiences. (Weatherwise, Feb. 1952. v. 5, no. 1, p. 3-7, illus., map)

"Mount McKinley is said to be the highest vertical uplift on earth, rising >20,000 ft. above a plain. Southwesterly storms bring warmer weather at 18,000 ft., where the author lived for three weeks in 1947. Average minimum temperature -25° F. Southwesters are preceded by cirrus streamers at 30,000 ft., increasing winds, temperature rising to zero or above, and seldom come suddenly or unexpectedly. Out of 89 days only five were CAVU (clear). Best (most stable and mild) weather is in July. April is clearest, but bitter NE and NW gales prevail then. CuNb anvils reach 20-25,000 ft. in July. Sudden storms can occur at times when lenticular clouds form due to influence of mountains on air flow. Minimum temperature at Denali Pass (18,000 ft.) during four-year period (1947-1951) was -59° F. Hudson Stuck's reported -90° F. minimum (1913-1932) at 14,600 ft. is questionable."—*Meteorological abstracts & bibliography*, Apr. 1953. v. 4, no. 4, p. 474.

Contains "a descriptive study of the solar daily magnetic variation for the month of July 1933. The magnetic field pattern for the Northern Hemisphere, from data obtained at the 44 stations of the Second International Polar Year, is deduced with good coverage in north polar regions. An atmospheric current-system, which would produce the observed field, is derived. Changes in field dependent on Universal Time are neglected."—Author's abstract.

Copy seen: DGS.

32851. WATER AND WATER ENGINEERING. Sweden. (Water and water engineering, London, 1951. v. 55, no. 667, p. 337)

Brief note about the world's widest water-power tunnel, now being built in northern Sweden to supply water to the new Kilforsen power plant. It will be over 11,000 ft. in length and have a cross section area of about 1,750 sq. ft.

Copy seen: DLC.

32852. WATERHOUSE, ROBERT W., and A. N. SILLS. Thaw blast method prepares permafrost foundation for Alaska power plant. (Civil Engineering, Feb. 1952. v. 22, p. 126-29, illus., diagrs.)

"The area [around Ladd Air Force Base] was found to be composed of river-deposited stratified sandy gravel, the porosity and grain size of which varied erratically, and was underlain by permafrost from 17-60 ft. below the surface. It was established that significant settlement would take place as a result of thawing. The method of shock and vibrations was used to test further consolidation under load. Blasting tests showed that thawing to 30 ft. below grade and consolidation by blasting was required. Three temperature wells, 36 ft. deep, were put down to indicate general thawing effect, and 51 reference pipes were installed to measure soil elevation changes. Steam points were jetted down 24 ft. Steam was provided by two boilers with a capacity of 220 hp. each and operated at 60-lb. pressure. Details of the site preparation work and of the blasting procedures are given."—SIPRE.

32859. WEBB, H. MARGUERITE, and others. Relationship between time of day and inhibiting influence of low temperature on the diurnal chromatophore rhythm of *Uca*. (Biological bulletin, Oct. 1953. v. 105, no. 2, p. 386-87) *Other authors:* Miriam F. Bennett, Robert C. Graves, and Grover C. Stephens.

Brief exposure of *Uca pugnax* to a temperature of 5° C. was found to inhibit the diurnal rhythm as seen in the black chromatophores. Following longer exposures, a shift in the phases of the diurnal rhythm took place, but in no case did the extent of the shift equal the chilling period. When the extent of inhibition was compared with controls, it was found to vary in a regular manner, with the time of day at which the animals (crustaceans) were chilled.

Contains a popular article based in part on the author's work in Kong Christian X Land (73°-75° N. 30° E.) with the Three-Year Expedition to Christian X's Land 1931-34 under Lauge Koch. The shape, structure, genesis and occurrence of the various kinds of snow and ice in the Arctic are discussed and their effect on plant life and transportation analyzed on occasions; penitent snow is briefly noted. "The ice and snow forms are classified into single-year and multiple-year forms. Single-year forms include fjord ice, the snow of the depressions, and river ice; the multiple-year forms include sea ice, firn, and glacier ice. The properties, extent and duration of each are discussed. The snow in the depressions was found to be of very low density, 1 cm. snow corresponding to 0.31-0.35 mm. water at temperatures between -9° to -12° C."—SIPRE.

32867. WEIGMANN, RUDOLPH. Zur Frage des adäquaten Reizes für Thermo-receptoren. (Pflügers Archiv für die gesamte Physiologie, 1951. v. 254, no. 3, p. 272-80, illus.) 15 refs. *Title tr.*: On the problem of the adequate stimulus for thermoreceptors.

Contains a study on the dependence of the threshold of temperature stimuli for single cold or warm receptors upon the surface temperature of the skin. Within certain limits of skin temperature, there was a dependence on it of the threshold in both cold and warm receptors; beyond these limits the threshold remained constant. With increasing skin tempera-

ture the sensitivity of the cold receptors decreased.

32868. WEINBERG, SYLVAN L., and others. Foot conditions and bootgear in combat. (U. S. Armed Forces medical journal, Aug. 1953. v. 4, no. 8, p. 1139-48, tables) *Other authors:* C. W. Ulrich, and K. D. Orr.

Contains a report on interviews and examinations of front-line soldiers wearing a new type of combat boot with rubber insulation, designed to give special protection against cold and/or moisture. The incidence of epidermophytosis, hyperhidrosis, maceration and erythema in men wearing this boot was significantly higher than in those wearing the shoe-pac or the leather combat boot. The usefulness of the formula-V foot powder was also studied.

Contains report of the expedition, consisting of the authors, whose main purpose was to investigate the possibilities of introducing Danish law and if so, to what extent. Aside from current regulations, Greenland has no criminal law and the laws on civil matters are largely behind the times. The unwritten laws which are applied therefore, were the subject of investigation and are discussed in some detail. Clashes between them and the Danish legal viewpoint do occur,

but introduction of a more fixed legal system seems likely with the general development of Greenland.

"A structural study of rocks of the Hecla Hook formation in the area of Forlandsundet [between Isfjord and St. Jonsfjord] of Vestspitsbergen reveals the presence of two B-axes. The earlier (B_1) trends roughly north-south, and affects also rocks of Carboniferous age. It is suggested that B_1 is the main 'Caledonian' axis in this area, and that B_2 and the roughly north-south 'grain' of the rocks concerned are Lower Tertiary phenomena."—Author's abstract.

"Starting methods most suitable for tactical operations under combat conditions in the Arctic are investigated. Cold-starting kits tested include gaseous propane units and highly volatile liquid fuel units. Cold starting with regular grade AN-F-28 gasoline is studied with respect to minimum temperature limits. The present minimum starting temperature with AN-F-28 fuel and the standard priming system was found to be between 0° and -10° F. for radial engines with pressure-type carburetors. The starting temperature is between -10° and -15° F. for radial engines with direct cylinder-injection carburation and for inline engines. It is estimated that more effective priming systems could lower the limits to -30° or -35° F. without the use of special fuels or equipment. Oil dilution is believed to increase engine life under arctic conditions."—SIPRE.

32879. WERENSKIOLD, WERNER, 1883- . The strand flat of Spitsbergen. (*Geografisk tidsskrift*, København, 1952. 53. v. 52, p. 302-309, illus., sketch map, 4 text maps) 2 refs.

Contains a description of the southwest coast of Vestspitsbergen between Bellsund and Sørkapp, based upon investigations by the author, 1917-23, and a topographic map completed in 1952. The various sections of the strandflat are described and the topography illustrated by maps. Most sections show a series of raised beaches and wave-cut platforms running from the sea to the mountains and similar to those found in other arctic regions including northeastern Ellesmere Island and Franz Josef Land. Some striae on the promontories, and valleys "hanging" in relation to the strandflat, show that the flat was formed prior to the last glaciation, but the invasion of the sea to the foot of the

mountains at a period following the glaciation destroyed much of the glacial evidence.

32883. WEST, WALTER SCOTT, 1912-. Reconnaissance for radioactive deposits in the Darby Mountains, Seward Peninsula, Alaska, 1948. Washington, D. C., 1953. 7 p. fold. map, 2 tables (U. S. Geological Survey. Circular 300) 3 refs.

The geology of this region in southeastern Seward Peninsula is discussed with a brief note on mineral deposits. Radiometric analyses and mineralogic studies were made on samples from placers in various parts of the region to determine content of radioactive minerals, and it was found that radioactivity appeared to be directly related to the occurrence of granite. Although uranium- and thorium-bearing minerals are probably largely disseminated in the granite, it is suggested that local concentrations may have been formed during a late stage of consolidation of the granite magmas. A cover of vegetation and talus hinders exploration.

32889. WESTRATE, LEONARD. Testing automotive equipment under severe arctic conditions. (Automotive industries, Apr. 15, 1952. v. 106, no. 8, p. 35, 98, 100, illus.)

A Swedish summary of this paper was pub. as Amerikanska arméns arktiska försök med fordon (The American army's arctic tests of vehicles) in: Pansar, militär-teknisk tidskrift, 1952. Årg. 21, nr. 11-12, p. 25, illus. (copy in DLC).

The Army Test Branch (ATB) of the U. S. Army Field Forces, at Big Delta, 105 miles southeast of Fairbanks, Alaska, is running a year-round proving ground for Ordnance combat and tactical vehicles and other military equipment under arctic and subarctic conditions. Local temperatures range from -70° F. to +90° F. Rapid temperature changes are frequent, varying as much as 68° F. within a few hours. Research has been carried on in operating procedures, such as the improvement of cold weather starting methods, and in the development of materials suitable for use under intense cold-weather conditions, such as subzero oil, batteries, fan belts, coolants and low temperature tires. The ATB is also proving new vehicles, testing automotive transmissions, and testing a Canadian snowmobile.

32897. WHITE, J. C. D. Composition of whales' milk. (Nature, Apr. 4, 1953. v. 171, no. 4353, p. 612, table) 6 refs.

Contains an analysis of eight samples of milk from blue whales and fin whales, by methods employed for ordinary milk. The milk, very similar in both species, is much richer in fat and protein, and poorer in lactose than cows' milk. Rich milk of this type, found also in other cetaceans, seems to be characteristic of animals living in cold environment and whose young grow rapidly. **Copy seen:** DSG.

32898. WHITE, JAMES C., and S. WARREN. Causes of pain in feet after prolonged immersion in cold water. (War medicine, 1944, v. 5, no. 1, p. 6-13, 6 fig.) 4 refs.

Contains a report of four cases of immersion in cold water and of microscopic examination of the biopsy material. The cause of pain in the early phase of inflammation is ascribed to anoxia of the injured superficial tissue and nerve endings; that of late pain and rigidity is seen in the increase of interstitial connective tissue and collagen, involving the blood vessels, muscle fibers and nerves. Pain of the first type is controlled by cooling; that of the latter type tends to clear

after 6-8 months. Abstracted by R. Greene in *Bulletin of war medicine*, July 1944, v. 4, no. 11, p. 625-26.

Copy seen: DLC.

32899. WHITE, JAMES C. Immersion foot. (Modern concepts of cardiovascular disease, Feb. 1944. v. 13, 2 p.) 5 refs.

Contains a report based on experience with patients who developed the syndrome while adrift for a long period in cold waters. Includes information on the physiology, and pathology of the succeeding stages; first aid; treatment.

Copy seen: DLC.

32900. WHITE, JAMES C., and W. B. SCOVILLE. Trench foot and immersion foot. (New England journal of medicine, Apr. 1945. v. 232, no. 15, p. 415-22, 9 fig.) 18 refs.

Contains an account based on experience with survivors of torpedoed vessels, exposed to cold water during a long period. Three stages in the course of the resulting syndromes are described, and the similarity with trench foot and difference from frostbite, outlined. Initial and late treatment are also dealt with, as well as gangrene and sequelae. The importance of protective clothing, foot care, etc., is stressed. **Copy seen:** DLC.

32901. WHITE, JAMES C. Vascular and neurologic lesions in survivors of shipwreck, 1. Immersion-foot syndrome following exposure to cold. (New England journal of medicine, Feb. 18, 1943. v. 228, no. 7, p. 211-22, 4 fig., table) 27 refs.

Contains an account based on observation of 32 patients, with information on earlier studies. Condition and symptoms of the patients, extent of gangrene, similarities with frostbite, prophylaxis, therapy (first aid, hospital treatment), and prognosis are presented.

32902. WHITE, MAX GREGG, 1916- , and P. L. KILLEEN. Reconnaissance for radioactive deposits in the lower Yukon-Kuskokwim highlands region, Alaska, 1947. Washington, D. C., 1953. 18 p. 4 sketch maps, 7 tables. (U. S. Geological Survey. Circular 255) 11 refs.

Contains a report of radioactivity investigations in the Flat area (360 mi. southwest of Fairbanks) and a radiometric and mineralogic study of ten concentrate samples from the placers of Julian, Moore, and Candle Creeks and

the Cripple Creek Mts. The geology of the Flat area is briefly given. No deposits of any consequence were found in any of the regions studied, but investigations in other parts of the lower Yukon-Kuskokwim area are suggested. Tables contain data on uranium percentage in samples taken.

Copy seen: DGS.

32903. WHITE, MAX GREGG, 1916- , and **J. M. STEVENS.** Reconnaissance for radioactive deposits in the Ruby-Poorman and Nixon Fork districts, west-central Alaska, 1949. Washington, D. C., 1953. 19 p. 4 sketch maps, 10 tables. (U. S. Geological Survey. Circular 279) 9 refs.

The geology and mineral deposits of each area are briefly noted, and radioactivity investigations described. In the Ruby-Poorman region (just south of the Yukon River, 230 miles west of Fairbanks), commercial deposits of uranium are considered unlikely, although heavy vegetation and alluvium hinder complete coverage of the area. In the Nixon Fork region (in Kuskokwim Mts.) the only radioactive mineral of major importance is uraniferous thorianite; its bedrock source has not been located, and radiometric exploration is hindered by heavy moss cover. Geochemical prospecting techniques are suggested. Data from samples are given in tables.

32904. WHITE, MAX GREGG, 1916- , and *others.* Reconnaissance for radioactive deposits in the vicinity of Teller and Cape Nome, Seward Peninsula, Alaska, 1946-47. Washington, D. C., 1953. 2 p. 1, 8 p., map. (U. S. Geological Survey. Circular 244) *Other authors:* W. S. West, and J. J. Matzko.

Contains a report of investigations of placer mining areas and bedrock exposures in the regions of Dese, Sunset and Swanson Creeks and the Bluestone River, on Seward Peninsula, for possible sources of radioactive materials. "No significant amount" was found in stream gravels or in the schist, slate and greenstone of the bedrock. *Map* (scale 1:166,320) shows drainage of placer gold area near Teller.

Copy seen: DGS.

32905. WHITE, MAX GREGG, 1916- , and **W. S. WEST.** Reconnaissance for uranium in the Lost River area, Seward Peninsula, Alaska, 1951. Washington, D. C., 1953. 4 p. text map, table.

(U. S. Geological Survey. Circular 319) 11 refs.

Contains results of work in western Seward Peninsula, northwest of Teller. Minor amounts of radioactive material were found in mineralized parts of rhyolite dikes and in an iron-enriched zone in limestone, the uranium occurring as an impurity. No deposits of economic importance were found. Analyses of samples are given. Development work is being done in this area preparatory to mining tin and tungsten.

32908. WICHMANN, HUGO. Jacobis Winterreise auf Kanin. (Petermanns geographische Mitteilungen, 1914. Bd. 60, p. 148) *Title tr.*: Jacobis's winter journey in Kanin.

Contains a short description of a trip made by A. Jacobi, director of Zoological and Ethnographical Museum in Dresden, to the Kanin Samoyeds in Oct.-Nov. 1913. He was accompanied by August Sprogis, a Latvian political prisoner in Mezen', who knew Russian, German and a little of the Samoyedic language. Jacobi traveled by sledge from Pinega to Mezen', thence by wagon to the Nes, and by reindeer sledge to Kiya. On the western coast of the Kanin Peninsula he found the Russian cultural influence had made great advances, almost all the household utensils were modern, but the clothing and everything pertaining to reindeer breeding had preserved its original character. The ethnographical collection which Jacobi brought home is described in his *Eine völkerkundliche Sammlung von d. europ. Samojeden*, q. v.

Bd. 2, p. 165-83) *Title tr.*: Samoyedic borrowings in the Zyryan language.

Contains linguistic study of sounds (37 cases) and words (22 in all), which the Zyryans took over from Samoyeds. At the end of the article some of the reverse cases are treated: Words borrowed by the Samoyeds from Zyryans. Most of the Samoyedic words adopted by Zyryans deal with reindeer breeding, preparation of furs, and names for garments. Only the northern Zyryans came into direct contact with Samoyeds. The author mentions also earlier papers on the same question by Aug. Ahlqvist and I. Halász.

32916. WIGGINS, IRA LOREN, 1899-. The organization and facilities of the Arctic Research Laboratory. (*In his and others: Current biological research in the Alaskan Arctic, 1953, p. 3-6*)

The Arctic Research Laboratory sponsored and supported financially by the U. S. Office of Naval Research and (then) operated by Johns Hopkins University, is located on the Arctic Ocean at Point Barrow, Alaska, in U. S. Naval Petroleum Reserve no. 4 (71°20' N. 156°40' W.). The physical plant is described, including laboratory, transport, and housing facilities. The topography, climate, and vegetation of the area and the insect and animal life are briefly noted. Primarily physiological at first, the program now includes investigations of bird migration, of fish, insect, and mammal faunas, and of paleobotany and living flora. Ecological investigations, and work in anthropology, crystallography of ice, magnetic storms, the aurora, and various military projects are carried on.

32920. WILDE, EDWIN. Health and growth of Aleut children. (Journal of pediatrics, 1950. v. 36, no. 2, p. 149-58, tables) 7 refs.

Contains a study on the general health, growth and development of infants and school children on St. Paul Island, Alaska, with an introduction on the economic and nutritional status of the population as a whole. The health of the children was found to be above average. Daily supplements of vitamins, close supervision by school authorities, nurse and physician, and enlightenment of children and parents in matters of

nutrition and hygiene are considered responsible for the favorable condition. The people of this island (in the Pribilof Islands) are wards of the U. S. government and subsist on a white man's diet.

Palo Alto, Calif., Nov. 1953. 5 l. 2 charts. (Stanford University. Natural History Museum. Technical report 3. Contract N6on-25136, NR307 204). Mimeographed.

Eighteen hydrographic and collection stations were occupied Aug. 9-12, 1953, by a three-man scientific party on the LCM Red. The route lay along the arctic coast of Alaska in the inshore waters between Barter Island and Point Barrow. At each station, surface and bottom temperatures, water samples, and

plankton were obtained and soundings were made. Coordinates of stations, and temperature and salinity records are given. Studies were made under a Stanford University - U. S. Office of Naval Research contract. **Copy seen:** DGS.

32923. WILIMOVSKY, NORMAN J. Inshore temperature and salinity data during open water periods, Point Barrow, Alaska, 1951-53. Palo Alto, Calif., Dec. 1953. 14 l. fold. chart, 5 tables. (Stanford University. Natural History Museum. Technical report 4. Contract N6onr-25136, NR307 204) 2 refs.

Contains results of studies made at the Arctic Research Laboratory, Point Barrow, under a Stanford University - U. S. Office of Naval Research contract. Tables give daily sea temperatures for July 8-Nov. 21, 1951, July 8-Oct. 5, 1952, and July 11-Aug. 24, 1953; also salinity records for July 13-Sept. 30, 1952, and July 11-Aug. 5, 1953. Data were obtained at the surface in water about 1 m. deep, opposite the site of the Arctic Research Laboratory (71°19'45" N. 156°40'05" W.). Methods of making observations are described and comments given on ice conditions, viz., date of formation of frazil ice, freeze-up, and break-up 1951, 1952, and 1953 (incomplete).

32924. WILKERSON, ALBERT SAMUEL, 1897- Determinative mineralogy for the Alaskan prospector. College, Alaska, University of Alaska, 1947. 56 p. Mimeographed.

Contains an "easy method of determining unknown minerals that the prospector in Alaska might find from time to time." The booklet is intended for those without formal technical training in mineralogy. Seventy-five Alaskan minerals are included. Necessary equipment and chemicals for the tests are listed and mineralogical terms explained. The main section consists of tables for determining the minerals, followed by a summary of chemical and blowpipe tests for the more important elements (which are listed alphabetically). An index of elements, minerals, and subjects is included.

32926. WILLIAMS, JOHN ROPES, 1924- Icings in Alaska, 1949-1950. Washington, D. C., June 1953. 23 p. illus., 2 maps (1 fold.). Mimeographed. (U. S. Army. Corps of Engineers. Engineer Intelligence Division. Engineering notes, no. 32) 6 refs. Prepared by U. S. Geological Survey in cooperation with Office of the Chief of Engineers.

Contains report based on observations of icings along sections of the Glenn, Richardson, and Alaska Highways, winter 1949-50. Icings are defined and classified into four groups: (1) river (or flood-plain) icings; (2) ground icings; (3) icings below seepages or springs; (4) mixed icings. Their significance to maintenance of roads, buildings, and bridges is examined, and methods of control on highways are discussed. All icings observed on the three highways are listed and shown on the map, with locations given and notes on type, maintenance measures, and time of spring thaw. The smaller icings extended 20-50 ft.; those along rivers were much larger. An icing classification according to Chekotillo is included.

Copy seen: DGS.

32927. WILLIAMS, R. C. On some northern Lepidoptera Rhopalocera. (Entomological news, 1931. v. 42, no. 6, p. 157)

Contains a list of five lepidoptera collected by S. C. Palmer on the south shore of Frobisher Bay on Baffin Island, and seven lepidoptera taken at Cape Mugford in Labrador, while he was a member of the Bowdoin-Baffinland Expedition of 1929. **Copy seen:** MH-Z.

32928. WILLIAMS, RALPH B. Ancient man's quest for health leads way to

today's laboratory. (Alaska's health, Feb. 1952. v. 9, p. 1-2, illus.)

Contains an account of the role of the laboratory in medicine generally and in Alaska in particular; laboratory aid in combatting tuberculosis and syphilis; bacteriological laboratory work; diagnostic work, etc. **Copy seen:** DSG.

32929. WILLIAMS, RALPH B. Facts about other fishworms. (Alaska's health, Feb. 1952. v. 9, p. 5, illus.)

Stressing the fact that nearly all fish, like the mammals, have their worm parasites, the author points out that only one of these (*Diphylllobothrium latum*) affects man in Alaska, which should be no cause for alarm. Sufficient cooking is the best preventive. **Copy seen:** DSG.

WILSON, H. P., see Berry, F. A., and others. Arctic weather maps. 1951. No. 28107.

32934. WILSON, J. WARREN. The initiation of dirt cones on snow. (Journal of glaciology, Nov. 1953. v. 2, no. 14, p. 281-87, diagrs., table) 7 refs.

Contains results of study on Jan Mayen Island, June 1950. Cones are formed under a layer of coarse, dark sand like the wind-borne volcanic sand of Jan Mayen and Iceland. Development of the cones is dependent on relation of ablation rates to depth of dirt, and shrinkage and expansion of the snow surface during ablation. Later stages of

cone formation and experiments producing artificial cones are described.

32939. WILSON-DICKSON, W. G., and C. H. WYNDHAM. Thermal responses of extremities to cold in relation to body temperature. (Journal of physiology, 1950. v. 111, p. 16P) 6 refs.

Contains an abstract concerning a study of the possibilities of preventing excessive cooling of extremities, especially hands. Maintenance of body temperature was observed to override variations in gloves. Marked cooling of hands and feet, concurrent with the body cooling and at rest, was quickly reversed when the body temperature was raised by light work. This suggests the predominance of vascular responses in the extremities to body temperature, within the temperature limit studied (-10° C.).

"An equation for computing the direction and magnitude of the water currents in the ocean from the vertical density distribution, the direction of the mass transport current in restricted waters, the direction of the tidal current in restricted waters, and a relationship between ice drift and surface wind velocity are developed theoretically. It is concluded that ice drifts with a speed of about 0.02 times the speed of the surface wind and,

*Arctic Bibliography No. 19578.

in the Northern Hemisphere, has a drift angle of about 45° to the right of the wind stress. An analysis of actual conditions encountered during arctic operations is made. The tidal current is usually the major force acting on the drift and convergence of the ice in restricted waters. The direction and magnitude of water currents can be computed and used in the forecasts of ice drift if oceanographic stations are available."—SIPRE. **Copy seen:** DWB.

32941. WINDERS, CURTIS W., 1924- . \$1500 a month, no place to go. By Bill Brinkley, [pseud.] (Life, international ed., Oct. 6, 1952. v. 13, no. 7, p. 64-68, 8 illus.)

Account of recruitment, pay, working and living conditions, recreation, etc., of the 8500-man, mainly civilian, work force constructing the air base at Thule, northwest Greenland. Health, food, clothing, etc., and the camp newspaper *Polar post* are briefly mentioned and illus. **Copy seen:** DLC.

32942. WINGERT, PAUL STOVER, 1900- . Tsimshian sculpture. (In: American Ethnographical Society. The Tsimshian: their arts and music, 1951, p. 73-94, 18 fig., 23 illus. on 8 plates)

Contains an account of Northwest Coast art as displayed on masks and totem poles: analysis of the elements common to the various tribes, and of the Tsimshian style in comparison with that of the Haida and Kwakiutl. Tsimshian art is found to represent the "classic" style of the genre, with emphasis on realistic portrayal, clarity of definition, simplicity and directness of interpretation.

32944. WINKLER, HEINRICH, 1848-1930. Die altaischen Sprachen. (Ungarische Jahrbücher, 1924. Bd. 4, Heft 1, p. 1-14) **Title tr.:** The Altaic languages.

Contains author's defense of his theory on an Altaic linguistic group, outlined in his *Die altaische Völker und Sprachenwelt* (q. v.). To the Altaic group, according to the author, belong the Finno-Ugric, Samoyedic, Mongolic, Turcic, and Tungusian languages. Some affinities are to be found also in Japanese. The author says, however, that these languages later had a quite independent development, hence there are fewer affinities among them than among those of the Indo-European, or Semitic linguistic groups. **Copy seen:** DLC.

32945. WINKLER, HEINRICH, 1848-1930. Tungusisch und finnisch-ugrisch. II. (Suomalais-ugrilainen seura. Aikakauskirja, 1923. v. 39, no. 1, p. 1-34) **Title tr.:** Tungus and Finno-Ugric languages, 2.

Contains linguistic comparison of the two languages: stressing their common features in sentence construction, role of nouns and pronouns in a sentence, etc. Pt. 1 was listed as *Arctic Bibliography*, No. 27448.

Copy seen: InU.

32946. WINKLER, HEINRICH, 1848-1930. Das Uralaltaische und seine Gruppen, I-II. Berlin, F. Dümmler, 1885. 184 p. **Title tr.:** The Ural-Altaic [language] and its groups, I-II.

Contains a comparative grammar of the Ural-Altaic languages. Pts. 1-2 deal with the Finno-Ugric languages, and a pt. 3 is projected for the Samoyedic, Tungus, Turcic, and Mongolian languages.

Copy seen: DLC.

32947. WINKLER, HEINRICH, 1848-1930. Uralaltaische Völker und Sprachen. Berlin, F. Dümmler, 1884. 480 p. **Title tr.:** The Ural-Altaic peoples and languages.

Contains an anthropological and linguistic investigation of peoples, who

supposedly form a Ural-Altaic ethnic and linguistic branch.. Comparative notes on physical anthropology of Tungus, Samoyeds, Finns, Ostyaks, Lapps (p. 18-27), and many other peoples are compiled from literature. The much larger, linguistic part of the book gives specimens from the languages of the Finns (p. 75-102), the Yeniseians, Eskimos, Yukaghirs, Aleuts, Chukchis (p. 114-21), Lapps (p. 247-65), Ostyaks and Voguls (p. 265-307), Samoyeds (p. 373-96), Yakuts (p. 399-403), and Tungus (p. 425-36), which are compared with each other and with many other Asiatic and European languages. Special attention is given to the use of cases in these languages, and the formation and development of such cases as adessive, inessive, allative, illative, and others are investigated. The author divides the so-called Ural-Altaic languages into two groups: (1) The Mongolian-Turcic, and (2) the Finnish-Samoyedic-Tungusian-Japanese.

Copy seen: DLC.

32948. WINKLER, HEINRICH, 1848-1930. Zur Völkerkunde von Osteuropa. Breslau, Druck von Grass, Barth & Comp., 1912. 40 p. **Title tr.:** The ethnology of East Europe.

Contains a sketch of the language, anthropology and the external culture (dwellings and clothing) of the Finno-Ugric peoples, stressing the thesis that all these peoples belong to one typical cultural circle. Brief characterization of Zyryan (p. 9), Vogulian and Ostyakian (p. 10-12), and Lappish languages and cultures are given. Bibliographical notes are included.

Copy seen: DLC.

32949. WINTEMBERG, W. J. Eskimo sites of the Dorset culture in Newfoundland. (American antiquity, Oct. 1939. v. 5, no. 2, p. 83-102; Apr. 1940, v. 5, no. 4, p. 309-333, text map, 3 plates) 56 refs.

Contains description of Eskimo sites and artifacts of stone, bone, antler or ivory, discovered on the northern coast of Newfoundland in 1927 and 1929 by the writer and D. Jenness. The finds prove that the island once was inhabited not only by the extinct Beothuk Indians, but also by Eskimos. A detailed description of objects secured from the sites is given. All these sites must have been

abandoned before the arrival of Europeans, i. e. 1500 A. D. There are sufficient grounds for linking this culture with the "Dorset" Eskimos; in the Newfoundland sites however, it does not seem to be as well developed as in "Dorset" sites in the Arctic.

methods of vitamin A identification. (Society for Experimental Biology and Medicine. Proceedings, Aug. 1951. v. 77, no. 4, p. 825-29, 3 fig.)

Contains presentation of a method for identification and range evaluation of the biological potency of vitamin A. The method depends on the response of the skeletal structures of young animals to excessive vitamin A intake. It is simpler, more specific, and more rapid than other methods hitherto applied.

Copy seen: DLC.

WOLF, NIKOLAUS, see Hillenbrand, H. J., and N. Wolf. Endangitis u. Kälteschaden. 1950. No. 29642.

32957. WOLF, STEWART, and J. D. HARDY. Studies on pain. Observations on pain due to local cooling and on factors involved in the "cold pressor" effect. (Association for Research in Nervous and Mental Disease. Research publications, 1942, pub, 1943. v. 23, p. 123-42, 9 fig.) 24 refs.

Contains an account of over 50 experiments made with a standard cold stimulus. Temperature of the cooled hand, blood pressure, pulsation amplitude, degree of pain, effects of procaine and of sympathectomy, etc. were studied. Pain was found to be separate from the sensation of cold itself and is apparently mediated through small, non-myelinated fibers of class C. Its intensity, however, depends directly on the degree of cooling. The possible action of the cold stimulus is also discussed as well as the nature of the cold pressor effect.

Copy seen: DLC.

32958. WOLFF, HEINZ HERMAN OTTO. The mechanism and significance of the cold pressor response. (Quarterly journal of medicine, London, July 1951. New series, v. 20, no. 79, p. 261-73, chart, 3 tables) 50 refs.

Contains a review of the literature on the application of the cold pressor test for study of essential hypertension and a critique of the test as indicator of hypertension. On the basis of his own work, the author draws attention to the close association between the cold response and pain sensation, the former failing to appear when the latter is absent. It is concluded that the cold pressor test provides only a measure of sensitivity to a painful stimulus rather than of vascular reactivity.

Copy seen: DSG.

32959. WOLFF, HEINZ HERMAN OTTO, and E. E. POCHIN. Quantitative observations on vascular reactions in human digits in response to local cooling. (Clinical science, London, Sept. 1949. v. 8, no. 3, p. 145-54, 6 fig., 3 tables) 3 refs.

Contains description of a method, and results obtained with it in quantitative determining of vasodilator after-reactions occurring in recently-cooled fingers. Their magnitude increases with the decrease in temperature, and with duration of cooling, up to two hours and more and are not affected by circulatory arrest. They are characterized by vasodilatation lasting as long as two to three hours. The significance of these and related findings for the problem of histamine release and the pathogenesis of some cold injuries, is discussed.

32965. WOODWARD, FRANCES J.
Portrait of Jane; a life of Lady Franklin.
London, Hodder & Stoughton, 1951. 382
p. illus. ports., maps (incl. end paper).
81 refs.

Contains an account of Lady Franklin's
life, 1792-1875, gathered from her diaries
and correspondence and those of her
husband and niece, material now at the
Scott Polar Research Institute, Cam-
bridge, England. Two hundred journals
and nearly 2,000 letters were consulted.
Following an extensive account of Lady
Franklin's early life and interests, her
marriage to Sir John Franklin, travels in
the Mediterranean, and life in Van
Diemen's Land (Tasmania), three chap-
ters deal with Franklin's search for the
Northwest Passage and the subsequent
searches for his lost expedition. Later
chapters concern Lady Franklin's trips
to Hawaii, India, United States, etc.
The bibliography is grouped under: Bio-
graphy, Arctic, Hawaii, Tasmania, and
General. Map on endpaper illustrates
Franklin's last arctic expedition of 1845-
1847, and the Franklin search expedi-
tions, to 1859.

William Penny, 1809-92. (Polar record,
July 1953. v. 6, no. 46, p. 809-811, port.)

Contains sketch and appraisal of the
character and achievements of Capt.
Penny. A whaling captain, and a
"whaler" since the age of twelve, he
participated in the Franklin Search
during 1850-51, as leader of a British
Admiralty expedition in the brigs *Lady
Franklin* and *Sophia*. Penny's and its
companion expedition under Austin, were
the first to discover traces of the Franklin
expedition on Devon and Beechey Is-
lands. Altercations arising from this
voyage and other of Penny's activities,
also Lady Franklin's, Barrow's and other
contemporaries' views of him are cited.
Frequent quotations are made from
Penny's correspondence and papers re-
cently placed in the Scott Polar Research
Institute. *Copy seen:* CaMAI; DLC.

**32968. WORLD METEOROLOGICAL
ORGANIZATION.** The international
ice nomenclature. (*In its:* Commission
for Maritime Meteorology. Abridged
final report of the first session, London,
14th-29th July 1952. WMO no. 10,
RP 2, p. 42-50)

Contains (1) a summary of ice-terms
"grouped together under headings which
will guide the reader as to which terms
are available for describing kindred forms
of ice"; (2) definitions of the 71 terms,
arranged in alphabetical order. The
nomenclature is preceded by recom-
mendations for its adoption, translation,
and publication. *Copy seen:* DWB.

32969. WORLD OIL. Alaska. (*In:*
Atlas, pub. as section 2 of July 1948
issue, p. 57, col. map)

Describes developments in Alaskan
oilfields on the arctic coast, Alaska
Peninsula-Cook Inlet region, and the
Katalla and Yakataga districts in 1948
and previous years. *Copy seen:* DLC.

32970. WORLD OIL. Alaska. (*In its:*
International operations issue, July 15,
1949. v. 129, no. 4, p. 66)

Outlines plans for development in 1949
in the U. S. Naval Petroleum Reserve
no. 4 on the arctic coast near Barrow,
Alaska. *Copy seen:* DLC.

32971. WORLD OIL. Alaska. (*In its:*
International operations issue, July 15,
1950. v. 131, no. 2, p. 65)

Summarizes oil developments in 1949
in the U. S. Naval Petroleum Reserve
no. 4 on the arctic coast of Alaska.

Copy seen: DLC.

32972. WORLD OIL. Alaska. (*In its:* International operations issue, July 15, 1951. v. 133, no. 2, p. 149)

Active exploration for oil in Alaska in 1950 was still confined to the Naval Petroleum Reserve no. 4, on the arctic coast. No commercial production has yet been found in this area, but in 1950 two noncommercial oil productive areas were found. Operations in this reserve in 1950 are described. In oil fields on south coast of Alaska, individual lease holders were brought together in a unitized group to form a workable concession,—1,000 sq. mi. block leased.

32973. WORLD OIL. Alaska. (*In its:* International operations issue, July 15, 1952. v. 135, no. 2, p. 109)

Oil developments in 1951 in U. S. Naval Petroleum Reserve no. 4 on the arctic coast of Alaska, are described. Recoverable reserves of 30-100 million barrels were found in Upper Cretaceous sands of the Umiat anticline. Oil was also found in Upper Cretaceous well at Cape Simpson.

Copy seen: DLC.

32974. WORLD OIL. Alaska. (*In its:* International operations issue, Aug. 15, 1953. v. 137, no. 3, p. 132)

Describes 1953 developments in U. S. Naval Petroleum Reserve no. 4 on arctic coast of Alaska. U. S. Navy prepares to abandon work in this area. Phillips Petroleum Co. and U. S. Dept. of the Interior conclude negotiations on an exploration pact covering about a million acres in Yakataga and Katalla districts on the Gulf of Alaska.

Copy seen: DLC.

32975. WORLD OIL. Alaska oil field confirmed. (World oil, Dec. 1951. v. 133, no. 7, p. 302)

U. S. Navy confirms the existence of an oil field at Umiat on the Colville River, and of natural gas within Naval Petroleum Reserve no. 4, northern Alaska.

Copy seen: DLC.

32976. WORLD OIL. Alaska oil search to be accelerated. (World oil, Oct. 1950. v. 131, no. 5, p. 228, sketch map)

Describes developments in the U. S. Naval Petroleum Reserve no. 4, on the arctic coast of Alaska near Barrow.

Copy seen: DLC.

32977. WORLD OIL. Bids on Alaskan line open. (World oil, Oct. 1953. v. 137, no. 5, p. 316, illus.)

Contains a description of the proposed route of the 615-mile Haines-Fairbanks petroleum products pipeline.

Copy seen: DLC.

32978. WORLD OIL. Canada. (*Its:* Atlas, pub. as section 2 of July 1948 issue, p. 59, 61-63, col. maps)

Contains data regarding oil production at Norman Wells in the Mackenzie District in 1946 and 1947 and cumulative through 1947.

Copy seen: DLC.

32979. WORLD OIL. Helicopter surveys northern Canada. (World oil, Apr. 1951. v. 132, no. 5, p. 264-65, illus. incl. map)

Describes a geological survey by helicopter by the Associated Helicopters, Ltd., of Edmonton, Alberta, of a large area in southern Northwest Territories and adjacent parts of Alberta and British Columbia.

Copy seen: DLC.

32980. WORLD OIL. Search for oil pushed in the land of icebergs. (World oil, Apr. 1953. v. 136, no. 5, p. 290, 292, 296, text map)

Contains a description of the geology and oil occurrences and developments in the Katalla and Yakataga oil districts on the south coast of Alaska on the Gulf of Alaska, summarized from a 1951 report by D. J. Miller, q. v. Notes also that under a later exploratory agreement with the U. S. Dept. of the Interior, the Phillips Petroleum Co. is to drill 12 exploratory wells.

Copy seen: DLC.

32981. WORLD OIL. U.S.S.R. (*In its:* International operations issue, July 15, 1949. v. 129, no. 4, p. 203-214, maps)

Contains tabulated engineering and geologic data on U.S.S.R. oil fields in Europe and Asia, and lists of refineries and pipe lines.

Copy seen: DLC.

32982. WORLD OIL. U.S.S.R. (*In its:* International operations issue, July 15, 1950. v. 131, no. 2, p. 192, 194)

Contains tabulated engineering and geologic data on U.S.S.R. oil fields in Europe (including the Pechora area) and Asia, and lists of petroleum refineries in the U.S.S.R.

Copy seen: DLC.

32983. WORLD OIL. U.S.S.R. (*In its:* International operations issue, July 15, 1951. v. 133, no. 2, p. 218, 220)

Contains tabulated engineering and geologic data on U.S.S.R. oil fields, and lists of U.S.S.R. oil refineries in Europe and Asia.

Copy seen: DLC.

32984. WORLD OIL. U.S.S.R. (*In its*: International operations issue, July 15, 1952. v. 135, no. 2, p. 186-188)

Includes data on the Pechora oil-bearing area. **Copy seen:** DLC.

32985. WORLD OIL. U.S.S.R., European area. (*Its*: Atlas, pub. as section 2 of July 1948 issue, p. 249, col. map)

Includes data regarding oil occurrence and production in the Pechora region. **Copy seen:** DLC.

32986. WORLD PETROLEUM. Canada's 1952 wildcats 19.1 percent successful (World petroleum, May 1953. v. 24, p. 116-17, illus.)

Two small maps show the location of the sedimentary basin and the crown reservations and leases in western Canada (including the Northwest Territories). **Copy seen:** DLC.

32987. WORLD PETROLEUM. Canadian oil consumption rose 14 percent in 1951. (World petroleum, May 1952. v. 23, p. 76-77, illus. incl. map)

Map shows location of the refinery at Norman Wells, Mackenzie District, and its capacity (13,000 barrels). **Copy seen:** DLC.

32988. WORLD PETROLEUM. Navy to end Alaska exploration. (World petroleum, May 1953. v. 24, p. 176)

Exploration for oil in the U. S. Naval Reserve no. 4 at Point Barrow, Alaska, is being suspended. Further expenditure at this time reported beyond economic justification. The area will be kept as a reserve for possible future development. **Copy seen:** DLC.

32989. WORLD PETROLEUM. Oil refineries of the world. (*In its*: 22nd annual refinery issue, July 15, 1952. v. 23, no. 8, p. 115-116, +)

Brief notes on oil refineries in the U.S.S.R. **Copy seen:** DLC.

32990. WORLD PETROLEUM. Oil refineries of the world. (*In its*: 23rd annual refinery issue, July 15, 1953. v. 24, no. 8, p. 128, +)

Includes data on oil refining in U.S.S.R. **Copy seen:** DLC.

32991. WORLD PETROLEUM. Phillips to explore in Alaska. (World petroleum, Mar. 1953. v. 24, p. 136)

Under a development contract with the U. S. Government the Phillips Petroleum Company is to drill 12 explor-

atory wells over a period of ten years on a tract of nearly a million acres in the Katalla-Yakataga area in southern Alaska. **Copy seen:** DLC.

32992. WORSAAE, JENS JAKOB ASMUSSEN, 1821-1885. La colonisation de la Russie et du Nord scandinave et leur plus ancien état de civilisation; essai d'archéologie préhistorique comparative. (Nordiske oldskrift-selskab, Copenhagen. Mémoires de la Société royale des antiquaires du Nord. nouv. sér. 1873-74, p. 73-198, illus.) Also issued separately (122 p.) **Title tr.:** Colonization of Russia and northern Scandinavia and their most ancient state of civilization; a contribution to comparative prehistoric archeology.

Translated by E. Beauvois, from the original Danish paper abstracted below. **Copy seen:** DLC.

32993. WORSAAE, JENS JAKOB ASMUSSEN, 1821-1885. Ruslands og det skandinaviske nordens bebyggelse og ældste kulturforhold; bidrag til sammenlignende forhistorisk archaeologie. (Aarbøger for nordisk oldkyndighed og historie, 1872. p. 309-430, illus.) Also pub. in French translation (item above). **Title tr.:** Colonization of Russia and northern Scandinavia and their most ancient state of civilization; a contribution to comparative prehistoric archeology.

Contains an archeological study and an attempt to solve some crucial problems, e. g.: who were the inhabitants of northern Europe at the beginning of stone age, perhaps Lapps or Finns; what other races came at the end of the stone age, bringing a more advanced civilization; who brought the use of bronze and iron to northern Europe, etc. The following archeological ages and periods are treated: the mammoth period, or the most ancient stage of the stone age, the reindeer period, the period of megalith graves, the bronze age, and the iron age in its two divisions. Many archeological objects of those periods, found in Scandinavia, European Russia and Siberia are described, investigated and compared with similar objects found in Ireland, Italy and Greece. The author rejects the theory that the Finns or Lapps were the last descendents of Scandinavian aborigines, that once they were disseminated to southern Europe and later driven back to the far North. He also

rejects theory that the Scandinavians came from Russia. *Copy seen:* DLC.

32994. WORTHINGTON, L. V. Oceanographic results of Project Skijump I and Skijump II in the polar sea, 1951-1952. (American Geophysical Union. Transactions, Aug. 1953. v. 34, no. 4, p. 543-51, 3 text maps, tables, graph) 6 refs.

Oceanographic work during Apr.-May 1951 and Mar. 1952 in seas north of Alaska and the Canadian Arctic Islands is described. Eight hydrographic stations were made on the ice. The technique of making these stations from aircraft is discussed. Work of previous oceanographic expeditions is summarized. The various layers of water in the Arctic Ocean (the North Polar, Atlantic, and Polar Deep water) are discussed as to origin, temperature, and circulation. A large anticyclonic eddy was observed north of Alaska which complicates Nansen's cyclonic system of polar sea circulation. "Some evidence is produced of the existence of a submarine ridge* running across the center of the North Polar Basin," from Ellesmere Island to the New Siberian Islands, separating the deepest water of Beaufort Sea from the rest of the Basin. Maps show routes of previous expeditions, salinity of the surface layer of the sea, and Atlantic water circulation in the Arctic Basin. Hydrographic station data are presented in table. *Copy seen:* DGS.

32995. WRIGHT, HERBERT EDGAR, Jr., 1917- . Glacial history of the Mentasta Mountains, southeastern Alaska Range. (Geological Society of America. Bulletin, Dec. 1953. v. 64, no. 12, pt. 2, p. 1495)

Contains abstract of a paper presented at the Nov. 1953 meeting of the Society, Toronto, Canada. Glacial history of the Mentasta Mts. differed from that of central and western Alaska Range (which had a series of local glaciations). The main event was an invasion of ice from the Wrangell Mts. (60 mi. south), preceded and followed by extensive local glaciation. *Copy seen:* DGS.

32996. WRIGHT, IRVING SHERWOOD, 1901- , and E. V. ALLEN. Frostbite, immersion foot, and allied conditions. (Army medical bulletin, Jan. 1943. no. 65, p. 136-50) 19 refs.

Contains an introduction on losses due to cold in military campaigns, followed by survey of causes and symptoms of frostbite and trench foot (mild frostbite), and of factors other than cold contributing to such injuries (humidity, wind, malnutrition, bad clothing, etc.). Classification and treatment of frostbite, treatment of trench foot sequelae and prophylaxis are given.

Copy seen: DLC.

32997. WRIGHT, JOHN KIRTLAND, 1891- . The open polar sea. (Geographical review, July 1953. v. 43, no. 3, p. 338-65, illus., map) 42 refs.

Contains an historical summary of the now-discarded theory which found support from the period of the opening of ocean trade routes in the 16th century, until the latter part of the 19th century, when the experience of Hall (*Polaris*), Nares, De Long (*Jeannette*), and finally Nansen (*Fram*), 1893-96, proved that the polar sea was not open water. The author discusses in turn arguments based upon physical features such as the distribution of land and water, reports of open water, climate, and oceanography, those based upon biological evidence, and finally the "motives for, and nature of, the arguments." Excerpts from reports and writings of contemporary seamen, explorers, and scientists are quoted. *Copy seen:* DLC.

32998. WUNDT, WALTER. Eiszeiten und Warmzeiten in der Erdgeschichte. (Deutscher Geographentag, München, 1948, *pub.* 1950. Bd. 27, Heft 5, p. 114-

19) **Title tr.:** Glacial periods and warm periods in the history of the earth.

Contains an attempt to explain the occurrence of glacial and warm epochs by purely terrestrial forces or changes, especially in the sea and air currents. Thus e. g., during the Tertiary, the Arctic was connected by a wide arm with the warm Tethys sea, which explains the warm climate of the Arctic in those times. On the other hand, an interruption of warm currents to the Arctic can account for the spread of glacial conditions in this area. Some secondary and additional factors are also considered.

32999. WUSTMANN, ERICH, 1907- . In Lappzelt und Rentierpulk. Stuttgart, K. Thienemann, 1948. 93 p. illus., map. **Title tr.:** In Lapp tent and reindeer pulk.

Contains an account, written for young people, of the Karasjok Lapps. The seasonal migrations of the Lapps, their life in the open and its hardships, especially as it affects the young and the children are stressed. The author spent more than two years (1934-36) in Swedish Lapland, Finnmark, and Lappi, to study the life of the nomadic Lappers and to make recordings of their songs for the "Staatliches Phonogramm Archiv" of Berlin. He visited Suonikylä and Petsamo in northern Finland in Sept. 1935, and made a trip of 600 km. by "pulk" or sleigh to Karasjok, a Lapp center in Finnmark. 25 photographs of the Lapps, their dwellings and activities are included.

Contains a study on African and white subjects under conditions of comfort, extreme heat, and cold (38° to 40° F.) combined with a wind of 1000 ft./min. Conditions at both rest and at standardized rates of exercise were examined.

Copy seen: DSG.

33002. WYNDHAM, C. H., and D. K. C. MacDONALD. Human immersion and survival in cold water. (Nature, London, Apr. 21, 1951. v. 167, p. 649-50) 5 refs.

Contains an account on experiments with human subjects and with a physical model, demonstrating the relative thermal independence of superficial and deep tissues, and the presence of a resistance to heat flow from the deep to the superficial tissues. The implications of these findings to cases of submersion in arctic waters, are outlined.

Copy seen: DLC.

33003. WYNDHAM, C. H., and W. G. WILSON-DICKSON. Physiological responses of hands and feet to cold in relation to body temperature. (Journal of applied physiology, Sept. 1951. v. 4, no. 3, p. 199-207)

Contains a report on observations during exposures at sea to ambient temperatures down to -12° C. with winds of 6 to 40 knots. Subjects in full protective dress exposed for three hours showed marked cooling of hands and feet during rest periods, with a slight cooling of the body. After cooling to a point of discomfort, hands and feet consistently rewarmed when body heat content was restored through light physical work. This suggests a reflex control of blood flow on extremity temperature. Short exposures showed a similar response.

33004. WYNNE-EDWARDS, VERO COOPER. Freshwater vertebrates of the Arctic and Subarctic. Ottawa, 1952. 28 p. illus., text map. (Canada. Fisheries Research Board. Bulletin no. 94) 56 refs.

Contains discussion of fishes and lampreys, amphibians, and mammals. Physical conditions of arctic lakes and rivers are briefly described. The following families are included under lampreys

and fishes: (1) lampreys; (2) sturgeons; (3) salmon, trout, and char; (4) whitefish, ciscoes, etc.; (5) graylings; (6) smelts; (7) suckers; (8) minnows; (9) Alaska blackfish, etc.; (10) pike; (11) trout-perch; (12) perch, pike-perch; (13) sculpins or bullheads; (14) sticklebacks; (15) ling, burbot or methy. Amphibians include only the northern wood frog and the northern swamp tree frog, and mammals only the white whale or beluga, ringed seal, and harbour seal. Under each family, occurrences and habits are briefly described. Locations noted are mainly in Canada with lesser mention of Alaska, U. S. S. R., and Scandinavia.

Contains the result of observations made by the author and Alexander Anderson May 24-Aug. 1950, at Clyde Inlet, the Cape Searle Island fulmar colony, Frobisher Bay airfield, and other camps of the main expedition. Some observations made by the author during an expedition to Frobisher Bay with Comdr. Donald B. MacMillan, July-Aug. 1937, are included. "Camp B" at the head of Clyde Inlet is described. A systematic list of 40 species of birds seen there and at the other localities mentioned, is given, with descriptive notes, measurements, data on the biology, life habit and local distribution. "Camp B" was found to be biologically rich compared with the adjacent coastal belt and interior. **Copy seen:** CaMAI; MH-Z.

33008. YOSHIMURA, H., and T. IIDA. Studies on the reactivity of skin vessels to extreme cold, I. A point test on the resistance against frost bite. (Japanese journal of physiology, Aug. 1950. v. 1, no. 2, p. 147-59, illus., tables) 7 refs.

Contains description of a method devised "to determine the temperature reaction to cold," and to compare the reactivity of subjects by evaluating the "resistance index of frost bite." Seasonal variations were found in the temperature reaction in the same subject, and are attributed to changes in environmental temperature and acclimatization.

Copy seen: DSG.

33009. YOSHIMURA, H., and T. IIDA. Studies on the reactivity of skin vessels to extreme cold, II. Factors governing the individual difference of the reactivity, or the resistance against frostbite. (Japanese journal of physiology, Feb. 1952. v. 2, no. 3, p. 177-85, illus., tables) 10 refs.

Contains a study of individual differences in reactivity of skin vessels to cold. The reaction was detected a few days

after birth; develops fully in a short time, but decreases during puberty and old age. Country of origin and "racial specificity" show an intimate relation with the reactivity, the main factor being "the effect of training to cold." Among the peoples of Manchuria, the Orochons, leading a nomadic life in a cold country, had the highest reactivity; recently-immigrated Japanese the lowest. Internal factors possibly causing differences in reaction are also discussed. **Copy seen:** DSG.

33010. YOSHIMURA, H., and others. Studies on the reactivity of skin vessels to extreme cold, III. Effects of diets on the reactivity of skin vessels to cold. (Japanese journal of physiology, July 1952. v. 2, no. 4, p. 310-15, illus., tables) 6 refs. *Other authors:* T. Iida, and H. Koishi.

Daily intake of excessive dietary protein accelerated the reaction to cold after about a week, and maintained it thereafter; low protein diet showed no effect even after two weeks. Excessive intake of salt increased the reactivity in about a week; low intake decreased it. The application of the findings for prevention of frostbite are discussed.

33011. YOU, ROSEMARY W., and E. A. SELLERS. Increased oxygen consumption, and succinoxidase activity of liver tissue after exposure of rats to cold. (Endocrinology, Sept. 1951. v. 49, no. 3, p. 374-78, 2 tables) 14 refs.

Contains a study on adult rats exposed to a low temperature (1.5° C.) for periods over 16 days. Oxygen consumption of liver slices and succinoxidase activity of liver homogenates were significantly increased in these animals, as compared with controls. These findings confirm directly earlier indirect evidence of the increased metabolic activity of visceral tissues in animals exposed to cold.

33012. YOU, S. S., and others. Effect of thyroidectomy, adrenalectomy and burning on the urinary nitrogen excretion of the rat maintained in a cold environment. (Endocrinology, Sept. 1950. v. 47, no. 3, p. 156-61, illus., tables) 12 refs. *Other authors:* R. W. You, and E. A. Sellers.

In a cold environment (1.5° C.) rats excreted 77 percent more urine nitrogen

than at room temperature (25° ± 2°); doubling of the food intake of these animals further increased the nitrogen output to 2.3 times its original value; increase of body weight, however, was slow. Increase in urinary nitrogen due to cold occurred in both thyroidectomized and DCA-injected rats. The effects of a mild burn plus cold exposure on urinary nitrogen excretion were cumulative and apparently greater than the sum of the stimuli acting independently. The possibility that a different mechanism is involved in the increased protein catabolism after burns and during cold exposure, is discussed.

Title tr.: The five-year plan of harbor surveying and marine service in the Far East and the North.

Contains an outline of the five-year plan of harbor building and extension; improvement in river navigation; shipbuilding, etc. Planned surveys are noted for the mouths of the Indigirka, Kolyma, Yana, Lena and Khatanga, for the gulfs of the Ob' and Yenisey, and for Pechora bay. Building of ships for the arctic seaways and of ice-breakers, etc., is mentioned.

33020. ZAKLINSKAIA, E. D. Sporovopyl'sevoi spektr bezlessnoi zony. (Priroda, 1953, no. 7, p. 94-97, illus.) **Title tr.:** Spore-pollen spectrum of the woodless zone.

Deals with the spore and pollen method introduced not long ago into the study of paleobotany. This new method was successfully applied by B. A. Tikhomirov in his investigation of the vegetation of the mammoth epoch, when a carcass of this fossil animal was found in 1949 in tundra on Taymyr Peninsula. The author explains the use of this method and discusses the vegetation of Taymyr Peninsula in the mammoth epoch on the basis of spore-pollen spectra prepared by Tikhomirov.

Contains description of this Samoyedic people, 349 persons in 1894, nomadizing in the taiga around the Sayan Mts., and in a region of about 12,000 sq. versts between 52°-56° N. and 62°-72° E. Based chiefly on literature, a description is given of their social organization (five sibs, each having an elected chieftain, *dargu*), and physical appearance (measurements taken on 40 persons, table 1). Details are supplied on rearing of children, dwellings, the breeding of reindeer, dogs and horses, on clothing and ornaments, food and cooking, hunting of sables, religion and shamanism, folk songs (some specimens given in Russian), musical instruments, folk tales, etc. Wedding and funeral customs, shamanistic performances, the shaman's costume and drum are described; finally some discussion of the economic situation which deteriorates year by year and the health conditions: small-pox, syphilis, and dysentery in summer. In 1882, there were 120 Karagas families (tents), in 1894 only 86: a rapidly dying-out people.

Title tr.: Salmon of the Kola Peninsula and tasks in connection with its reproduction.

A paper delivered to the Conference on reproduction of fish resources, held in Leningrad in March 1950. The salmon fisheries are located throughout all Kola coastal areas of Barents and White Seas; their catch reached 7,434 hundredweight in 1937, and has since declined. The habits of the salmon (true salmon, *Salmo salar*) and its seasonal migrations are described; the unfavorable effects of hydroelectric constructions and logging are noted; measures for protection of reproduction, among them the restriction or prohibition of catch in the rivers (since 1938), construction of special fishways at hydroelectric stations (as on the Tuloma River), and the artificial reproduction of salmon in special hatcheries (on Varzuga River) are discussed.

33045. ZELENIN, DMITRIĬ KONS-TANTINOVICH, 1878- . Ideologiiia Sibirskogo shamanstva. (Akademiia nauk SSSR. Otdelenie obshchestvennykh nauk. Izvestiia, 1935. ser. 7, no. 8, p. 709-774) about 120 refs. **Title tr.:** The ideology of Siberian shamanism.

Contains an attempt at explanation of the psychology and origin of shamanism. The animistic theories of V. G. Bogoraz and L. I. A. Shternberg are discussed. Zelenin considers the healing of the sick as the shaman's chief function. The shamanistic healing process is analyzed: an animal (spirit) intrudes into man's body and makes him sick; the shaman takes it away by sucking, swallows it, or disposes of it in a deserted place. The social functions of a shaman are analyzed and two periods of development established: the shaman in the primitive classless society depended entirely on his own ability (the spirits were not yet differentiated into good and bad, weak and powerful ones), and in a later stage when the human society was divided into classes, the shaman acquired his protective spirits which helped him to conquer the evil spirits. All the Siberian peoples are referred to in the course of the paper.

Mezhdunarodnaya assotsiatsiya po izucheniyu chetvertichnogo perioda Evropy. Trudy Sovetskoy sekcii, 1937. vyp. 3, p. 81-106, 7 text illus., 2 plates) 25 refs. **Title tr.:** Archeological investigation on the shore of the Arctic Ocean.

Contains an evaluation of discoveries made in 1935 on the Rybachiy Poluostrov. Three paleolithic sites with numerous unpolished artifacts of quartz were discovered on both sides of the Bol'shaya Motka Guba. The terrain of two sites belongs to the *Pholas* transgression, and that of the third site at the Morosovaya River, to the *Littorina* transgression. The sites, however, are evidently of a later date than the geological age of their terrain: the objects, found *in situ*, belong to Finnmark's "arctic paleolithic." Another group of three sites, found in the same region of the Kola Peninsula, belong to the late neolithic or Brøgger's "arctic stone age;" from pollen analyses, they may be dated as between 700-800 and 1500-2000 B. C. Similar finds were made also in Karelia at Medvezh'ya Gora. A third group of discoveries were the so-called "Lapp pits" (similar to the semi-subterranean Lapp dwellings discovered by Tanner near Petsamo). The sites, their exploration and the objects found are described and illustrated in this paper. The field work was headed by the writer with assistance of P. Tret'akov. Summary in German, p. 103-106.

33048. ZEMLIAKOV, B. F. Arkticheskii paleolit na Severe SSSR. (Sovetskaya arkheologiya, 1940, no. 5, p. 107-143, 3 text illus., 4 text maps, diagr., tables, 8 plates) About 30 refs. **Title tr.:** The arctic paleolithic in the North of the U. S. S. R.

Contains a review of Finnmark's Komsa culture and an account of the field work of an archeological and geological expedition in 1935 and 1937 to the Rybachiy Poluostrov. Organized by the Soviet section of the International Association for Study of the Quaternary Period, and the Institute of the History of Primitive Society (at Marr's Academy of the History of Material Culture), the expedition comprised the author (leader), P. Tret'akov and three geologists. The party discovered three paleolithic sites in 1935, and another nine in 1937, which are of the same type as Komsa sites in Norway. The work on each of the twelve

sites and the objects found there are described. They consist of massive tools and implements of red quartzite, archaic in form; also smaller objects such as flakes, burins and scrapers of quartz, arrow points of slate, awls of quartzite, hornstone and flint, etc. (see plates). The objects were found on the surface and *in situ*. These arctic paleolithic sites on Rybachiy Peninsula, all found at the crest of ancient shore lines, are attributed, from geological evidence to the period of the *Pholas* marine transgression, thus contemporary with ancient paleolithic sites in southern parts of the Baltic countries. Summary in French, p. 141.

Contains data on whales killed and oil produced annually 1932-46 by the

whaling fleet Aleut, operating in the North Pacific, Bering and Chukchi Seas, a total of 5,793 whales and 33,785 tons of oil in the 15-year period. The number of killed whales is compared with data on Japanese and U. S. whaling in these areas. The whale stocks in North Pacific herds are estimated, and whaling methods discussed. It is concluded that Soviet whaling may easily increase its annual take to 1,500 whales.

33055. ZENKOVICH, B. A. Kitobolnyy promysel v DVK. (Priroda, 1938, no. 6, p. 96-101, illus.) **Title tr.:** Whaling in the Far East region.

Contains a summary of the author's diary kept during his work on the whaler Aleut in 1936, from Vladivostok to Chukchi Sea. Various kinds of whales, and conditions of whaling in the Bering and Chukchi Seas are noted; observations made on the biology, ecology and life habits of whales; the use of amphibian aircraft for reconnaissance is discussed. Appended is a table of statistical data for 1932-36 on various kinds of whales killed.

Copy seen: DLC; MH.

33056. ZENKOVICH, B. A. Novyy ob'ekt kitobolnogo promysla v dal'nevostochnyykh morakh. (Priroda, 1939, no. 2, p. 77-82, illus.) **Title tr.:** A new object of whaling in the Far Eastern seas.

Contains notes on characters and habits of the bottlenose whale (*Hyperoodon rostratus*) common in the Far Eastern seas during March to November. Detailed descriptions are given of two specimens killed in 1933 and 1936 in Kronotskiy Bay of the Bering Sea. Dimensions are given (in table) of 11 specimens killed by the crew of the whaler Aleut in 1933-36.

Copy seen: DLC; MH.

33057. ZENKOVICH, B. A. O kosatke ili kite-ubifse, *Grampus orca* Lin. (Priroda, 1938, no. 4, p. 109-112, illus.) **Title tr.:** On *Grampus orca* Lin., or the killer whale.

Contains data on the biology, ecology and life habits of the killer whale (*Grampus orca*), based on observations in Bering and Chukchi Seas during the author's work on whaling ships in 1931-1936. Its damage to the herds of walrus and even to other kinds of whales is stressed. A table of its dimensions is appended.

Copy seen: DLC; MH.

33058. ZENKOVICH, B. A. O sel'diānom kite ili finvale dal'nevostochnykh morel, *Balaenoptera physalus* Lin., 1758. (Priroda, 1938, no. 6, p. 123-26, illus.)

Title tr.: On the finback whale, *Balaenoptera physalus* Lin., 1758, of the Far Eastern seas.

Contains observations on external characteristics (table 1), abundance (table 2), migration, reproduction, food, parasites, and habitat of the finback whale in the Bering, Chukchi and Okhotsk Seas, based on the observations during the whaling trips in 1932-36; excerpted from the report of TINRO in 1936.

Izvestiia, Sept.-Oct. 1953. t. 85, vyp. 5, p. 598-603, illus., sketch maps) 5 refs. **Title tr.:** Some observations on the morphology of lower parts of small rivers on the low-lying coasts of Kamchatka.

Contains hydrogeomorphological characterization of the small river mouths of an unidentified part of the Kamchatka coast. Long and narrow, manifold, silt and sand accumulations, formed by sea currents and waves, and running parallel to the coast, bar the course of small rivers. The latter lacking force individually to break out through these impediments flow along the coast. Only after the waters of several such streams are united, can they pierce the sand bars and open a common outlet into the sea. Based on the author's investigation in 1946, using in part air-visual and air-photographic methods.

Contains in the general part (p. 3-163) a systematic index, characteristics, morphological sketch of the classes Gastropoda and Bivalvia, data on ecology. Geographic distribution is given, with a table for that of 266 species in various regions of the U.S.S.R., including the basins of the Arctic Ocean and North Pacific. History of the fauna is outlined and its importance indicated: for pearls, and mother-of-pearl used in the button industry, etc., for food, also as intermediary hosts of some parasitic worms; methods of study and a bibliography complete this section. In the systematic part (p. 164-359) are tables for the determination of classes, subclasses, families, genera and species, followed by descriptions of about 300 species (five are described as new), with dimensions, and data on variation, habitat, geographic distribution and fossil deposits. Indexes of Latin and Russian names are appended. Many species native to northern regions of the U.S.S.R. are included.

"Experiences on Vorkuta (Arkhangel'skaya Oblast') and Noril'sk (Krasnoyarskiy Kray) railroads during snowstorms indicate that snowdrifts can form on relatively level terrain and block railroad traffic. The snowstorm period lasts 7-8 months and maximum frequency and intensity occur in April. Snowdrifts up to 17 m. high and 60 m. long are frequently found along railroad embankments and on the windward side of buildings. Portable snow fences 5.5 m. high, placed up to 120 m. from the roadbed and raised following each storm controlled snowdrift formation successfully. It is estimated that each running meter of snow fence on the Noril'sk railroad retained about 900 cu. m. of snow each winter."

A monographic study of the distribution of marine and fresh-water Cumacea, covering (among other regions) the western Arctic and North Atlantic (p. 230-41, tables 1-3); the European boreal region (p. 241-46, table 4); Eastern Arctic and Pacific, their interrelation and circumpolar distribution (p. 257-60, table 9). Distribution of genera and families is presented (p. 277-91, table 16). Then follows a characterization of various regions by their Cumacea fauna, including (p. 299-300) the Arctic, sub-Arctic and the boreal zone.

Copy seen: MH-Z.

33091. ZIMMERMAN, JOHN S. Arctic airborne operations. (Military review, Aug. 1952. v. 32, no. 5, p. 23-30, illus., table)

"Overland movement in arctic regions is restricted by swamps during the summer and by low temperatures, snow and ice, and absence of roads and trails during the winter. Air transportation is facilitated in winter by good flying conditions and the use of frozen water surfaces as landing fields. Operations include establishing, reinforcing and protecting airfields, bases, meteorological stations, harbors, communications centers, and weather, radar and airway stations. Training and air-transportable equipment are discussed. Snowmobiles, Weasels, cargo sleds and tractors are used in place of wheeled vehicles. Airborne operations in the Arctic do not involve new tactical principles, but their application is more difficult. Special considerations in planning operations include aerial photographic reconnaissance, the use of frozen water surfaces as landing fields, determining snow depth, drifts, and prevailing wind direction, and establishing landing fields at elevations not exposed to early morning fogs."—SIPRE.

Contains notes referring to literature on the Zyryan anthropology, stressing the facts which still must be checked; description of the Zyryan type from Izhemsk; notes on religious beliefs and family life. **Copy seen:** DLC.

33103. ZOLOTAR', M. L., and A. S. SAKHAROV. Murmanit, novoe poleznoe iskopaemo Lovozerskikh tundr. (Redkie metally, 1936. god 5, no. 2, p. 37-39) **Title tr.:** Murmanite, a new mineral of the Lovozerskaya Tundra.

Contains a description of physical and chemical properties of murmanite. Its hardness is 2-3, specific weight 2.84, color purple; and its most important components are silicon dioxide (30 percent) and titanium dioxide (38 percent). Chemical analysis discovered tantalum and niobium pentoxides. Murmanite-bearing rocks are foyaites, urtites and luyavrites. Murmanite occurs in the Strashempakhk, Engpor and Nimehurt mountains, Kola Peninsula.

33104. ZOLOTAREV, ALEKSANDR MIKHAILOVICH, 1907- Nove dannye o tungusakh i lamutakh XVIII veka. (Akademiia nauk SSSR. Institut istorii. Istorik-Marksist, 1938. kn. 1 (65), p. 63-88). 35 refs. **Title tr.:** New contributions on the Tungus and Lamuts of the 18th century.

Contains evaluation of the ethnographic works of Jakob Lindenau,

interpreter and copyist with the second Kamchatka (Bering) expedition in 1739. He accompanied Fischer to Surgut, and later traveled with Müller from Tobol'sk to Berezov and back; in 1740, he traveled with Fischer from Tobol'sk to Yakutsk, and in Sept. 1741, they reached Okhotsk where Lindenau stayed until July 1743, and wrote his two papers: (1) "Beschreibung der Peschie Tungusen oder sogenannte Lamuten zu Ohot 1742 d. 1 Martii", and (2) "Beschreibung der Koracken ihre Sitten und Gebrauchen, welche unter ihnen selbst gesehen und durch Nachrichten erfahren 1743" (*tr.:* (1) Description of the Peshie Tungus or so-called Lamuts at Okhotsk, March 1, 1742; (2) Description of the Koryaks, their manners and customs which were personally observed or obtained from accounts, 1743). A third paper "Beschreibung der Tungusen, welche zu Udskoi Ostrog sind und sich in den gegend aufhalten" (*tr.:* Description of Tungus residing in Fort Udskoy and vicinity) was written by him in 1744-45 at Udsk. In 1786 he sent to the Academy in Leningrad another paper from Irkutsk: "Opisannie ob Amure-reke" (*tr.:* Description of the Amur River). All his papers, never published, were preserved in the archives of the Academy in Leningrad. Of Lindenau's life little is known; probably a Baltic German, he knew the Russian, German, Latin, Estonian, Livonian and Finnish languages; in 1790 he was still alive in Irkutsk, about 91 years old, deaf, and poor as a beggar.

Zolotarev here investigates Lindenau's manuscripts on the Lamuts of Okhotsk and the Tungus of the Udsk region, described after Müller's questionnaire. The mss. (equivalent to 230 type-written pages), written in a poor style and often difficult to understand, contain material of no less importance than the works of Steller and Krasneninnikov. Excerpts from Lindenau's first mss., with Zolotarev's comments refer to Lamuts around Okhotsk, their dwellings and clothing, boats, food, bird-hunting and fishing, family and social life, burial and beliefs on the dead, shamanistic practices, and two legends on the origin of the world. The mss. on the Tungus of the Ude River also contains notes on their social organization, reindeer breeding, hunting implements and weapons, their marriage and family life, burial, folk beliefs, etc. Lindenau's statements are compared with data collected by his

contemporaries and by recent ethnographers.

33105. ZOLOTAREV, DAVID ALEKSEVICH, 1885-, editor. *Ėtnicheskiĭ sostav naseleniia sev.-zap. oblasti i Karel'skoi ASSSR.* Leningrad, 1927. 119 p. incl. map, 54 tables; 3 fold. col. maps in pocket. (Akademiia nauk SSSR. Komissiiu po izucheniiu plemen-nogo sostava naseleniia SSSR i sopredel'-nykh stran. Trudy, t. 12) **Title tr.:** The ethnic composition of inhabitants of the northwestern province and of the Karelian A.S.S.R.

Contains analysis and tabular statistics based on the censuses of 1897 and 1920. On the Kola Peninsula, among the more numerous Russian and Finnish population in 1920, there were 1,502 Lapps (2,289 in 1897), 557 Zyryans (116 in 1897), and 106 Samoyeds (35 in 1897). Fold. maps (scale 1:1 million) show the distribution of nationalities on Kola Peninsula, and in Karelia; text map on p. 5 shows the density of population in both regions.

Copy seen: DLC.

33106. ZOLOTAREV, DAVID ALEKSEVICH, 1885-, editor. *Karely SSSR. Po antropologicheskim dannym avtora, statisticheski obrabotannym A. K. Shtamm.* Leningrad, 1930. 124 p., 80 tables (incl. fold.), 25 diagrs., text map, 33 plates. (Akademiia nauk SSSR. Komissiiu ėkspeditsionnykh issledovaniĭ. Materialy, vyp. 24, seriia severnaia) 53 refs. **Title tr.:** The Karelians of the U.S.S.R. Author's anthropological data worked up statistically by A. K. Shtamm.

Well-documented monograph on the physical anthropology of the Karelians, based on the author's investigations made during 1921-1930. Measurements of 1008 adult males and 225 females are evaluated: their pigmentation, height, torso and extremities, head and face, blood groups, and correlation of these characters are discussed. The Karelian population in the U.S.S.R. in 1926 was 247,453, of which only 100,781 lived in the territory of Russian Karelia, where they represented 37.4 percent of the total population (the other Karelians live mostly in the government of Tver). Racial characterization of the people is given: the Karelians mostly belong to the two racially mixed variations, or the Finnish-Karelian and Russian-Karelian types. The Nordic race is apparent in 2.3 percent of the Karelians, and the

East Baltic race in 10.9 percent. The dark (brown) complexion found in 3.6 percent of the men and 5.8 percent of the women is attributed to influence of the Lapps (whose settlements were found in Karelia up to the 17th-18th centuries), and to the North-Uralian or Ugrian influence. The Russian racial influence is strong. Plates give some 60 photographs of Karelian types. Summary in French, p. 116-23. **Copy seen:** DLC.

Trudy, 1928, t. 15, Finnougorskiĭ sbornik, p. 1-26) 91 refs. **Title tr.:** Survey of Russian anthropological works on the Finno-Ugrian population of the U.S.S.R.

Contains critical review of works published by the Russian scholars on the physical anthropology of the Finno-Ugrian peoples: Voguls, Ostyaks, Zyryans, Lapps, Karelians, Finns proper, and others.

Copy seen: DLC.

33109. ZOLOTAREV, DAVID ALEKSEVICH, 1885-. *V severo-zapadnoi Karelii.* (Akademiia nauk SSSR. Komissiiu po izucheniiu plemen-nogo sostava naseleniia SSSR i sopredel'-nykh stran. Trudy, 1930, t. 16, Zapadnofinskiĭ sbornik, p. 1-21, 4 illus., 8 plates incl. sketch map) Also pub. in *Karel'skiĭ sbornik*, 1929. **Title tr.:** In northwestern Karelia.

Contains the narrative of a five-man expedition in the summers of 1926 and

1927, led by the author, sponsored by the Karelian Administration, and organized by the Russian Academy of Sciences. The greater part of trip each year was made up the River Kem' to Sudnozzero (65° N. 30°20' E.) thence (in 1927) south to beyond Kimas-ozero, and in 1926 going north to Tikhtozero. The regions around Ukhta, Voknavolok and Tikhtozero (see map on p. 3) in particular were explored for folklore, especially old epic songs, and the party succeeded in writing down some 1,700 lines. The daily life of the present-day Karelians is described, their occupation and technique. Information on the rivers and lakes of the region, and 14 photographs are included. A summary of previous work in the area introduces this report.

33114. ZUBOV, NIKOLAI NIKOLAEVICH. Geograficheskoe sravnenie nashikh morei. (Geografiia v shkole, 1953. no. 1, p. 14-19) *Title tr.:* Geographical comparison of our seas.

The coasts and fiords of the Murman, Spitsbergen, Zemlya Frantsa-Iosifa, Novaya Zemlya and Severnaya Zemlya are described. The glaciers of Spitsbergen, Zemlya Frantsa-Iosifa, the north-

ern island of Novaya Zemlya and Severnaya Zemlya, are noted as the source of icebergs in Barents, Kara and Laptev Seas. Lyakhovskiy and Novosibirskiy Islands consist of fossil ice, permafrost and a thin layer of top soil, with coastal cliffs 35-40 meters high. Many small islands have been disappearing, e. g. Semenovskiy and Vasil'yevskiy in Laptev Sea mapped in 1823, "melted away" in 1948. The White, Kara, Laptev, Vostochno-Sibirskoye, Chukchi, Okhotsk and Bering Seas are practically ice-covered in winter, and the White, Bering and Okhotsk Seas entirely ice-free in summer. Peculiarities of tides, surface-water, and temperature and salinity are noted as well as the fishing industry.

33115. ZUBOV, NIKOLAI NIKOLAEVICH. O poverkhnostnykh techeniakh okeanov i morei. (Geografiya v shkole, Jan.-Feb. 1952, no. 1, p. 5-18, 6 fig.) *Title tr.:* On surface currents of oceans and seas.

Includes (p. 17-18) account of the Spitsbergen branch of the Gulf Stream, a warm current whose influence keeps the West Spitsbergen coastal waters ice-free in winter to 80° N. lat. The Arctic, East Greenland and Baffin Currents are cold currents, heavily laden with pack ice which melts only below the southern part of Greenland. The East Greenland Current consists of three streams, in the central one the station *Severnaya Polius* and the ice-breaker *Georgiy Sedov* drifted. The speed of the East Greenland Current at 81° N. lat. is 3-3.5 km. in 24 hours. It is estimated that from 15 to 20 percent of the entire ice-covered area of the Arctic Basin flows annually into Greenland Sea. The greatest number of icebergs in Baffin (Labrador) Sea, occur in May, when south of 48° N. lat. They average 140.

"The thickness of sea ice depends upon the number of degree-days of below 0° C. temperatures, the snow cover, and the melting rate. It was calculated that the maximum thickness does not exceed 23.8 m. under ideal conditions. The thickness of sea ice is not uniform during the first ten years of growth. The thickness be-

comes more uniform and its upper surface relatively smooth due to summer thawing of hummocky ice and winter filling of crevices with snow. The growth of ice cover from 300 to 350 cm. requires about three to four years in arctic waters at 6000 degree-days of below 0° C. temperatures and a loss of 30 to 50 cm. due to summer thawing."—SIPRE.

Contains an account of two expeditions in search of gold, silver and copper ores. The first in four boats ("koches") built in Mezen', was comparatively successful: the results are not known but all members returned in 1652. The following year, R. Nephtuev organized a larger expedition (83 men in seven boats) and tried to reach Novaya Zemlya from Kanin Nos, but some men and boats were lost in a storm and he was forced to winter on the shore of Yugor Strait. When the expedition was ordered to return in the summer of 1653, Nephtuev and 26 sailors were dead, and all the remaining men were stricken with scurvy. Archival documents give no further information on this ill-fated expedition.

33123. ZYKOV, I. V. Anomaliã v ledovom pokrove na r. Vym'. (Priroda, 1948, no. 1, p. 90-91) **Title tr.:** On the anomaly in the ice cover on the Vym' River.

Contains a report on conditions of the ice on the Vym', a tributary of the Vychegda, as observed during airplane flights in the winters of 1942, 1943 and 1944. Although the river was covered with solid and thick ice, a section between the mouths of Voy-Vozh and Chisva Rivers, was entirely ice-free. That part of the river was never ice-covered, the author learned from the local inhabitants. The cause of this phenomenon is suggested to be the presence of sulphur springs near the mouth (63°27' N. 51°27' E.) of the Chisva River.

33124. ZYKOV, I. V. Dikorastushchie travy i primenenie ikh v zheleznodorozhnom stroitel'stve na severe. (Priroda, 1946, no. 6, p. 67-70) **Title tr.:** Wild-growing herbs and their utilization in the railway construction.

Deals with the problem of reinforcing the slopes of embankments and excavations by planting wild-growing herbs, as carried out in 1941-43 during the construction of a railway in Pechora River region. The most important plants with strongly developed root-system are specified, such as *Epilobium angustifolium*, which was successfully used on the North Pechora railway; and their utilization is discussed.

Copy seen: DLC; MH.

33125. ZYKOV, I. V. Kiprel i ego khoziaistvennoe primeneniye na severe. (Priroda, 1946, no. 1, p. 78-80) **Title tr.:** The willow herb and its economic importance in the North.

The great willow herb or fireweed (*Chamaenerium (Epilobium) angustifolium*, is not only an excellent substitute for tea ("ivan-chai") but has a potential rôle in agriculture as an important component of ensilage. This plant, it is stressed, has wide distribution in the taiga-tundra zone (Timan and Pechora region); is a very hardy plant withstanding dry and cold weather; grows on poor soils and cannot be considered an obnoxious weed. Its introduction into culture in northern regions as green feed for livestock is recommended.

ABBREVIATIONS USED IN TITLES IN INDEX

*—basic work

&—and

Ablag.—Ablagerung (-en) - *depos-
it(s); sediment(s)*

aerol.—aerology; aerological; aero-
logische

anmärkn.—anmärkning (-en; -ar) -
remark(s); comment(s)

anteckn.—anteckning (-en; -ar) -
note(s)

antegn.—antegne (-lse) - *note(s)*

anthrop.—anthropology; anthropo-
logical; anthropologische; anthro-
pologie

antrop.—antropologiā; antropolo-
gicheskii

archäol.; Archäol.—archäologische;
Archäologie

archeol.—archeology; archeological

arkheol.—arkheologiā; arkheologi-
cheskii

astron.—astronomy; astronomical;
astronomie; astronomische; astro-
nomiska; astronomiā; astronomi-
cheskii

b.—baie; bukhta - *Bay* (in geographic
names)

B.—Bay(s) (in geographic names)

Beitr.—Beitrag; Beiträge - *contribu-
tion(s)*

Bemerk.—Bemerkung (-en) - *re-
mark(s)*

bemerkn.; bemaerkn.—bemerkning
(-er) - *observation(s); remark(s)*

Beob.—Beobachtung (-en) - *obser-
vation(s)*

berät.—berättelse - *report*

Beschreib.—Beschreibung (-en) -
description(s)

bestämn.—bestämning (-en; -ar) -
determination(s)

bibliog.—bibliography; bibliograph-
ical; bibliografiā; bibliografi-
cheskii

biol.—biology; biological; biologiā;
biologicheskii; biologi

bot.—botany; botanical; botanika;
botanicheskii; botanische; botan-
isk(a)

C.—Cape (in geographic names)

Can.—Canadian

Co., co.—Company (in firm names)

contrib.—contribution(s)

d.—der; die; das; des; dem (German
definite article); det (Danish and
Swedish)

descrip.—description(s)

distr.—distrikt

distrib.—distribution

E.—East; eastern

eksped.—ekspeditsiā - *expedition*

elektr.—elektriciteten - *electricity*

Entwickl.—Entwicklung - *develop-
ment*

Erforsch.—Erforschung (-en) - *investigation(s); research(es); discovery, discoveries*

Ergeb.—Ergebnisse - *results*

ethnograph.—ethnographische - *ethnographic*

ethnol.—ethnology

étnograf.—étnograficheskiĭ - *ethnographic*

exped.—expedition(s)

explor.—exploration(s)

f.—für - *for*

finländ.—finländische - *Finlandic*

Förbered.—Förberedelse (-erna) - *preparation(s)*

försten.; forsten.—förstening (-en; -ar); forstening (-er) - *fossil(s)*

förteckn.—förteckning - *list*

G.—Gulf (in geographic names)

g.—gora - *Mountain*

g.; gg.—god(a) - *year(s)* following dates
geog.—geography; geographical; geographische; geografiska; geografis; geograficheskiĭ

geol.—geology; geological; Geologie; geologiske; geologis; geologif; geologicheskiĭ

geomorf.—geomorfologi; geomorfologicheskiĭ - *geomorphology; geomorphological*

geomorph.—geomorphology; geomorphological

Gesell.—Gesellschaft - *Society* (in names of institutions)

gidrograf.—gidrograficheskiĭ - *hydrographic*

gidrol.—gidrologif; gidrologicheskiĭ - *hydrology; hydrological*

gidrometeorol. — gidrometeorologicheskiĭ - *hydrometeorological*

glaciol.; glaziol.—glaciologiske; glaziologiske - *glaciological*

Gt.—Great (in geographic names)

gub.—gubernif - *government district*

Halbins.—Halbinsel - *peninsula*

hist.—history; historical; historische

hydrograf.—hydrografiska; hydrographische; hydrographique(s) - *hydrographic*

hydrol.—hydrologique(s); hydrologiske - *hydrological*

I.—Island(s) (in geographic names)

iakttag. (iagttag.)—iakttagelse (-n; -r) - *observation(s)*

Ins.—Insel(n) - *Island(s)*

insaml.—insamlade - *collected*

invest.—investigation(s)

issled.; izslēd.—issledovanie; izslēdovanie - *exploration*

fūzh.—fūzhnyiĭ - *southern, or south as an adjective*

Kennt.—Kenntnis - *knowledge*

khoz.—khozŕŕstvo - *economy; establishment; farm*

khre.—khrebet - *mt. range*

L.—Lake(s); Lower (as part of geologic era); Land (in geographic names)

m.—mys - *cape*

M.—Middle (as part of geologic era)
magnēt.; magnet.—magnétisme; magnétique(s); magnetische - *magnetic*
meteorol.—meteorology; meteorological; Meteorologie; meteorologiske; meteorologiska; meteorologif; meteorologicheskiĭ

mineralog.—mineralogisk

Mitteil.—Mitteilung (-en) - *report(s)*

monograf.—monografif; monograficheskiĭ - *monograph; monographic*

Mt.—Mount

mts. (Mts.)—mountains

N.—north; northern; the North

nablŕd.—nablŕdenie (-ŕ) - *observation(s)*

naturwiss. — naturwissenschaftliche - *natural history (etc. used as adjective)*

nauch.—nauchnyiĭ - *scientific*

NE.—northeast; northeastern

nördl.—nördlich — *northern; north-
erly*
nordv.—nordvestra — *northwestern*
NW.—northwest; *northwestern*
NWT.—Northwest Territories

o.; o-va; o-ve (and other case end-
ings)—ostrov — *Island* (in geographic
names)

O.—Ocean(s)

obl.—oblast' — *region; district; territory*
observ.—observation(s); *observation*
(-en; -er); *observations*

ok.—ocean — *Ocean* (in geographic
names)

omkr.—omkring — *around; about*

opred.—opredelenie (-iā) — *determi-
nation(s)*

ornithol.—ornithology; *ornithologi-
cal; ornithologiske; ornithologique*
ornitol.—ornitologi; *ornitologisk, —
ornithology; ornithological*

o-va; o-vov; o-vakh (and other case
endings)—ostrova — *Islands* (in geo-
graphic names)

oz.—ozero — *Lake* (in geographic
names)

paleobot.—paleobotany; *paleobotan-
ical; paleobotanische*

paleogeog.—paleogeography; *paleo-
geographical; paleogeographische; paleo-
geografifiā*

paleon.—paleontology; *paleontolo-
giā; paleontologicheskii*

paleozool.—paleozoologische — *pale-
ontological*

Pen.—Peninsula

petrog.; petrograf.;—petrografiā; pet-
rograficheskii; petrografisk

petrograph.—petrographische; *Petro-
graphic*

petrol.—petrologicheskii — *petrologic*

p-ov—poluostrov — *peninsula*

phytogeog.—phytogeography; *phyto-
geographic*

Pr.—proliv (-a) — *strait(s)*

Pr.—Prince (in geographic names)

predvar.—predvaritel'nyi — *prelimi-
nary*

Prelim.—preliminary; *préliminaire(s)*

r.—reka — *river*, also *River(s)* in geo-
graphic name

R.—River(s) in geographic name

S.—south; *southern*

Sd.—Sound (in geographic names)

SE.—southeast; *southeastern*

sev. (siev.); Sev.—severnoi (siev-
nyi); *Sever — northern; the North*

sev.-vost. (siev.-vost.)—severo-vos-
tochnyi — *northeastern*

skan.—skandinavisk — *Scandinavian*

St.—Strait (in geographic names)

St. (Ste.)—Saint(e)

stratig.—stratigraphische — *strati-
graphic*

suppl.—supplement

sv. (Sv.)—sviātoī; Sviātaīā — *Saint(e)*

SW.—southwest; *southwestern*

terr. magnet.—terrestrial magnetism

topograf.—topografisk; *topografiche-
skii — topographic*

u.—und — *and*

U.—Upper (as part of geologic era)

Umgeb.—Umgebung (-en) — *environ-
ment*

unders.—undersøgelse (-r); under-
søkelse; undersökning (-en; -ar)
— *investigation(s)*

univ.—university; *Universität; uni-
versitet*

Untersuch.—Untersuchung (-en) —
investigation(s)

v.—von; vom — *from; of; by*

växtgeog.—växtgeografisk
